3907.0.8.1 Marketing Products or Services Involving a Portfolio Company

As noted above, the GLB Act prohibits any depository institution controlled by an FHC from (1) marketing or offering any product or service of a portfolio company held by the FHC under section 4(k)(4)(H) of the BHC Act or (2) allowing any product or service of the depository institution to be offered or marketed by or through any portfolio company held by the FHC under that section. A depository institution or subsidiary of a depository institution is *not* prohibited from marketing its own products or services—such as deposit, lending, and advisory products or services—to a portfolio company so long as the portfolio company does not then market those products or services to its customers or others. A depository institution subsidiary of an FHC also may purchase the products or services of a portfolio company—such as data processing hardware, software, or services to support the depository institution's own operations—provided that the institution does not, directly, indirectly, or through any arrangement, market the portfolio company's products or services to the institution's customers or others. Likewise, the cross-marketing restrictions would not prohibit a depository institution controlled by an FHC from engaging in cross-marketing activities with a company that is a co-investor with the FHC in a portfolio company, so long as those activities do not involve products or services of the portfolio company.

3907.0.9 PRESUMPTION OF CONTROL UNDER SECTIONS 23A AND 23B OF THE FRA

Sections 23A and 23B of the FRA impose specific quantitative, qualitative, and collateral requirements on certain types of transactions between an insured depository institution and its affiliates, that is, companies that are under common control with the insured depository institution. Typically, a company owned by an FHC is considered to be an affiliate of the FHC's subsidiary insured depository institution for the purposes of sections 23A and 23B, if the FHC owns or controls 25 percent or more of any class of the company's voting securities. The GLB Act, however, includes a presumption that an FHC controls a company for purposes of sections 23A and 23B if the FHC directly or indirectly, or acting through one or more other persons, owns or controls 15 percent or more of the equity capital of the company under the merchant banking authority of section 4(k)(4)(H) of the BHC Act.[21] Thus, a company is presumed to be a section 23A affiliate of a subsidiary insured depository institution of an FHC if the FHC owns or controls more than 15 percent of the total equity of the company under section 4(k)(4)(H).

An FHC can rebut the presumption by providing information to the Board demonstrating that the FHC does not control the company.[22] In the three situations identified below, the presumption of control under the GLB Act will be considered rebutted. In each situation, the FHC is assumed to own more than 15 percent of the total equity of the portfolio company under section 4(k)(4)(H) of the BHC Act (thereby triggering the statutory presumption) and less than 25 percent of any class of voting securities of the portfolio company (thereby not meeting the statutory definition of control). In particular, absent evidence to the contrary, an FHC will *not* be presumed to control a portfolio company if—

1. no officer, director, or employee of the FHC serves as a director, trustee, or general partner (or as an individual exercising similar functions) of the portfolio company;
2. a person that is not affiliated or associated with the FHC owns or controls a greater percentage of the equity capital of the portfolio company than the FHC, and no more than one officer or employee of the holding company serves as a director or trustee (or as an individual exercising similar functions) of the portfolio company; or
3. a person that is not affiliated or associated with the FHC owns or controls more than 50 percent of the voting shares of the portfolio company, and officers and employees of the FHC do not constitute a majority of the directors or trustees (or of individuals exercising similar functions) of the portfolio company.

21. Equity capital includes voting and nonvoting shares, warrants, options, and other instruments convertible into equity capital.

22. The presumption applies only when an FHC owns or controls 15 percent or more of the total equity of a portfolio company under section 4(k)(4)(H) of the BHC Act and the rule. Under existing Board precedents, an FHC may not own any shares of a company in reliance on section 4(c)(6) or (7) of the BHC Act when the company owns or controls, in the aggregate under a combination of authorities, more than 5 percent of any class of voting securities of the company.

These safe harbors do not require Board review or approval under the provisions allowing rebuttal of the presumptions. An FHC also may request the Board's approval to rebut a presumption of control under other circumstances.

The rule's presumption of control is independent from the general definition of control in section 23A of the FRA.[23] A portfolio company, under the statute, is per se a section 23A affiliate of any insured depository institution subsidiary of an FHC if the FHC owns 25 percent or more of a class of voting securities of the portfolio company, even if the FHC owns or controls less than 15 percent of the portfolio company's *total equity* or is within one of the rule's safe harbors.

For the purpose of applying the presumption of control, an FHC that has an investment in a private equity fund will not be considered to indirectly own the equity capital of a portfolio company held by the fund *unless* the FHC controls the private equity fund. For example, if an FHC has a noncontrolling investment in a private equity fund that, in turn, owns 20 percent of the total equity of a portfolio company, the portfolio company is not presumed to be an affiliate of the insured depository institution subsidiaries of the FHC. On the other hand, if an FHC acts as general partner of a private equity fund and thus controls the fund, and if the private equity fund owns or controls more than 15 percent of the total equity of any portfolio company, the portfolio company is presumed to be an affiliate of the insured depository institution subsidiaries of the FHC.

To ensure competitive equity, the Board's rule applies sections 23A and 23B of the FRA to covered transactions between a U.S. branch or agency of a foreign bank and (1) any portfolio company controlled by the foreign bank or an affiliate of the foreign bank under the merchant banking authority of section 4(k)(4)(H) of the BHC Act, and (2) any company controlled by the foreign bank or an affiliate if the company is engaged in making MBIs under section 4(k)(4)(H) and the proceeds of the covered transaction are used for the purpose of funding the company's merchant banking activities. In determining if a portfolio company is controlled by a foreign bank or an affiliate of a foreign bank for these purposes, the rebuttable presumption of control and the three safe harbors discussed above apply to the foreign bank and affiliate in the same manner that the presumption and safe harbors apply to domestic FHCs. The rule does not restrict lending by a foreign bank's U.S. branches and agencies to parent companies or other affiliated companies unless the proceeds of such lending would be used by these companies to make or fund the making of MBIs.

23. See 12 U.S.C. 371c(3)(A).

Investments in the equity of nonfinancial companies[1] as well as lending to private-equity-financed companies have emerged as important sources for earnings and business relationships at a number of banking organizations (BOs).[2] These equity investments in nonfinancial companies, however, can entail significant market, liquidity, and other risks. Equity investments can also give rise to increased volatility of both earnings and capital. Accordingly, sound investment and risk-management practices and strong capital positions are critical when conducting these activities.

In June 2000, the Board issued supervisory guidance on various sound practices related to the equity investment activities of B0s; this guidance merits the attention of management, examiners, and other supervisory staff. The guidance applies to the equity investment activities of financial holding companies (FHCs), bank holding companies (BHCs), state member banks, and their affiliates, regardless of the authority under which the investments are made. The major elements of this guidance, equity investments and the provision of traditional credit-based services to equity-funded companies, are highlighted below. For a more complete discussion, see SR-00-9.

3909.0.1 LEGAL AND REGULATORY AUTHORITY FOR EQUITY INVESTMENTS

FHCs, BHCs, and depository institutions are able to make equity investments under several statutory and regulatory authorities. Under section 4(c)(6) and (7) of the Bank Holding Company Act (BHC Act), BHCs may make passive investments in up to 5 percent of the outstanding voting shares of any company and up to 25 percent of the total equity of the company. Under this authority, there is no aggregate limit on the total dollar amount of equity investments that a BHC may hold.

BOs can make equity investments through a small business investment corporation (SBIC), which can be a subsidiary of a bank or BHC. Investments made by SBIC subsidiaries are allowed up to a total of 50 percent of a portfolio company's outstanding shares, but can only be made in companies defined as a small business, according to SBIC rules. A bank's aggregate investment in the stock of SBICs is limited to 5 percent of the bank's capital and surplus. In the case of BHCs, the aggregate investment is limited to 5 percent of the BHC's proportionate interest in the capital and surplus of its subsidiary banks.

Under Regulation K, which implements sections 25 and 25A of the Federal Reserve Act (FRA) and section 4(c)(13) of the BHC Act, BOs may, with Board approval, make portfolio investments in foreign companies that in the aggregate do not exceed 25 percent of the tier 1 capital of the BHC. In addition, individual investments must be less than 20 percent of a portfolio company's voting shares and must not exceed 40 percent of the portfolio company's total equity.[3]

FHCs are also permitted to acquire any amount of the shares, assets, or ownership interests of a nonfinancial company under the merchant banking investment authority of section 4(k)(4)(H) of the BHC Act, as amended by the Gram-Leach-Bliley Act (GLB Act). The GLB Act places certain limits on the holding period of merchant banking investments and on the ability of an FHC to routinely manage or operate a portfolio company held as a merchant banking investment. Subpart J of the Board's Regulation Y (12 C.F.R. 225.170–225.177) implements these and other restrictions applicable to merchant banking investments.

Equity investments made under any of the authorities described above may be in publicly

1. Unless otherwise noted, references to equity investments in this guidance are references to equity investments in nonfinancial companies. Nonfinancial companies include companies that engage in activities other than financial activities that a financial holding company may conduct pursuant to section 4 of the Bank Holding Company Act (12 U.S.C. 1843), as amended by the Gramm-Leach-Bliley Act, and the regulations and interpretations thereunder. Equity investments include merchant banking investments made by financial holding companies under the regulations adopted by the Board of Governors (12 C.F.R. 225, subpart J, sections 225.170 through 225.177) and the Treasury Department (12 C.F.R., chapter XV, part 1500, sections 1500.1 through 1500.8) that became effective on February 15, 2001.

2. The term ''private equity,'' as used in this guidance, refers to shared-risk investments outside of publicly quoted securities and also activities such as venture capital, leveraged buyouts, mezzanine financing, and holdings of publicly quoted securities obtained through these activities.

3. Also included in calculating a BO's investment are shares of the corporation held in trading or dealing accounts or under any other authority. The 25 percent of tier 1 capital limitation increases to 100 percent of tier 1 capital for certain non-BHC investors. See Regulation K for more detailed information.

traded securities or privately held equity interests. The investment may be made as a direct investment in a specific portfolio company, or it may be made indirectly through a pooled investment vehicle, such as a private equity fund. In general, private equity funds are investment companies, typically organized as limited partnerships, that pool capital from third-party investors to invest in shares, assets, and ownership interests in companies for resale or other disposition.[4] Private equity fund investments may provide seed or early-stage investment funds to start-up companies, or they may finance changes in ownership, middle-market business expansions, and mergers and acquisitions.

The supervisory guidance applies to all equity investments a BHC or FHC holds in nonfinancial companies, public or private, regardless of the authority under which such investments are made. FHCs and BHCs are expected to control aggregate risk exposures on a consolidated basis, while recognizing legal distinctions and possible obstacles to cash movements among subsidiaries and affiliates. Also, the basic principles set forth in this guidance should be incorporated into the U.S. operations of foreign BOs, with appropriate adaptations to reflect the fact that (1) those operations are an integral part of a foreign bank, which should be managing its risks on a consolidated basis, and (2) the foreign bank is subject to overall supervision by its home authorities.

3909.0.2 SOUND PRACTICES FOR EQUITY INVESTMENTS

High returns in both equity investments and lending to private-equity-financed companies can spur an increased flow of funds into this market segment. As in other rapidly expanding and highly profitable business lines, business and competitive pressures can lead to compromises in due diligence, the use of overly optimistic assumptions, and breakdowns in internal controls. Sound investment and risk-management practices are crucial to the success of equity investment activities. As with any financial activity, sound management practices for these activities involve—

1. active involvement and oversight by the board of directors and senior management;
2. appropriate policies, limits, procedures, and management information systems that govern all elements of the investment decision-making and management process; and
3. adequate internal controls.

As with all financial activities, institutions should ensure that they have sufficient capital for conducting equity investment activities. BOs that are conducting material equity investment activities are expected to have an internal capital-allocation system that meaningfully links the identification, monitoring, and evaluation of the risks of the institution's equity investment activities to the determination of its needs for economic capital. (See SR-99-18.) A review of these systems should be an important part of the investment-management process, as well as an integral element of ongoing supervisory review and monitoring of this business line. The federal banking agencies have recognized that equity investment activities entail greater risks than traditional banking activities, and they have requested comment on proposed amendments to their regulatory capital guidelines that would establish special capital requirements for equity investments.[5]

Supervisory approach. Examiners and other supervisors (and a BO's management) should review each of the three areas listed above to identify any deficiencies in the management of FHCs and BHCs. The supervisory efforts should be targeted appropriately in accordance with Federal Reserve policies on risk-focused supervision, taking into account both (1) the findings of internal audit and other independent reviews and (2) the materiality of equity investment activities to the banking organization. Consistent with the Federal Reserve's role as umbrella supervisor, reviews of the merchant banking activities of FHCs and the equity investment activities of BHCs should focus on the potential exposure these activities may pose to insured depository affiliates and should, where appropriate and available, use the findings of primary bank supervisors and functional regulators of holding company affiliates. At the same time, supervisory and examination staff should ensure that they continue to conduct sufficient and targeted transaction testing across legal-entity lines if necessary to fully assess the adequacy of business-line risk management. Transaction testing should be consistent with the risk profile of the institution and the materiality of the activity to the institution's financial condition.

4. For a detailed definition of "private equity funds," see the merchant banking rule (12 C.F.R. 225.170 et seq.).

5. See 66 *Federal Register* 10, 212 (Feb. 14, 2001).

3909.0.2.1 Oversight by the Board of Directors and Senior Management

Equity investment activities require the active oversight of the board of directors and senior management of the institution that is conducting the activities. The board should approve portfolio objectives, overall investment strategies, and general investment policies that are consistent with the institution's financial condition, risk profile, and risk tolerance. Portfolio objectives should address the types of investments, expected business returns, desired holding periods, diversification parameters, and other elements of sound investment-management oversight. Board-approved objectives, strategies, policies, and procedures should be documented and clearly communicated to all the personnel involved in their implementation. The board should actively monitor the performance and risk profile of equity investment business lines in light of the established objectives, strategies, and policies.

The board of directors should also ensure that there is an effective management structure for conducting the institution's equity activities, including adequate systems for measuring, monitoring, controlling, and reporting on the risks of equity investments. The board should approve policies that specify lines of authority and responsibility for both acquisitions and sales of investments. The board should also approve limits on aggregate investment and exposure amounts, the types of investments (for example, direct and indirect, mezzanine financing, start-ups, or seed financing) and appropriate diversification-related aspects of equity investments such as industry, sector, and geographic concentrations.

For its part, senior management must ensure that adequate policies, procedures, and management information systems are in place for managing equity investment activities on a day-to-day and longer-term basis. Management should set clear lines of authority and responsibility for making and monitoring investments and for managing risk. Management should ensure that competent staff conduct the institution's equity investment activities. The staff's technical knowledge and experience should be consistent with the scope of the institution's activities.

3909.0.2.2 Management of the Investment Process

Institutions engaging in equity investment activities should have a sound process for executing all elements of investment management, including initial due diligence, periodic reviews of holdings, investment valuation, and realization of returns. This process requires appropriate policies, procedures, and management information systems, the formality of which should be commensurate with the scope, complexity, and nature of an institution's equity investment activities. A sound investment process should be applied to all equity investment activities, regardless of the legal entity in which investments are booked.

Supervisory approach. Any supervisory reviews of equity investment activities should be risk-focused. The review should take into account the institution's stated tolerance for risk, the ability of senior management to govern these activities effectively, the materiality of activities in light of the institution's risk profile, and its capital position.

3909.0.2.2.1 Equity Investment Policies and Limits

Institutions engaging in equity investment activities require effective policies that—

1. govern the types and amounts of investments that may be made,
2. provide guidelines on appropriate holding periods for different types of investments, and
3. establish parameters for portfolio diversification.

Investment strategies and permissible types of investments should be clearly identified. Portfolio-diversification policies should identify factors pertinent to the risk profile of the investments being made, such as industry, sector, geographic, and market factors. Policies establishing expected holding periods should specify the general criteria for liquidation of investments, as well as guidelines for the divestiture of underperforming investments. Decisions to liquidate underperforming investments are necessarily made on a case-by-case basis, considering all relevant factors. However, policies and procedures that stipulate more frequent review and analysis are generally used to address investments that are performing poorly or that have been in portfolio for a considerable length of time.

Policies should identify the aggregate exposure that the institution is willing to accept by the type and nature of investment (for example, direct or indirect, industry sectors). When adhering to those limits, institutions should consider unfunded and funded commitments. Where hedging activities are conducted, formal and clearly articulated hedging policies and strategies should identify limits on hedged exposures and permissible hedging instruments.

Management and staff compensation play a critical role in providing incentives and controlling risks within a private equity business line. Clear policies should govern compensation arrangements, including co-investment structures and sales of portfolio company interests by employees of the BO.

3909.0.2.2.2 Equity Investment Procedures

As they do with investment policies, many institutions have different procedures for assessing, approving, and reviewing investments based on their size, nature, and risk profile. Often, procedures used for direct investments are different than those used for indirect investments made through private equity funds. For example, different levels of due diligence and senior management approvals may be required. The management infrastructures that have been constructed for conducting these activities should ensure that operating procedures and internal controls appropriately reflect the diversity of investments.

Supervisory approach. Supervisors should recognize the potential diversity of practice when conducting reviews of the equity investment process. They should focus on the appropriateness of the process employed relative to the risk of the investments made and the materiality of this business line to the overall soundness of the BO and the potential impact on affiliated depository institutions.

3909.0.2.2.2.1 Investment Analysis and Approvals

Well-founded analytical assessments of investment opportunities and formal processes for approving investments are critical in conducting equity investment activities. While analyses and approval processes may differ by individual investments and across institutions, the methods and types of analyses conducted should be appropriately structured to adequately assess the specific risk profile, industry dynamics, management, and specific terms and conditions of the investment opportunity, as well as other relevant factors. All elements of the analytical and approval processes, from initial review through the formal investment decision, should be documented and clearly understood by the staff who are conducting these activities. An institution's evaluation of potential investments in private equity funds, as well as its reviews of existing fund investments, should assess the adequacy of a fund's structure, with due consideration given to the following:

1. management fees
2. carried interest[6] and its computation on an aggregate portfolio basis
3. the sufficiency of the general partners' capital commitments in providing management incentives
4. contingent liabilities of the general partner
5. distribution policies and wind-down provisions
6. performance benchmarks and return-calculation methodologies

3909.0.2.2.2.2 Investment-Risk Ratings

It is a sound practice to establish a system of internal risk-ratings for equity investments. The system should assign each investment a rating based on factors such as the nature of the company, strength of management, industry dynamics, financial condition, operating results, expected exit strategies, market conditions, and other pertinent factors. Different rating factors may be appropriate for indirect investments and direct investments. For example, rating factors for investments in private equity funds could include an assessment of the fund's diversification, management experience, liquidity, and actual and expected performance. Rating systems should be used for assessments of both new investment opportunities and existing portfolio investments.

3909.0.2.2.2.3 Periodic Reviews

Management should ensure the periodic and timely review of the institution's equity investments. Reviews should be conducted at both

6. The carried interest is the share of a partnership's return that is received by general partners or investment advisers.

individual investment and portfolio levels. Depending on the size, complexity, and risk profile of the investment, reviews should, where appropriate, include factors such as—

1. the history of the investment, including the total funds approved;
2. commitment amounts, principal-cash-investment amounts, cost basis, carrying value, major-investment cash flows, and supporting information, including valuation rationales and methodologies;
3. the current actual percentage of ownership in the portfolio company on both a diluted and undiluted basis;
4. a summary of recent events and current outlook;
5. the recent financial performance of portfolio companies, including summary compilations of performance and forecasts, historical financial results, current and future plans, key performance metrics, and other relevant items;
6. internal investment-risk ratings and rating-change triggers;
7. exit strategies, both primary and contingent, and expected internal rates of return on exit; and
8. other pertinent information for assessing the appropriateness, performance, and expected returns of investments.

Portfolio reviews should include an aggregation of individual investment-risk and performance ratings; an analysis of appropriate industry, sector, geographic, and other pertinent concentrations, and total portfolio valuations. Portfolio reports containing the cost basis, carrying values, estimated fair values, valuation discounts, and other factors summarizing the status of individual investments are integral tools for conducting effective portfolio reviews. Reports containing the results of all reviews should be available to supervisors for their inspection.

Given the inherent uncertainties in equity investment activities, institutions should include in their periodic review consideration of best case, worst case, and probable case assessments of investment performance. The reviews should evaluate changes in market conditions and alternative assumptions used to value investments—including expected and contingent exit strategies. Major assumptions used in valuing investments and forecasting performance should be identified. The assessments need not be confined to quantitative analyses of potential losses, but may also include qualitative analyses. The formality and sophistication of investment reviews should be appropriate for the overall level of risk the BO incurs from this business line.

3909.0.2.2.2.4 Valuation and Accounting

Valuation and accounting policies and procedures can have a significant impact on the earnings of institutions engaged in equity investment activities. Many equity investments are made in privately held companies, for which independent price quotations are either unavailable or not available in sufficient volume to provide meaningful liquidity or a market valuation. Valuations of some equity investments may involve a high degree of judgment on the part of management or require the skillful use of peer comparisons. Similar circumstances may exist for publicly traded securities that are thinly traded or subject to resale and holding-period restrictions, or when the institution holds a significant block of a company's shares. Accordingly, clearly articulated policies and procedures on the accounting and valuation methodologies used for equity investments are of paramount importance.

Several methods are used in accounting for equity investments. Under generally accepted accounting principles (GAAP), equity investments held by investment companies, held by broker-dealers, or maintained in the trading account[7] are reported at fair value, with any unrealized appreciation or depreciation included in earnings and flowing to tier 1 capital. For some holdings, fair value may reflect adjustments for liquidity and other factors.

Equity investments not held in investment companies, by broker-dealers, or in the trading account and that have a readily determinable fair value (quoted market price) are generally reported as available-for-sale (AFS). They are marked to market with unrealized appreciation or depreciation recognized in GAAP-defined "comprehensive income," but not earnings. Appreciation or depreciation flows to equity but, for regulatory capital purposes only, depreciation is included in tier 1 capital.[8] Equity investments without readily determinable fair

7. Equity investments in nonfinancial companies held under the authorities discussed previously would not normally be held in the trading account, as they are not intended to be traded actively.

8. Under regulatory capital rules, tier 2 capital may include up to 45 percent of the unrealized appreciation of AFS equity investments with readily determinable fair values.

values generally are held at cost, subject to write-downs due to impairments in the value of the asset. As is the case with all assets, impairments in value should be promptly addressed. Institutions should ensure that they have taken write-downs in a timely manner and in an appropriate amount.

In determining fair value, the valuation methodology is critical. Clearly articulated methods for valuing investments are critical to the effective management of equity investments. Formal valuation and accounting policies should be established for investments in public companies; direct private investments; indirect fund investments; and, where appropriate, other types of investments with special characteristics. In establishing valuation policies, institutions should consider market conditions, taking account of lockout provisions, the restrictions of Securities and Exchange Commission Rule 144, liquidity features, the dilutive effects of warrants and options, and industry characteristics and dynamics.

For institutions acting as general partners of private equity funds, ''clawback,'' or ''lookback,'' provisions of partnership agreements can pose additional challenges when accounting for and valuing the distributions received from funds managed by the institution. Clawback provisions are promises general partners make to repay limited partners at the end of the term of a fund, if the general partner has received more than its contractually defined compensation or ''carried interest'' over the life of the fund. Clawback provisions can come into play when the liquidation and associated disposition of both limited-partner and general-partner returns on well-performing investments in a fund occur before the liquidation of poorer-performing investments. Often, escrow accounts are established to hold a portion of the general partners' carried interest during the life of the fund. When applicable, institutions should appropriately recognize the estimated impact of these provisions in accounting for and valuing general-partner activities, including the earnings derived from those activities.

The accounting and valuation of equity investments should be subject to regular periodic reviews. In all cases, valuation reviews should produce documented audit trails that are available to supervisors and auditors. These reviews should assess the consistency of the methodologies used to estimate fair value.

Accounting and valuation treatments should be assessed in light of their potential for abuse through the inappropriate management or manipulation of reported earnings on equity investments. For example, high valuations may produce overstatements of earnings through gains and losses on investments reported at ''fair value.'' On the other hand, inappropriately understated valuations can be vehicles for ''smoothing earnings'' by recognizing gains on profitable investments when an institution's earnings are otherwise under stress. While reasonable people may disagree on the valuations given to illiquid private equity investments, institutions should have rigorous valuation procedures that are applied consistently.

Given the uncertainties in valuation methodologies and the relatively high volatility of the equity market, equity investments that are reported at fair value can contribute to earnings volatility in the institutions where they play a major role. Equity investments are increasingly contributing to the earnings of some BOs. Therefore, the potential impact of these investments on the composition, quality, and sustainability of overall earnings should be appropriately recognized and assessed by both management and supervisors.

3909.0.2.2.2.5 Exit Strategies

Returns and reported earnings on equity investments are highly affected by assumed and actual exit strategies. The principal means of exiting an equity investment in a privately held company include initial public stock offerings, sales to other investors, and share repurchases. An institution's assumptions regarding exit strategies can significantly affect the valuation of the investment. The importance of reasonable and comprehensive primary and contingent take-out strategies for equity investments should be emphasized. Management should periodically review investment exit strategies, particularly focusing on larger or less liquid investments.

3909.0.2.2.2.6 Disposition of Investments

Policies and procedures should be established to govern the sale, exchange, transfer, or other disposition of the institution's investments. These policies and procedures should state clearly the levels of management or board approval required for the disposition of investments, and, in the case of investments held under the merchant banking provisions of the GLB Act, should take into account and comply with the time limits for holding merchant banking investments.[9]

3909.0.2.2.2.7 Capital

Given the potential volatility of returns on equity investments, the risks associated with private equity investment and merchant banking business lines can exceed those of many more traditional banking activities. BOs that are conducting material equity investment activities should have internal methods for allocating economic capital based on the risk inherent in those activities.[10] These methods should identify all material risks and their potential impact on the safety and soundness of the institution. The amount and percentage of capital that is dedicated to this business line should be appropriate to the size, complexity, and financial condition of the BO. Organizations substantially engaged in equity investment and merchant banking activities should have strong capital positions supporting their equity investments, and they should allocate economic capital to them that is well in excess of the current regulatory minimums applied to lending activities.

Supervisory approach. Assessments of capital adequacy (by supervisors and the BO's management) should include not only the institution's compliance with regulatory capital requirements and the quality of regulatory capital, but also its methodologies for internally allocating economic capital to this business line.

3909.0.2.3 Internal Controls

An adequate system of internal controls, with appropriate checks and balances and clear audit trails, is critical to conducting equity investment activities effectively. Appropriate internal controls should address all of the elements of the investment-management process, and they should focus on the appropriateness of existing policies and procedures; adherence to policies and procedures; and the integrity and adequacy of investment valuations, risk identification, regulatory compliance, and management reporting. Departures from policies and procedures should be documented and reviewed by senior management. This documentation should be available for examiner review.

Assessments of an institution's compliance with both written and implied policies and procedures should be independent of line decision-making functions to the fullest extent possible. Large complex banking institutions with material equity investment activities should have internal auditors or independent outside parties conduct periodic independent reviews of their investment process and valuation methodologies. In smaller, less complex institutions, where limited resources may preclude independent review, alternative checks and balances should be established. These checks and balances may include random internal audits, reviews by senior management who are independent of the function, or the use of outside third parties.

3909.0.2.3.1 Documentation of the Investment Process

Documentation of key elements of the investment process, including initial due diligence, approval reviews, valuations, and dispositions, is an integral part of any private equity investment internal-control system. Accordingly, institutions should appropriately document their policies, procedures, and investment activities, and they should make this documentation accessible to supervisors.

Institutions should be aware that the statutory and regulatory authority under which some equity investment activities are conducted may impose specific documentation and recordkeeping requirements. For example, merchant banking regulations require an FHC to maintain a written record any time it becomes involved in the routine management or operation of a portfolio company and to notify the Board if it routinely manages or operates a portfolio company for more than nine months.

Supervisory approach. Review the documentation of the internal controls over the key elements of the equity investment process. If senior management has authorized and reviewed any departures from policies and procedures, review the documentation for those departures.

3909.0.2.3.2 Legal Compliance

Compliance with all federal laws and regulations that are applicable to the institution's investment activities should be a focus of an

9. See 12 C.F.R. 225.172.
10. The internal methods for allocating economic capital should be consistent with the general guidance in SR-99-18.

institution's system of internal controls. Regulatory compliance requirements, in particular, should be incorporated into internal controls so managers outside of the compliance or legal functions understand the parameters of permissible investment activities.

It is important to recognize that private equity and merchant banking activities are subject to different laws and regulations, depending on the authority under which the activities are conducted. For example, the merchant banking investments an FHC makes are subject to holding-period limits and restrictions on the FHC's involvement in the routine management or operation of the portfolio company. Accordingly, management should have a system in place, consistent with applicable laws and regulations, to ensure that impermissible control is not exercised over portfolio companies held under this authority and that merchant banking investments are disposed of within the time periods required by the rule. Limiting involvement in the portfolio company's day-to-day management and operation is also important to protect the institution from lender-liability claims.

Likewise, certain cross-marketing restrictions apply to subsidiary depository institutions of FHCs and to portfolio companies controlled by the FHC under statutory merchant banking authority. Management should ensure that these limits are observed. When a banking organization owns or controls a significant percentage of a company's voting securities, the company may be an affiliate of the organization's depository institution subsidiaries for the purposes of the affiliate transaction limits of sections 23A and 23B of the FRA. Also, the section 23A and 23B limitations on transactions between a depository institution and its affiliates are presumed by the GLB Act to apply to certain transactions between a depository institution subsidiary of an FHC and any portfolio company in which the FHC owns at least a 15 percent equity interest under the merchant banking authority. This ownership threshold is lower than the ordinary definition of an affiliate for section 23A purposes, which is typically 25 percent.

Moreover, to ensure compliance with federal securities laws, institutions should establish policies, procedures, and other controls addressing insider trading. A restricted list of securities for which the institution has inside information is one widely used mechanism for controlling the risk of insider trading. In addition, the institution should have control procedures in place to ensure that appropriate reports are filed with functional regulators.

3909.0.2.3.3 Compensation

Often, key employees in the private equity investment units of BOs may co-invest in the direct or fund investments made by the unit. The return on this co-investment, which the FHC may underwrite, may constitute a significant portion of the compensation of these employees. These co-investment arrangements can be an important incentive mechanism and risk-control technique and can help to attract and retain qualified management. However, "cherry picking," or selecting only certain investments for employee participation while excluding others, should be discouraged.

In many cases, the employees' co-investment may be funded through loans from affiliates of the BO, which, in turn, hold a lien against the employees' interests. The administration of the compensation plan should be appropriately governed pursuant to formal agreements, policies, and procedures. Among other matters, policies and procedures should address the terms and conditions of employee loans and sales of participants' interests before the release of the lien.

3909.0.3 DISCLOSURE OF EQUITY INVESTMENT ACTIVITIES

Given the important role that market discipline plays in controlling risk, institutions should ensure that they adequately disclose the information necessary for the markets to assess the institution's risk profiles and performance in the equity investment business line. Indeed, it is in the institution's interest, as well as that of its creditors and shareholders, to disclose publicly information about earnings and risk profiles. Institutions are encouraged to disclose in public filings information on the type and nature of investments, portfolio concentrations, returns, and their contributions to reported earnings and capital. The following topics are relevant for public disclosure, though disclosures of each of these topics may not be appropriate, relevant, or sufficient in every case:

1. the size of the portfolio
2. the types and nature of investments (for example, direct or indirect, domestic or international, public or private, equity or debt with conversion rights)

3. the initial cost, carrying value, and fair value of investments, and, where applicable, comparisons to publicly quoted share values of portfolio companies
4. the accounting techniques and valuation methodologies, including key assumptions and practices affecting valuation and changes in those practices
5. the realized gains (or losses) arising from sales and unrealized gains (or losses)
6. insights regarding the potential performance of equity investments under alternative market conditions

Supervisory approach. Supervisors should fully use the disclosures in public filings, as well as the periodic regulatory reports filed by publicly held BOs, as part of the information that they review routinely. Supervisors should encourage BOs to make adequate disclosures or to improve their public disclosures of equity investment and merchant banking activities (these disclosures should include the items listed above).

3909.0.4 INSTITUTIONS LENDING TO OR ENGAGING IN OTHER TRANSACTIONS WITH PORTFOLIO COMPANIES

Additional risk-management issues may arise when a banking institution or an affiliate lends to or has other business relationships with (1) a company in which the banking institution or an affiliate has invested (that is, a portfolio company); (2) the general partner or manager of a private equity fund that has also invested in a portfolio company; or (3) a private-equity-financed company in which the banking institution does not hold a direct or indirect ownership interest, but which is an investment or portfolio company of a general partner or fund manager with which the BO has other investments. Given the potentially higher than normal risk attributes of these lending relationships, institutions should devote special attention to ensuring that the terms and conditions of these relationships are at arm's length and are consistent with the lending policies and procedures of the institution. Similar issues may arise in the context of derivatives transactions with or guaranteed by portfolio companies and general partners.

Lending and other business transactions between an insured depository institution and a portfolio company that meets the definition of an affiliate must be negotiated on an arm's-length basis, in accordance with section 23B of the FRA. The holding company also should have systems and policies in place to monitor transactions between the holding company, or a nondepository institution subsidiary of the holding company, and a portfolio company. (These transactions are not typically governed by section 23B.) A holding company should ensure that the risks of these transactions, including exposures of the holding company on a consolidated basis to a single portfolio company, are reasonably limited and that all transactions are on reasonable terms. Special attention should be paid to transactions that are not on market terms.

A BO may lend to a private-equity-financed company in which it has no equity interest. When the borrowing company is a portfolio investment of private equity fund managers or general partners with which the institution may have other private-equity-related relationships, the extension of credit should be conducted on reasonable terms. In some cases, supervisors have found that lenders may wrongly assume that the general partners or another third party implicitly guarantees or stands behind such credits. Reliance on implicit guarantees or comfort letters should not substitute for reliance on a sound borrower that is expected to service its debt with its own resources. As with any type of credit extension, absent a written contractual guarantee, the credit quality of a private equity fund manager, general partner, or other third party should not be used to upgrade the internal credit-risk rating of the borrower company or to prevent the classification or special mention of a loan. Any tendency to relax this requirement when the general partners or sponsors of private-equity-financed companies have significant business dealings with the BO should be strictly avoided.

When an institution lends to a portfolio company in which it has a direct or indirect interest, implications arise under sections 23A and 23B of the FRA, which govern credit-related transactions and asset purchases between a depository institution and its affiliates. Section 23A applies to transactions between a depository institution and any company when the institution's holding company or shareholders own at least 25 percent of the company's voting shares. The GLB Act extends this coverage by establishing a presumption that a portfolio company is an affiliate of a depository institution subsidiary of an FHC if the FHC uses the merchant banking authority of the GLB Act to own or control more than 15 percent of the total equity of the company. Institutions should obtain the assistance of counsel to determine whether such issues exist or would exist if loans were extended to a portfolio company, general partner, or manager.

In addition to limiting and monitoring the exposure to portfolio companies that arises from traditional banking transactions, BHCs should adopt policies and practices that limit their legal liability, and that of their affiliates, for the financial obligations and liabilities of portfolio companies. These policies and practices include, for example, the use of limited-liability corporations or special-purpose vehicles to hold certain types of investments, the insertion of corporations that insulate liability between the BHC and a partnership controlled by the BHC, and contractual limits on liability. BHCs that extend credit to companies in which the BHC has made an equity investment should also be aware of the potential for equitable subordination of the lending arrangements.

Supervisory approach. Supervisors should ensure that the institution has conducted a proper review of section 23A and 23B compliance issues to avoid violations of law or regulations. Ascertain that internal controls limit and monitor the exposures to portfolio companies in which the institution has a direct or indirect interest. Determine if the BHC has adopted policies and practices that limit its legal liability and that of its affiliates for the financial obligations and liabilities of the portfolio companies.

3909.0.5 SUPERVISORY OBJECTIVES

1. To ensure that any risk assessment, supervisory strategies, and on-site and targeted reviews of the banking organization adequately and appropriately consider its equity investment and merchant banking activities.
2. To ascertain that the board of directors and senior management are taking the necessary actions to ensure that the risks associated with private equity investments and merchant banking activities are properly identified and managed, and that these activities do not adversely affect the soundness of the banking organization and its affiliated federally insured depository institutions.
3. To encourage the banking organization's board of directors and management to make the necessary and adequate public disclosures of its equity investment activities.
4. When the banking organization is engaged in material equity investment and merchant banking activities, to ascertain (1) that the board of directors and management have taken the necessary actions to ensure that the organization has a strong capital position that is adequate to support its activities, and (2) that the banking organization has robust internal methods for allocating capital that fully reflect the inherent risks of those activities.
5. To assess the existence, adequacy, maintenance, and documentation of the institution's system of internal controls over the key elements of the equity investment and merchant banking process.
6. To review compliance with limits on transactions governed by sections 23A and 23B of the FRA.

3909.0.6 SUPERVISORY PROCEDURES

1. Identify the organization's deficiencies and the material risks that are involved in the management of its equity investment and merchant banking activities. Also identify those activities that pose potential risks to the financial condition of state member banks and other federally insured depository institutions affiliated with FHCs and BHCs. Fully use the findings of primary bank supervisors and the functional regulators of holding company affiliates to review and assess the potential risks of the equity investment activities.
2. Assess the ability of senior management to govern equity investment activities effectively, particularly the—
   a. involvement and oversight by the board of directors and senior management;
   b. implementation and maintenance of appropriate policies, limits, procedures, and management information systems; and
   c. system of internal controls.
3. Target supervisory efforts to assess the compliance of the board of directors and management with the Federal Reserve's risk-focused management and supervision policies, considering—
   a. the BO's stated tolerance for risk,
   b. the findings of internal audit and other independent reviews, and
   c. the materiality of the activities, considering the BO's risk profile.

4. Focus and assess the impact of the equity investment activities on insured depository affiliates, considering the potential risks and returns associated with the activities and the potential volatility in some segments of the equity markets.
5. Conduct sufficient, targeted transaction testing across legal-entity lines, if necessary, to fully assess the adequacy of risk management in the equity investment business lines. The transaction testing should be consistent with the institution's risk profile, the materiality of the business line's activity, and the overall soundness of the BO's financial condition.
6. Assess the adequacy and quality of the BO's capital position in relation to the risk that is associated with its equity investment activities and the potential impact on affiliated depository institutions. If the organization is substantially engaged in equity investment activities, determine that it has a strong capital position with capital backing that is well above regulatory minimums for traditional banking activities. Also evaluate the adequacy and quality of the methods used to internally allocate economic capital to the business line (or lines) involving equity investment activities.
7. Recognize, as a supervisor, that many institutions have diverse practices and procedures for assessing, approving, and reviewing investments based on the size, nature, and risk profile of an investment. Focus on and assess the appropriateness, adequacy, and quality of the process employed relative to the—
   a. risk of the investments made,
   b. materiality of this business line in relation to the overall soundness of the BO, and
   c. the potential impact on affiliated depository institutions.
8. Review and determine the adequacy of senior management's documentation of the internal controls over the key elements of the equity investment process, including its documentation for any authorized departures from any of these controls.
9. Use the disclosures the institution has made in public filings and period regulatory reports, and review and assess their adequacy and quality. Encourage the BO to improve any deficient public disclosures involving equity investment and merchant banking activities.
10. Ascertain that—
    a. the institution maintains and monitors proper internal controls, and that it conducts adequate periodic reviews of the controls to ensure its and its affiliate's compliance with sections 23A and 23B of the FRA;
    b. the internal controls are designed to limit and monitor the institution's exposure to portfolio companies in which it has a direct or indirect ownership interest; and
    c. the BHC has adopted policies and practices that limit its legal liability and that of its affiliates for the financial obligations of the portfolio companies.
11. Communicate to the management of the banking organization and other appropriate supervisors any concerns about deficiencies found in reviewing equity investment and merchant banking activities.

A finder brings together one or more buyers and sellers of any product or service for transactions that the parties themselves negotiate and consummate. National banks and state banks have been permitted to act and have acted as a finder in nonfinancial transactions for many years. Banking organizations have served as a finder by providing enclosures (or "statement stuffers") and other marketing materials from sellers of various products and services. Banking organizations have also helped to identify service providers as an accommodation to their customers. Financial holding companies (FHCs) have argued that acting as a finder, particularly in an electronic form, offers them increased opportunities to cross-sell financial products and services or to enhance the attractiveness of their electronic web site to customers. BHCs and foreign banks that qualify as FHCs may engage in finder activities (as authorized by section 225.86(d)(1) of Regulation Y) by providing the post-transaction notice stipulated in section 225.87(a) of Regulation Y.

An FHC may act as a finder for financial and nonfinancial products or services.[1] A finder includes providing any or all of the following services:

1. identifying potential parties, making inquiries as to their interest, introducing and referring potential parties to each other, and arranging contacts between and meetings of interested parties
2. conveying between interested parties expressions of interest, bids, offers, orders, and confirmations relating to a transaction
3. transmitting information concerning products and services to potential parties in connection with the activities described in this section

Some examples of finder services that may be provided by a finder, in accordance with section 225.86(d) of the rule, include—

1. hosting an electronic marketplace on the FHC's Internet web site by providing hypertext or similar links to the web sites of third-party buyers or sellers;
2. hosting, on the FHC's servers, the Internet web site of—
   - a buyer (or seller) that provides information concerning the buyer (or seller) and the products or services it seeks to buy (or sell) and allows sellers (or buyers) to submit expressions of interest, bids, offers, orders, and confirmations relating to those products or services; or
   - a government or government agency that provides information concerning its services or benefits, assists persons in completing applications to receive such government or agency services or benefits, and allows persons to transmit their applications for services or benefits to the government or agency;
3. operating an Internet web site that allows multiple buyers and sellers to (1) exchange information concerning the products and services that they are willing to purchase or sell, (2) locate potential counterparties for transactions, (3) aggregate orders for goods or services with those made by other parties, and (4) enter into transactions between themselves; or
4. operating a telephone call center that provides permissible finder services.

An FHC that acts as a finder for a buyer or seller may also provide the buyer or seller with any combination of other services that are permissible under Regulation Y, so long as the finder and other services are provided in accordance with any applicable limitations under the finder provisions of Regulation Y. For example, a finder for a merchant may, in addition to acting as a finder, make, acquire, broker, or service loans or other extensions of credit to or for the merchant or merchant's customers; provide the merchant with check-verification, check-guaranty, collection agency, and credit bureau services; provide financial investment advice to the merchant or its customers (within the parameters of Regulation Y); act as a certification authority for digital signatures and thereby authenticate the identity of persons conducting business with the merchant over electronic networks; and process and transmit financial, economic, and banking data on behalf of the merchant, such as processing the merchant's accounts receivable and debit and credit card transactions. The FHC may also provide the merchant

1. An FHC is permitted to act as a finder for financial products and services as part of other permissible financial activities. For example, an FHC may act as a finder (1) in the purchase and sale of securities under authority to act as a securities broker under section 225.86(a) of Regulation Y or (2) in the purchase or sale of insurance products as an insurance agent under section 225.86(c) of Regulation Y.

with bill-payment and billing services, as well as processing order, distribution, accounting, settlement, collection, and payment information for the merchant's transactions.

Furthermore, an FHC may market and provide its own financial products and services in conjunction with acting as a finder for buyers and sellers of nonfinancial products and services. For example, an FHC may use its finder services to promote a company's products and services and, in connection with that activity, may negotiate on its own behalf and bind itself to transactions.

3910.0.1 LIMITATIONS ON AN FHC THAT ACTS AS A FINDER

A finder cannot serve as a principal in the underlying transaction. A finder may act only as an intermediary between a buyer and a seller. A finder may not negotiate for or bind any buyer or seller to the terms of a specific transaction or negotiate the terms of a specific transaction on behalf of a buyer or seller. However, a finder may—

1. arrange for buyers to receive preferred terms from sellers so long as the terms are not negotiated as part of any individual transaction, are provided generally to customers or broad categories of customers, and are made available by the seller (and not by the FHC), and
2. establish rules of general applicability governing the use and operation of the finder service, including rules that—
   - govern the submission of bids and offers by buyers and sellers that use the finder service and the circumstances under which the finder service will match bids and offers submitted by buyers and sellers, and
   - govern the manner in which buyers and sellers may bind themselves to the terms of a specific transaction.

A finder may not (1) take title to or acquire or hold an ownership interest in any product or service offered or sold through the finder service; (2) provide distribution services for physical products or services offered or sold through the finder service; (3) own or operate any real or personal property that is used for the purpose of manufacturing, storing, transporting, or assembling physical products offered or sold by third parties; or (4) own or operate any real or personal property that serves as a physical location for the physical purchase, sale, or distribution of products or services offered or sold by third parties. Further, a finder cannot engage in any activity that would require the company to register or obtain a license as a real estate agent or broker under applicable law.

3910.0.2 REQUIRED DISCLOSURES

A finder is required to distinguish the products and services offered by the FHC from those offered by a third party through the finder service. Because an FHC may act as a finder for third parties through varied technological means and in a wide variety of circumstances, FHCs are not required to provide specific disclosures. The Board expects FHCs to provide disclosures that, given the medium employed and type of buyers and sellers using the service (for example, consumers or corporations), are reasonably designed to ensure that users are not led to believe that the FHC is providing the products or services offered or sold by third parties through the finder service. An FHC could provide such notice by identifying those products or services that are offered or sold by the FHC (with a corresponding notice that all other products or services are provided by third parties), or by identifying those products or services that are offered and sold by third parties and not by the FHC.

Physical Commodity Trading Activities on a Limited Basis (Section 4(k) of the BHC Act) Section 3920.0

A financial holding company (FHC) requested the Board's approval under section 4(k) of the Bank Holding Company Act (the BHC Act) to retain all of the shares of a company that engaged in a variety of commodity-related activities in the United States, including trading in physical commodities, an activity not previously approved under the BHC Act.

Regulation Y authorizes bank holding companies (BHCs) to engage as principal in forward contracts, options, futures, options on futures, swaps, and similar contracts, whether traded on exchanges or not, based on a rate, price, financial asset, nonfinancial asset, or group of assets (other than a bank-ineligible security) (commodity derivatives). A BHC may conduct commodity derivatives activities under Regulation Y subject to certain restrictions that are designed to limit the BHC's activity to trading and investing in financial instruments rather than dealing directly in physical commodities. Under these restrictions, a BHC may take and make delivery of physically settled derivatives involving commodities that a state member bank is permitted to own.[1] For all other types of physically settled derivatives,[2] a BHC must make reasonable efforts to avoid delivery on such derivatives or must take and make delivery only on an instantaneous, pass-through basis. (See section 3260.0.4.6.) Other than in the limited circumstances described above in connection with commodity derivatives, Regulation Y generally does not permit BHCs to take or make delivery of nonfinancial commodities.

The FHC requested that the Board expand the authority of FHCs to purchase and sell commodities in the spot market and to take and make delivery of physical commodities to settle commodity derivatives (commodity trading activities). Commodity trading activities substantially involve the commercial activities of physically owning and disposing of assets such as oil, natural gas, agricultural products, and other nonfinancial commodities. Moreover, the risks associated with conducting these activities are commercial risks not traditionally incurred or managed to a material extent by banking organizations. Accordingly, the Board did not believe that commodity trading activities could be construed as incidental to a financial activity within the meaning of the Gramm-Leach-Bliley Act (the GLB Act). The Board concluded, however, for the reasons set forth below, that there was a reasonable basis for construing these activities as complementary to a financial activity within the meaning of the GLB Act.

A number of considerations supported a Board determination that commodity trading activities are complementary to a financial activity. First, commodity trading activities flow from the existing financial activities of FHCs. In particular, commodity trading activities provide FHCs with an alternative method of fulfilling their obligations under otherwise BHC-permissible commodity derivatives. For example, if warranted by market conditions, an FHC would be able to use commodity trading activity authority to take a commodity derivative to physical settlement rather than terminating, assigning, offsetting, or otherwise cash-settling the contract.

The Board also noted that the applicant contended that the existing restrictions of Regulation Y place FHCs at a significant bargaining disadvantage when operating in physically settled over-the-counter (OTC) derivatives markets. According to the applicant, counterparties to FHCs in these markets are aware of the regulatory impediments that inhibit FHCs from taking derivative contracts to physical settlement. As a consequence, FHCs that participate in these markets can be forced to terminate or offset their derivative contracts on uneconomic terms. Allowing FHCs to engage in commodity trading activities would permit FHCs to compete in physically settled OTC derivatives markets more economically.

The Board concluded that commodity trading activities involving a particular commodity complement the financial activity of engaging regularly as principal in BHC-permissible commodity derivatives based on that commodity.[3] In order to authorize FHCs to engage in commodity trading activities as a complementary activity under the GLB Act, the Board also must determine that those activities do not pose a substantial risk to the safety or soundness of depository institutions or the U.S. financial sys-

1. State member banks may own, for example, investment-grade corporate debt securities, U.S. government and municipal securities, foreign exchange, and certain precious metals.

2. These derivative contracts would include instruments based on, for example, energy-related and agricultural commodities.

3. For example, commodity trading activities involving all types of crude oil would be complementary to engaging regularly as principal in BHC-permissible commodity derivatives based on Brent crude oil.

tem generally.[4] To limit the potential safety-and-soundness risks of commodity trading activities, the applicant proposed to engage in only a limited amount of commodity trading activities. As a condition of the Board's order, the market value of commodities held by the applicant as a result of commodity trading activities must not exceed 5 percent of the applicant's consolidated tier 1 capital.[5] The applicant also must notify its designated supervising Federal Reserve Bank if the market value of commodities held by the applicant as a result of its Commodity trading activities exceeds 4 percent of its tier 1 capital.

In addition, the Board's order permitted the applicant to take and make delivery only of physical commodities for which derivative contracts have been approved for trading on a U.S. futures exchange by the Commodity Futures Trading Commission (CFTC) (unless specifically excluded by the Board) or that have been specifically approved by the Board.[6] This requirement is designed to prevent the applicant from becoming involved in dealing in finished goods and other items, such as real estate, that lack the fungibility and liquidity of exchange-traded commodities.

The Board concluded that permitting the applicant to engage in the limited amount and types of commodity trading activities described above would not appear to pose a substantial risk to it, its subsidiary depository institutions, or the U.S. financial system generally. The Board also concluded that permitting the applicant to buy and sell commodities in the spot market or physically settle commodity derivatives would not appear to increase significantly the organization's potential exposure to commodity-price risk.

4. 12 U.S.C. 1843(k)(1)(B).

5. The applicant is required to include in this 5 percent limit the market value of any commodities it holds as a result of a failure of its reasonable efforts to avoid taking delivery under section 225.28(b)(8)(ii)(B) of Regulation Y.

6. The particular commodity derivative contract that the applicant takes to physical settlement need not be exchange-traded, but (in the absence of specific Board approval) futures or options on futures on the commodity underlying the derivative contract must have been approved for exchange trading by the CFTC. The CFTC publishes annually a list of the CFTC-approved commodity contracts. See, for example, Commodity Futures Trading Commission, *FY 2002 Annual Report to Congress* 124.

With respect to granularity, the Board intends this requirement to permit commodity trading activities involving all types of a listed commodity. For example, commodity trading activities involving any type of coal or coal derivative contract would be permitted, even though the CFTC list specifically approves only Central Appalachian coal.

The Board's order acknowledged that adding commodity trading activities would expose the applicant to additional risks, including, but not limited to, storage risk, transportation risk, and legal and environmental risks. To minimize these risks, the applicant was not authorized to (1) own, operate, or invest in facilities for the extraction, transportation, storage, or distribution of commodities or (2) process, refine, or otherwise alter commodities. In conducting its commodity trading activities, the applicant was expected to use appropriate storage and transportation facilities owned and operated by third parties.[7]

The applicant indicated that it will mandate that the commodity storage facilities it uses have all required governmental permits and provide the applicant with a certificate to that effect. The applicant further stated that all commodity storage facilities will be inspected by or on its behalf before use and that it will physically inspect any commodity in storage every six months.

The applicant also stated that it would adopt additional standards for commodity trading activities that involve environmentally sensitive products, such as oil or natural gas. For example, the applicant will require that the owner of every vessel that carries oil on its behalf be a member of a protection and indemnity club and carry the maximum insurance for oil pollution available from the club. Every such vessel will be required to carry substantial amounts of additional oil pollution insurance from creditworthy insurance companies. The applicant will place age limitations on vessels and will require vessels to be approved by a major international oil company and have appropriate response plans and equipment for oil spills. The applicant will also have a comprehensive backup plan in the event any vessel owner fails to respond adequately to an oil spill and will hire inspectors to monitor the loading and discharging of vessels.

The applicant also represented that it will have in place specific policies and procedures for the storage of oil. In addition, the applicant will require all oil storage facilities it uses to carry a significant amount of oil pollution insurance from a creditworthy insurance company and to have appropriate spill response plans and equipment. The applicant will also follow a

7. The Board's approval of commodity trading activities as a complementary activity, subject to the limits and conditions, did not restrict the existing authority of the applicant to deal in foreign exchange, precious metals, or any other bank-eligible commodity.

comprehensive backup plan in the event the storage facility owner fails to respond adequately to an oil spill.

The Board determined that the applicant had the managerial expertise and internal control framework to manage the risks of taking and making delivery of physical commodities. It also concluded that the applicant had the expertise and internal controls to integrate effectively the risk management of commodity trading activities into its overall risk-management framework, which includes managing on a consolidated basis the overall exposure arising from the applicant's commodity-related activities.

For these reasons, and based on the applicant's policies and procedures for monitoring and controlling the risks of commodity trading activities, the Board concluded that consummation of the proposal did not pose a substantial risk to the safety and soundness of depository institutions or the financial system generally and could reasonably be expected to produce benefits to the public that outweighed any potential adverse effects. (See 2003 FRB 508.)

Banking organizations have long been engaged in the sale of insurance products and annuities, although these activities historically have been subject to several restrictions. For example, until recently, national banks could sell most types of insurance, but only through an agency located in a small town. Bank holding companies were also permitted to engage in only limited insurance agency activities under the Bank Holding Company Act. State-chartered banks, on the other hand, generally have been permitted to engage in insurance sales activities as agent to the extent permitted by state law.

The Gramm-Leach-Bliley Act of 1999 (the GLB Act), however, authorized bank holding companies that make an effective election to become a financial holding company (FHC) to *underwrite* and *sell* any type of insurance nationwide. In addition, the GLB Act authorized national banks and state-chartered member banks to sell all types of insurance products through a financial subsidiary. *The GLB Act generally did not change the powers of banks to sell insurance directly.* As a result of the GLB Act and marketplace developments, many banking organizations are increasing the range and volume of their insurance and annuities sales activities.

To the extent permitted by applicable law, banking organizations may conduct insurance and annuity sales activities through a variety of structures and delivery channels, including ownership of an insurance underwriter or an insurance agency or broker, the employment by a bank of licensed agents, a joint marketing arrangement with a producer,[1] independent agents located at a bank's office, direct mail, telemarketing, and Internet marketing.

A banking organization may also conduct insurance or annuity sales activities through a managing general agent (MGA). An MGA is a wholesaler of insurance products and services to insurance agents. The MGA has a contractual agreement with an insurance carrier to assume functions for the carrier, which may include marketing, accounting, data processing, policy recordkeeping, and monitoring or processing claims. The MGA may rely on various local agents or agencies to sell the carrier's products. Most states require an MGA to be licensed.

3950.0.1 OVERVIEW AND SCOPE

The following guidance pertains to bank holding companies (BHCs) (including FHCs) and state member banks that are either directly or indirectly engaged in the sale of insurance or annuity products as agents. As noted above, the GLB Act amended the BHC Act to allow a BHC or foreign bank that qualifies as an FHC to engage in a broad range of insurance activities, including underwriting or selling (as agent or broker) any type of insurance and issuing and selling annuities, in any state.

BHCs that are not FHCs may sell or underwrite insurance as a principal, agent, or broker only to the limited extent authorized, before the GLB Act, under section 4(c)(8) of the BHC Act and section 225.28(b)(11) of Regulation Y. For example, a BHC that is not an FHC may underwrite and sell insurance (including home mortgage redemption insurance) that is directly related to an extension of credit by the BHC or any of its subsidiaries and that is limited to ensuring repayment of the outstanding balance due on the extension of credit in the event of the death, disability, or involuntary unemployment of the debtor. A BHC that is not an FHC can also sell any type of insurance as agent in a town if the town has a population of 5,000 or less and the BHC or a subsidiary has a lending office in the small town. (See section 3170.0.)

The GLB Act permits state member banks that are not authorized by applicable state law to sell insurance directly through a financial subsidiary.[2] A financial subsidiary engaged in insurance sales may be located wherever state law permits the establishment and operation of an insurance agency. Such subsidiaries, however, would be subject to state licensing and other requirements. The examination guidance found in this section is limited to insurance and annu-

1. The term "producer" refers broadly to persons, partnerships, associations, limited liability corporations, etc., that hold a license to sell or solicit contracts of insurance to the public. Insurance agents and agencies are producers who, through a written contractual arrangement known as a direct appointment, represent one or more insurance underwriters. Independent agents and agencies are those producers that sell products underwritten by one or more insurance underwriters. Captive agents and agencies represent a specific underwriter and sell only its products. Brokers are producers that represent the purchaser of insurance and obtain bids from competing underwriters on behalf of their clients. State insurance laws and regulations often distinguish between an insurance agent and a broker; in practice, the terms are often used interchangeably.

2. Rules pertaining to state member bank financial subsidiaries are found in the Board's Regulation H (12 C.F.R. 208.71–77).

ity *sales* activities. Because this section focuses only on insurance sales activities, it does *not* address insurance underwriting (that is, as principal) activities of FHCs or the limited insurance-underwriting powers of BHCs or state member banks. Examiner guidance on performing appropriate risk assessments for insurance and annuity sales activities of BHCs (including FHCs) and state member banks is included.[3]

Additionally, guidance is provided for examining a state member bank for compliance with the consumer protection rules relating to insurance and annuities sales activities that are contained in the Board's December 2000 revisions to Regulation H (subpart H) (12 C.F.R. 208.81–86), ''Consumer Protection in Sales of Insurance'' (CPSI). Subpart H, which became effective October 1, 2001, implements the insurance consumer protection requirements of the GLB Act, which are codified at 12 U.S.C. 1831x. (See 65 *Fed. Reg.* 75841 (December 4, 2000)). The regulation applies not only to the sale of insurance products or annuities by the state member bank but also to activities of any person engaged in insurance product or annuity sales on behalf of the state member bank, as discussed in this guidance. The guidance is generally not applicable to debt-cancellation contracts and debt-suspension agreements, unless these products are considered to be insurance products by the state in which the sales activities are conducted.

The Federal Reserve is responsible for evaluating the consolidated risk profile of a BHC or state member bank, including determining the risks posed to the BHC or state member bank from the insurance sales activities it conducts, directly or indirectly, and determining the effectiveness of its risk-management systems. The GLB Act also established a regulatory framework that is designed to ensure that the Federal Reserve coordinates with, and relies to the extent possible on information from, the state insurance authorities when it is supervising the insurance activities conducted by a BHC or state member bank through a functionally regulated subsidiary.

3. The term ''risk assessment'' denotes the work product described in SR-97-24, ''Risk-Focused Framework for Supervision of Large Complex Institutions,'' and entails an analysis of (1) the level of inherent risk by type of risk (operational, legal, market, liquidity, credit, and reputation risk) for a business line or business function, (2) the adequacy of management controls over that business line or business function, and (3) the direction of the risk (increasing, decreasing, or stable).

Consistent with the Federal Reserve's risk-focused framework for supervising banking organizations, resources allocated to the review of insurance sales activities should be commensurate with the significance of the activities and the risk they pose to the banking organization. The scope of the review depends on the significance of the activity to the BHC or state member bank and on the extent to which the bank is directly involved in the activity. Examiner judgment is required to tailor the reviews, as appropriate, on the basis of the legal, organizational, and risk-management structure of the BHC's or state member bank's insurance sales activities and on other relevant factors.[4]

3950.0.2 SUPERVISORY APPROACH FOR THE REVIEW OF INSURANCE AND ANNUITY SALES ACTIVITIES

3950.0.2.1 Supervisory Objective

The primary objective of the review is to determine the level and direction of risk to a BHC or state member bank from its insurance sales activities, including insurance sales activities conducted directly, by or in conjunction with a subsidiary or affiliate, or through a third-party arrangement. Primary risks that may arise from insurance sales activities include operational, legal, and reputational risk. If the BHC or state member bank does not adequately manage these risks, they could have an adverse impact on a BHC's or state member bank's earnings and capital. The examiner should produce (1) a risk assessment that summarizes the level of inherent risk to the BHC or state member bank by risk category and (2) an assessment of the adequacy of board of directors and management oversight of the activity, including the activity's internal control framework. For those state member banks selling insurance or annuity products, or that enter into arrangements under which another party sells insurance or annuity products at the bank's offices or on behalf of the bank, a second objective of the review is to determine the bank's compliance with the consumer protection provisions of the GLB Act and the CPSI regulation.

4. See SR-02-01, ''Revisions to Bank Holding Company Supervision Procedures for Organizations with Total Consolidated Assets of $5 Billion or Less,'' and section 1000.1 of the *Commercial Bank Examination Manual* for a discussion of the Federal Reserve's risked-focused examinations and the risk-focused supervision program for community banking organizations. See also SR-97-24.

3950.0.2.2 State Regulation of Insurance Activities

Historically, insurance activities have primarily been regulated by the states. In 1945, Congress passed the McCarran-Ferguson Act, which granted states the power to regulate most aspects of the insurance business. The McCarran-Ferguson Act states that ''no act of Congress shall be construed to invalidate, impair, or supersede any law enacted by any state for the purpose of regulating the business of insurance, or which imposes a fee or tax upon such business, provided the Act shall be applicable to the business of insurance to the extent that such business is not regulated by State law'' (15 U.S.C. 1012(b)).

State regulation of insurance producers is centered on the protection of the consumer and consists primarily of licensing and continuing education requirements for producers. A producer generally must obtain a license from each state in which it sells insurance and for each product sold. Each state in which a producer sells insurance has regulatory authority over the producer's activities in the state.

The GLB Act does include several provisions that are designed to keep states from (1) unfairly regulating a BHC or bank to prevent it from engaging in authorized insurance activities or (2) otherwise discriminating against BHCs and banks engaged in insurance activities. These provisions are complex and beyond the scope of this guidance. It should be noted, however, that the GLB Act generally does not prohibit a state from requiring a BHC or bank, or its employees engaged in insurance sales, solicitation, or cross-marketing activities, to be licensed within the state.

State insurance regulatory authorities do not conduct routine, periodic examinations of an insurance producer. A state examination of an insurance producer is generally conducted only on an ad hoc basis and is primarily based on the volume and severity of consumer complaints. The state examination may also be based in part on the producer's market share and on previous examination findings. Additionally, a review of a producer would typically not assess its financial condition.

State market conduct examinations of *insurance sales practices* are focused at the insurance-underwriter level.[5] The insurance underwriter is generally held accountable for compliance with state insurance laws to protect the consumer from the unfair sales practices of any producer that markets the insurance underwriter's products. Market conduct examinations of an insurance underwriter may potentially uncover a concern about a particular producer, such as a bank-affiliated producer.[6] However, in the past, a state insurance regulatory authority has not typically examined a producer unless the insurance underwriter owns the producer.

Generally, market conduct examinations include reviews of insurance underwriters' complaint handling, producer licensing, policyholder service, and marketing and sales practices. Typically, a state authority will direct a corrective action for insurance sales activity at the underwriter. The states generally have specific guidance for their market conduct examinations of life, health, and property/casualty[7] lines of business guidance that corresponds to regulations related to advertising, misrepresentations, and disclosures for these different business lines. The reports of examination issued by the state insurance departments are usually available to the public.

Because the underwriter, not the producer, is liable to the insured, the failure of an insurance producer generally would not result in financial loss to consumers or state guarantee funds. Consequently, there are no regulatory capital requirements for insurance producers, nor do states require regulatory reporting of financial statement data on insurance producers. While the underwriter is ultimately liable to the insured, in some instances a producer and its owner may be held liable for misrepresentations, as well as for violations of laws and regulations.

5. Generally, market conduct reviews of *insurance underwriters* are conducted on an ad hoc basis, triggered primarily by the volume and severity of consumer complaints, and are based on the underwriter's market share or on previous examination findings. In some states, however, market conduct reviews of insurance underwriters are conducted on a periodic, three- to five-year schedule.

6. The terms ''insurance underwriter,'' ''insurer,'' ''insurance carrier,'' and ''insurance company'' are industry terms that apply similarly to the party to an insurance arrangement who undertakes to indemnify for losses, that is, the party that assumes the principal risk under the contract.

7. Property insurance indemnifies a person who has an interest in a physical property for loss of the property or the loss of its income-producing abilities. Casualty insurance is primarily concerned with the legal liability for losses caused by injury to persons or damage to the property of others. It may also include such diverse forms of insurance as crime insurance, boiler and machinery insurance, and aviation insurance. Many casualty insurers also underwrite surety bonds.

3950.0.2.3 Functional Regulation

Under the GLB Act, reviews by banking supervisors of insurance or securities activities conducted in a BHC's or bank's functionally regulated subsidiary are not to be extensions of more traditional bank-like supervision. Rather, to the extent possible, bank supervisors are to rely on the functional regulators to appropriately supervise the insurance and securities activities of a functionally regulated subsidiary. A functionally regulated subsidiary includes any subsidiary of a BHC or bank that (1) is engaged in insurance activities and subject to supervision by a state insurance regulator or (2) is registered as a broker-dealer with the Securities and Exchange Commission. The GLB Act does *not* limit the Federal Reserve's supervisory authority with respect to a BHC or state member bank or the insurance activities conducted by either of them. The functional regulators for insurance sales activities, including the activities of insurance producers, consist of the insurance departments in each of the 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, American Samoa, and Guam.

The GLB Act places certain limits on the ability of the Federal Reserve to examine, obtain reports from, or take enforcement action against a functionally regulated nondepository subsidiary of a BHC or state member bank. For purposes of these limitations, a subsidiary licensed by a state insurance department to conduct insurance sales activities is considered functionally regulated only with respect to its insurance activities and any activities incidental to those activities.[8]

The GLB Act indicates that the Federal Reserve must rely, to the fullest extent possible, on information obtained by the appropriate state insurance authority of a nondepository insurance agency subsidiary of a BHC or state member bank. In addition, the Federal Reserve may examine a functionally regulated subsidiary of a BHC or state member bank only in the following situations:

1. The Federal Reserve has reasonable cause to believe that the subsidiary is engaged in activities that pose a material risk to an affiliated depository institution, as determined by the responsible Reserve Bank and Board staff.
2. After reviewing relevant information available at the BHC or state member bank level (including information obtained from the appropriate functional regulator), it is determined that an inspection or examination is necessary to adequately understand and assess the banking organization's systems for monitoring and controlling the financial and operational risks that may pose a threat to the safety and soundness of an affiliated depository institution.
3. On the basis of reports and other available information (including information obtained from the appropriate functional regulator), there is reasonable cause to believe that the subsidiary is not in compliance with a federal law that the Federal Reserve has specific jurisdiction to enforce with respect to the subsidiary (including limits relating to transactions with affiliated depository institutions), and the Federal Reserve cannot assess such compliance by examining the BHC or state member bank or other affiliated depository institution.

Other similar restrictions limit the ability of the Federal Reserve to obtain a report directly from, or take enforcement action against, a functionally regulated nonbank subsidiary of a BHC or state member bank. As noted above, these GLB Act limitations do *not* apply to a BHC parent company or state member bank even if the BHC parent company or state member bank is itself licensed by a state insurance regulatory authority to conduct insurance sales activities.

Staff who are conducting reviews of BHC or state member bank insurance or annuity sales activities should be thoroughly familiar with SR-00-13, which provides guidance on reviews of functionally regulated BHC or state member bank subsidiaries. Reserve Bank staff may conduct an examination of a functionally regulated subsidiary, or request a specialized report from a functionally regulated subsidiary, only after obtaining approvals from the appropriate staff of the Board's Division of Banking Supervision and Regulation.

When preparing or updating the risk assessment of a BHC's or state member bank's insurance or annuity sales activities, Federal Reserve staff, when appropriate, should coordinate their activities with the appropriate state insurance authorities. The Federal Reserve's supervision of BHCs or state member banks engaged in insurance sales activities is not intended to replace or duplicate the regulation of insurance

8. For example, if a BHC's nonbank subsidiary engages in mortgage lending and is also licensed as an insurance agency, it would be considered a functionally regulated subsidiary only to the extent of its insurance sales activities.

activities by the appropriate state insurance authorities.

3950.0.2.4 Information Sharing with the Functional Regulator

The Federal Reserve and the National Association of Insurance Commissioners (NAIC) approved a model memorandum of understanding (MOU) on the sharing of confidential information between the Federal Reserve and individual state insurance departments.[9] The Board also approved the delegation of authority to the Board's general counsel to execute agreements with individual states, based on this MOU. Examiners should follow required Board administrative procedures before sharing any confidential information with a state insurance regulator. (These procedures generally require Federal Reserve staff to identify and forward to Board staff for review any confidential information that may be appropriate to share with the applicable state insurance regulator concerning insurance sales activities conducted by BHCs or state member banks.) The Board's Division of Consumer and Community Affairs' CP Letter 2001-11 outlines the procedures for sharing consumer complaint information with state insurance regulators.

3950.0.3 STATUTORY AND REGULATORY REQUIREMENTS AND POLICY GUIDANCE

3950.0.3.1 Privacy Rule and the Fair Credit Reporting Act

BHCs, state member banks, and the subsidiaries of both (other than subsidiaries that are subject to the privacy rules of another financial regulator such as a broker-dealer or insurance company) that sell insurance to consumers must comply with the privacy provisions under title V of the GLB Act (12 U.S.C. 6801–6809), as implemented by the Board's Regulation P (12 C.F.R. 216) (the privacy rule). Functionally regulated BHC and state member bank nonbank insurance agency subsidiaries are not covered by the Federal Reserve's privacy rule; however, they must comply with the privacy regulations (if any) issued by their relevant state insurance regulator.

The privacy rule regulates a BHC's or state member bank's treatment of nonpublic personal information about a "consumer," that is, an individual that obtains a financial product or service (such as insurance) from the institution for personal, family, or household purposes. The privacy rule generally requires a BHC or bank to provide a notice to each of its customers that describes the privacy policies and practices of the BHC or bank no later than when the BHC or bank establishes a business relationship with the customer. The privacy rule also generally prohibits a BHC or bank from disclosing any nonpublic personal information about a consumer to any nonaffiliated third party, unless the BHC or bank first provides to the consumer a privacy notice and a reasonable opportunity to prevent (or "opt out" of) the disclosure, and the consumer does not opt out. The privacy rule permits a BHC or bank to provide a joint notice with one or more of its affiliates or other financial institutions, as identified in the privacy notice itself, provided that the notice is accurate with respect to the institution and the other institutions.

While the privacy rule applies to the sharing of nonpublic personal information by a BHC or bank with nonaffiliated third parties, the sharing of certain consumer information with affiliates or nonaffiliates may be subject to the Fair Credit Reporting Act (FCRA) as well. For example, under the FCRA, if a BHC or bank wants to share with its insurance subsidiary information from a credit report or from a consumer application for credit (such as the consumer's assets, income, or marital status), the BHC or bank must first notify the consumer about the intended sharing and give the consumer an opportunity to opt out. The same rules would apply to an insurance company that wants to share information from credit reports or from applications for insurance with an affiliate or a third party.

3950.0.3.2 Anti-Tying Prohibitions

Federal law (section 106(b) of the BHC Act Amendments of 1970 (12 U.S.C. 1972(b)) generally prohibits a bank from requiring that a customer purchase a product or service from the bank or an affiliate as a prerequisite to obtaining another product or service (or a discount on the other product or service) from the bank. This prohibition applies whether the customer is retail or institutional, or whether the transaction is on bank premises or off premises. For example, a

9. The NAIC is the organization of insurance regulators from the 50 states, the District of Columbia, and the four U. S. territories. The NAIC provides a forum for the development of uniform policy among the states and territories. The NAIC is not a governmental or regulatory body.

state member bank may not require that a customer purchase insurance from the bank or a subsidiary or an affiliate of the bank in order to obtain a loan from the bank (or a reduced interest rate on the loan).[10] The special anti-tying rules in section 106 do not apply to tying arrangements imposed by a BHC or a nonbank affiliate of a BHC.

3950.0.3.3 Policy Statement on Income from Sale of Credit Life Insurance

This Federal Reserve Board policy statement (see the *Federal Reserve Regulatory Service* at 3-1556) sets forth the principles and standards that apply to a bank's sales of credit life insurance and the limitations that apply to the receipt of income from those sales by certain individuals and entities associated with the bank. (See section 3170.0.4.1 and the inspection procedure related to this policy statement in section 3170.0.6.)

3950.0.4 RISK-MANAGEMENT PROGRAM

3950.0.4.1 Elements of a Sound Insurance or Annuity Sales Program

A BHC or state member bank engaged in insurance or annuity sales activities should—

1. conduct insurance sales programs in a safe and sound manner;
2. have appropriate written policies and procedures in place that are commensurate with the volume and complexity of its insurance sales activities;
3. obtain its board of directors' approval of the scope of the insurance and annuity sales program and of written policies and procedures for the program;
4. effectively oversee the sales program activities, including third-party arrangements;
5. have an effective, independent internal audit and compliance program;
6. appropriately train and supervise the employees conducting insurance and annuity sales activities;
7. take reasonable precautions to ensure that disclosures to customers for insurance and annuity sales and solicitations are complete and accurate and are in compliance with applicable laws and regulations;
8. ensure compliance with all applicable federal, state, or other jurisdiction regulations, including compliance with sections 23A and 23B of the Federal Reserve Act as that act applies to affiliate transactions; and
9. have controls in place to ensure accurate and timely financial reporting.

Every banking organization conducting insurance or annuity sales activities should have appropriate, board-approved policies, procedures, and controls in place to monitor and ensure that it complies with both federal and state regulatory requirements. Consistent with the principle of functional regulation, the Federal Reserve will rely primarily on the appropriate state insurance authorities to monitor and enforce compliance with applicable state insurance laws and regulations, including state consumer protection laws and regulations governing insurance sales.

3950.0.4.1.1 Sales Practices and Handling of Customer Complaints

Every component of a banking organization that engages in insurance or annuity sales activities should have board-approved policies and procedures for handling customer complaints related to these sales. The customer complaint process should provide for the recording and tracking of all complaints and require periodic reviews of complaints by compliance personnel. A BHC's or state member bank's board of directors and senior management should also review complaints if the complaints involve significant compliance issues that may pose a risk to the organization.

3950.0.4.1.2 Third-Party Arrangements

BHCs and state member banks, to the extent permitted by applicable law, may enter into agreements with third parties, including unaffiliated agents or agencies, to sell insurance or annuities or provide expertise and services that otherwise would have to be developed in-house. Many banks hire third parties to assist in establishing an insurance program or to train their own insurance staff. A bank may also find it advantageous to offer more specialized insurance products through a third-party arrangement.

A BHC's or state member bank's management should conduct a comprehensive review of an unaffiliated third party before entering into

10. See section 3500.0.

any arrangement to conduct insurance or annuity sales with the third party. The review should include an assessment of the third party's financial condition, management experience, reputation, and ability to fulfill its contractual obligations to the BHC or state member bank, which includes compliance with applicable consumer protection laws and regulations.

The BHC's or state member bank's board of directors or its designated committee should approve any agreements with third parties. Agreements should outline the duties and responsibilities of each party; describe the third-party activities permitted on the institution's premises; address the sharing or use of confidential customer information; and define the terms for use of the BHC's or state member bank's office space, equipment, and personnel. If an arrangement includes dual employees (for example, bank employees who are also employed by an independent third party), the agreement must provide for written employment contracts that specify the duties of these employees and their compensation arrangements.

In addition, a third-party agreement should specify that the third party will comply with all applicable laws and regulations and will conduct its activities in a manner consistent with the CPSI regulation, if applicable. The agreement should authorize the banking organization to monitor the third party's compliance with its agreement, as well as authorize the banking organization to have access to third-party records considered necessary to evaluate compliance. A BHC or state member bank that contracts with a functionally regulated third party should obtain from and review, as appropriate, any relevant, publicly available regulatory reports of examination of the third party.[11] Finally, the agreement should provide for indemnification of the institution by the unaffiliated third party for any losses caused by the conduct of the third party's employees in connection with its sales activities.

A BHC or state member bank is responsible for ensuring that any third party or dual employee selling insurance at or on behalf of the organization is appropriately trained either by the banking organization or the third party with respect to compliance with the minimum disclosures and other requirements of the CPSI regulation and applicable state regulations. The banking organization should obtain and review copies of third-party training and compliance materials to monitor the third party's performance on its disclosure and training obligations.

3950.0.4.1.3 Designation, Training, and Supervision of Personnel

A banking organization hiring personnel to sell insurance or annuities should investigate the backgrounds of the prospective employees. When a candidate for employment has previous insurance industry experience, the banking organization should have procedures to determine whether the individual has been the subject of any disciplinary actions by state insurance regulators.[12]

The banking organization should require its own insurance or annuity sales personnel or third-party sales personnel selling at or on behalf of the bank to receive appropriate training and licensing. Training should cover appropriate policies and procedures for the organization's sales of insurance and annuity products. Personnel who are referring potential or established customers to a licensed insurance producer should also be trained to ensure that referrals are made in conformance with the CPSI regulation, if applicable. The training should also include procedures and guidance to ensure that an unlicensed or referring individual cannot be deemed to be acting as an insurance agent that is subject to licensing requirements.

When insurance or annuities are sold by a banking organization or by third parties at an office of, or on behalf of, the organization, the institution should have policies and procedures to designate, by title or name, the individuals responsible for supervising insurance sales activities, as well as for supervising the referral activities of bank employees not authorized to sell these products. A banking organization also should designate supervisory personnel responsible for monitoring compliance with any third-party agreement, as well as a state member bank's compliance with the CPSI regulation, if applicable.

3950.0.4.1.4 Compliance

Banking organizations should have policies and procedures to ensure that insurance or annuity

11. The reports of examination issued by state insurance regulators are generally public documents. Many states do not conduct periodic examinations of insurance sales activities.

12. Information from the states on the issuance and termination of producer licenses and on producers' compliance with continuing education requirements is available from the NAIC database known as the National Insurance Producer Registry (NIPR).

sales activities are conducted in compliance with applicable laws and regulations (including the CPSI regulation for sales conducted by or on behalf of a state member bank) and the institution's internal policies and procedures. Compliance procedures should identify any potential conflicts of interest and how such conflicts should be addressed. For example, sales-compensation programs should be conducted in a manner that would not expose the BHC or state member bank to undue legal or reputation risks. The compliance procedures should also provide for a system to monitor customer complaints and their resolution. Where applicable, compliance procedures also should call for verification that third-party sales are being conducted in a manner consistent with the governing agreement with the banking organization.

The compliance function should be conducted independently of the insurance and annuity product sales and management activities. Compliance personnel should determine the scope and frequency of their reviews, and findings of compliance reviews should be reported directly to the banking organization's board of directors or to its designated board committee.

3950.0.5 RISK ASSESSMENT OF INSURANCE AND ANNUITY SALES ACTIVITIES

A risk assessment of insurance activities may be accomplished (1) in the course of conducting a regularly scheduled BHC inspection or state member bank examination or (2) as a targeted review. The purpose of preparing the risk assessment is to determine the level and direction of risk to the BHC or bank arising from its insurance and annuity sales activity. The risks to banking organizations engaged in insurance sales programs consist primarily of legal, reputational, and operational risk, all of which may lead to financial loss. After completing the risk assessment, if material concerns remain, the Board's Division of Banking Supervision and Regulation staff should be consulted for further guidance.

Legal and reputational risk may arise from a variety of sources, such as fraud; noncompliance with statutory or regulatory requirements, including those pertaining to the handling of premiums collected on behalf of the underwriter; claims processing; insurance and annuity sales practices; and the handling of "errors and omissions" claims.[13] Other sources of legal and reputational risk may arise from failing to safeguard nonpublic customer information; a high volume of customer complaints; or public regulatory sanctions against a producer.

Legal and reputational risks may also arise from an agent's obligation to provide a customer with products that are suited to the customer's particular needs and are priced and sold in accordance with state regulations. Additionally, an agent or agency may be liable for failing to carry out the appropriate paperwork to bind a policy that it has sold to a customer, or for making an error in binding the policy. State insurance departments generally are permitted by law to suspend or revoke a producer's license and assess monetary penalties against a producer if warranted.

Operational risk may arise from errors in processing sales-related information or from lack of appropriate controls over systems or staff responsible for carrying out the insurance or annuity sales activities. Additionally, banking organizations that have recently commenced insurance or annuity sales activities, or that are expanding their insurance sales business, are exposed to risk arising from inadequate strategic and financial planning associated with the activities, which could result in financial loss. Examiners should be attuned to risks that may arise from inadequate controls over insurance activities, a rapid expansion of the insurance or annuity sales programs offered by banking organizations, the introduction of new products or delivery channels, and legal and regulatory developments.

Operational risk may arise from inadequate premium-payment procedures and trust-account-balance administration by an agency. When the insurance agency bills the insured, the agent must comply with requirements for forwarding the payments to the insurer and for safekeeping the funds. Inadequate internal controls over this activity may result in the inappropriate use of these funds by the agent or agency. The banking organization should ensure that appropriate controls are in place to verify that all funds that are owed to the insurer or the insured are identified in the trust account and that the account is in balance.

When conducting a risk assessment, the examiner should first obtain relevant information to determine the existence and scale of

13. Errors and omissions insurance indemnifies the insured against loss sustained because of an error or oversight by the insured. For instance, an insurance agency generally purchases this type of coverage to protect itself against such things as failing to issue a policy.

insurance or annuity sales activity. Such information is available in the BHC's Bank Holding Company Performance Report or the state member bank's Uniform Bank Performance Report (UBPR) and in other System reports on insurance activities. Relevant reports, including applicable balance sheets and income statements for the insurance and annuity sales activities, may also be obtained from the BHC or state member bank. When preparing a risk assessment for an insurance or annuity sales activity that is conducted by a functionally regulated nonbank subsidiary of a BHC or state member bank, examiners should rely, to the fullest extent possible, on information available from the BHC or state member bank and the appropriate state insurance regulator for the subsidiary. If information that is needed to assess the risk cannot be obtained from the BHC or state member bank, or from the applicable functional regulator, the examiner should consult with the appropriate designated Board staff. Requests should not be made directly to a functionally regulated nonbank insurance and annuity sales subsidiary of a BHC or state member bank without first obtaining approval from the appropriate Board staff.

3950.0.6 CONSUMER PROTECTION IN SALES OF INSURANCE RULES

3950.0.6.1 Overview of the CPSI Regulation

The CPSI regulation is only applicable to all insured depository institutions, including state member banks.[14] The regulation, however, generally *does not* apply to nonbank affiliates or subsidiaries of a state member bank unless the company engages in the retail sale of insurance products or annuities at an office of, or on behalf of, an insured depository institution. Interpretations of the regulation, issued by the federal banking agencies, are found in appendix A of this section. Federal Reserve examiners are responsible for reviewing state member banks' compliance with the regulation. A BHC's board of directors and senior management are responsible for overseeing its depository institution subsidiaries' compliance with the CPSI regulation.

The regulation applies to the retail sale of insurance products and annuities by banks or by any other person at an office of a bank, or acting on behalf of a bank. For purposes of the CPSI regulation, "office" means the premises of the bank where retail deposits are accepted. The regulation applies only to the retail sale of insurance or annuity products—that is, when the insurance is sold or marketed to an individual primarily for personal, family, or household purposes.

14. The CPSI regulation applies to all federally insured depository institutions, including all federally chartered U.S. branches and state-chartered insured U.S. branches of foreign banking organizations.

3950.0.6.2 Misrepresentations Prohibited

The regulation prohibits a bank or other covered person from engaging in any practice or using any advertisement at any office of, or on behalf of, the bank or a subsidiary of the bank if the practice or advertisement could mislead any person or otherwise cause a reasonable person to erroneously believe—

1. that the insurance product or annuity is backed by the federal government or the bank, or is insured by the Federal Deposit Insurance Corporation (FDIC);
2. that an insurance product or annuity does not have investment risk, including the potential that principal may be lost and the product may decline in value, when in fact the product or annuity does have such risks; or
3. in the case of a bank or subsidiary of the bank at which insurance products or annuities are sold or offered for sale, that (1) the bank may condition approval of an extension of credit to a consumer by the bank or subsidiary on the purchase of an insurance product or annuity from the bank or a subsidiary of the bank and (2) the consumer is not free to purchase the insurance product or annuity from another source.

The regulation also incorporates the antitying provisions of section 106(b) of the Bank Holding Company Act Amendments of 1970 (12 U.S.C. 1972). Additionally, banks are prohibited from selling life or health insurance products if the status of the applicant or insured as a victim of domestic violence or as a provider of services to domestic violence victims is considered as a factor in decision making on the product, except as expressly authorized by state law.

3950.0.6.3 Insurance Disclosures

The regulation also requires that a bank or a person selling insurance at an office of, or on behalf of, a bank make the following affirmative disclosures (to the extent accurate), both orally and in writing, before the completion of the initial sale of an insurance product or an annuity to a consumer. However, sales by mail or, if the consumer consents, via electronic media (such as the Internet) do not require oral disclosure.

1. The insurance product or annuity is not a deposit or other obligation of, or guaranteed by, the bank or an affiliate of the bank.
2. The insurance product or annuity is not insured by the FDIC or any other U.S. government agency, the bank, or (if applicable) an affiliate of the bank.
3. The insurance product or annuity, if applicable, has investment risk, including the possible loss of value.

For telephone sales, written disclosures must be mailed within three business days. The above disclosures must be included in advertisements and promotional materials for insurance products and annuities, unless the advertisements or promotional materials are of a general nature and describe or list the nature of services or products offered by the bank. Disclosures must be conspicuous and readily understandable.

3950.0.6.4 Credit Disclosures

When an application for credit is made in connection with the solicitation, offer, or sale of an insurance product or annuity, the consumer must be notified that the bank may not condition the extension of credit on either (1) the consumer's purchase of an insurance product or annuity from the bank or any of its affiliates or (2) the consumer's agreement not to obtain, or a prohibition on the consumer from obtaining, an insurance product or annuity from an unaffiliated entity. These disclosures must be made both orally and in writing; however, applications taken by mail or, if the consumer consents, via electronic media do not require oral disclosure. For telephone applications, the written disclosure must be mailed within three business days. The disclosures must be conspicuous and readily understandable.

3950.0.6.5 Consumer Acknowledgment

The bank must obtain written or electronic acknowledgments of the consumer's receipt of the disclosures described above at the time they are made or at the completion of the initial purchase. For telephone sales, the bank must receive an oral acknowledgment and make a reasonable effort to obtain a subsequent written or electronic acknowledgment.

3950.0.6.6 Location

Insurance and annuity sales activities must take place, to the extent practicable, in an area physically segregated from one where retail deposits are routinely accepted from the general public (such as teller windows). The bank must clearly identify and delineate areas where insurance and annuity sales activities occur.

3950.0.6.7 Referrals

Any person who accepts deposits from the public in an area where deposits are routinely accepted may refer a consumer to a qualified person who sells insurance products or annuities only if the person making the referral receives no more than a one-time, nominal fee of a fixed dollar amount for the referral. The amount of the referral fee may not depend on whether a sale results from the referral.

3950.0.6.8 Qualifications

A bank may not permit any person to sell or offer insurance products or annuities at its office or on its behalf, unless that person is at all times properly qualified and licensed under applicable state law for the specific products being sold or recommended.

3950.0.6.9 Relationship of the CPSI Regulation to State Regulation

The GLB Act contains a legal framework for determining the effect of the CPSI regulation on state laws governing the sale of insurance, including state consumer protection standards. In general, if a state has legal requirements that are inconsistent with, or contrary to, the CPSI regulation, initially the federal regulation does not apply in the state. However, the federal banking agencies may, after consulting with the state involved, decide to preempt any inconsistent or contrary state laws if the agencies find that the CPSI regulation provides greater protections than the state laws. It is not expected that there will be significant conflict between state and federal laws in this area. If the consumer protection laws of a particular state appear to be inconsistent with and less stringent (that is, provide less consumer protection) than the CPSI regulation, examiners should inform the staff of the Board's Division of Banking Supervision and Regulation.

3950.0.6.10 Relationship to Federal Reserve Guidance on the Sale of Nondeposit Investment Products

When a bank sells insurance products or annuities that also are securities (such as variable life insurance annuities), it must conform with the applicable Federal Reserve and interagency guidance pertaining to a bank's retail sales of nondeposit investment products (NDIPs).[15] If the CPSI regulation and the guidance pertaining to NDIPs conflict, the CPSI regulation prevails.

3950.0.6.11 Examining a State Member Bank for Compliance with the CPSI Regulation

Examinations for compliance with the CPSI regulation should be conducted consistent with the risk-focused supervisory approach when a state member bank sells insurance products or annuities directly, or when a third party sells insurance or annuities at or on behalf of a state member bank. To the extent practicable, the examiner should conduct the review at the state member bank. In certain instances, however, the examiner's review at the state member bank may identify potential supervisory concerns about the state member bank's compliance with the CPSI regulation as it pertains to insurance or annuities sales conducted by a functionally regulated nonbank affiliate or subsidiary of the state member bank that is selling insurance products or annuities at or on behalf of the state member bank.

If the examiner determines that an on-site review of a functionally regulated nonbank affiliate or subsidiary of the state member bank is appropriate to adequately assess the state member bank's compliance with the CPSI regulation, the examiner should discuss the situation with staff of the Board's Division of Banking Supervision and Regulation. The approval of the Division of Banking Supervision and Regulation's officer that is responsible for the supervisory policy and examination guidance pertaining to insurance and annuity sales activities should be obtained before examining or requesting any information directly from a functionally regulated nonbank affiliate or subsidiary of the state member bank that is selling insurance or annuity products at or on behalf of the state member bank.

The state member bank examination procedures described in section 3950.0.10.2 apply to retail sales, solicitations, advertisements, or offers of insurance products and annuities by any state member bank or any other person that is engaged in such activities at an office of the bank, or on behalf of the state member bank. For purposes of the CPSI regulation, activities "on behalf of a state member bank" include activities in which a person, whether at an office of the bank or at another location, sells, solicits, advertises, or offers an insurance product or annuity and in which at least one of the following applies:

1. The person represents to a consumer that the sale, solicitation, advertisement, or offer of any insurance product or annuity is by or on behalf of the bank.
2. The bank refers a consumer to a seller of insurance products or annuities, and the bank has a contractual arrangement to receive commissions or fees derived from the sale of an insurance product or annuity resulting from the bank's referral.
3. Documents evidencing the sale, solicitation, advertising, or offer of an insurance product or annuity identify or refer to the bank.

3950.0.7 APPENDIX A—JOINT INTERPRETATIONS OF THE CONSUMER PROTECTION IN SALES OF INSURANCE REGULATION

In response to a banking association's inquiries, the federal banking agencies jointly issued interpretations regarding the Consumer Protection in Sales of Insurance (CPSI) regulation.[16] A joint statement, issued on August 17, 2001, contains responses to a set of questions relating to disclosure and acknowledgment, the scope of applicability of the regulation, and compliance. Additionally, a February 28, 2003, joint statement

15. Interagency Statement on Retail Sales of Nondeposit Investment Products, February 17, 1994. See SR-94-11.

16. These letters, issued jointly by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision, may be accessed on these agencies' web sites.

responded to a request to clarify whether the disclosure requirements apply to renewals of pre-existing insurance policies sold before October 1, 2001, the effective date of the regulation. The issues raised and the banking agencies' responses are summarized below.

3950.0.7.1 Disclosures

3950.0.7.1.1 Credit Disclosures

A bank or other person who engages in insurance sales activities at an office of, or on behalf of, a bank (''a covered person'') must make the credit disclosures set forth in the regulation if a consumer is solicited to purchase insurance while the consumer's loan application is pending. A consumer's application for credit is still ''pending'' for purposes of the regulation if the depository institution has approved the consumer's loan application but not yet notified the consumer. Until the consumer is notified of the loan approval, the covered person must provide the credit disclosures if the consumer is solicited, offered, or sold insurance.

3950.0.7.1.2 Disclosures for Sales by Mail and Telephone

The regulation requires a covered person to provide oral disclosures and to obtain an oral acknowledgment of these disclosures when sales activities are conducted by telephone. This requirement applies regardless of whether the consumer will also receive and acknowledge written disclosures in person, through the mail, or electronically.

3950.0.7.1.3 Use of Short-Form Insurance Disclosures

There is no short form for the credit disclosures. A depository institution, however, may use the short-form insurance disclosures set forth below in visual media (such as television broadcasting, ATM screens, billboards, signs, posters, and written advertisements and promotional materials):

- NOT A DEPOSIT
- NOT FDIC-INSURED
- NOT INSURED BY ANY FEDERAL GOVERNMENT AGENCY
- NOT GUARANTEED BY THE BANK
- MAY GO DOWN IN VALUE

3950.0.7.2. Acknowledgment of Disclosures

3950.0.7.2.1 Reasonable Efforts to Obtain Written Acknowledgment

The banking agencies have not prescribed any steps that must be taken for a depository institution's efforts to obtain a written acknowledgment to be deemed ''reasonable'' in a transaction conducted by telephone. Examples of reasonable efforts, however, include:

1. providing the consumer with a return-addressed envelope or similar means to facilitate the consumer's return of the written acknowledgment,
2. making a follow-up phone call or contact,
3. sending a second mailing, or
4. similar actions.

The covered person should (1) maintain documentation that the written disclosures and the request for written acknowledgment of those disclosures were mailed to the consumer and (2) record his or her efforts to obtain the signed acknowledgment. The ''reasonable efforts'' policy exception for telephone sales does not apply to other types of transactions, such as mail solicitations, in which a covered person must obtain from the consumer a written (in electronic or paper form) acknowledgment.

3950.0.7.2.2 Appropriate Form or Format for Acknowledgment Provided Electronically

Electronic acknowledgments are not required to be in a specific format but must be consistent with the provisions of the CPSI regulation applicable to acknowledgments. That is, the electronic acknowledgment must establish that the consumer has acknowledged receipt of the credit and insurance disclosures, as applicable.

3950.0.7.2.3 Retention of Acknowledgments by an Insurance Company

If an insurance company provides the disclosures and obtains the acknowledgment on behalf of a depository institution, the insurance company may retain the acknowledgment. The depository institution is responsible for ensuring that sales made "on behalf of" the depository institution are in compliance with the CPSI regulation. An insurance company may maintain documentation showing compliance with the CPSI regulation, but the depository institution should have access to such records and the records should be readily available for review by examiners.

3950.0.7.2.4 Form of Written Acknowledgment

There is no prescribed form for the written acknowledgment. The regulation requires, however, that a covered person obtain the consumer's acknowledgment of receipt of the complete insurance and credit disclosures.

3950.0.7.2.5 Timing of Acknowledgment Receipt

A covered person must obtain the consumer's acknowledgment either at the time a consumer receives disclosures *or* at the time of the initial purchase of an insurance product. The CPSI regulation does not prescribe any specific wording for an oral acknowledgment. However, if a covered person has made the insurance and credit disclosures orally, an affirmative response to the question "Do you acknowledge that you received this disclosure?" is acceptable.

3950.0.7.3 Scope of the CPSI Regulation

3950.0.7.3.1 Applicability to Private Mortgage Insurance

Depending on the nature of a depository institution's involvement in an insurance sales transaction, the CPSI regulation may cover sales of private mortgage insurance. If the depository institution itself purchases the insurance to protect its interest in mortgage loans it has issued and merely passes the costs of the insurance on to the mortgage borrowers, then the transaction is not covered by the regulation. If, however, a consumer has the option of purchasing the private mortgage insurance and (1) the depository institution offers the private mortgage insurance to a consumer or (2) any other person offers the private mortgage insurance to a consumer at an office of a depository institution, or on behalf of a depository institution, the transaction would be covered by the regulation.

3950.0.7.3.2 Applicability to Federal Crop Insurance

The CPSI regulation does not apply to federal crop insurance that is sold for commercial or business purposes. However, if the crop insurance is purchased by an individual primarily for family, personal, or household purposes, it would be covered.

3950.0.7.3.3 Solicitations and Applications Distributed Before, but Returned After, the Effective Date of the CPSI Regulation

Direct-mail solicitations and "take-one" applications that are distributed on or after October 1, 2001, must comply with the CPSI regulation. If a consumer seeks to purchase insurance after the effective date of the regulation in response to a solicitation or advertisement that was distributed *before* that date, the depository institution would be in compliance with the regulation if the institution provides the consumer, before the initial sale, with the disclosures required by the regulation. These disclosures must be both written and oral, except that oral disclosures are not required if the consumer mails in the application.

3950.0.7.4 Renewals of Insurance

Renewals of insurance are not subject to the disclosure requirements (see the 3950.0.7.1 sections above), but are subject to other requirements of the CPSI regulation. A "renewal" of insurance means continuation of coverage involving the same type of insurance for a consumer as issued by the same carrier. A renewal need not be on the same terms and conditions as the original policy, provided that the renewal does not involve a different type of insurance and the consumer has previously received the disclosures required by the regulation at the time of the initial sale. An upgrade in coverage at a time when a policy is not up for renewal would be treated as a renewal, provided that the solicitation and sale of the upgrade do not involve a different type of insurance and the consumer has previously received the disclosures required by the regulation at the initial sale.

3950.0.7.4.1 Disclosures Required with Renewals of Insurance Coverage

The banking agencies' interpretations clarified that the CPSI regulation does not *mandate* disclosures for renewals of policies sold before October 1, 2001. Accordingly, the CPSI regulation does not require the disclosures to be furnished at the time of renewal of a policy, including a pre-existing policy. However, renewals are subject to the other provisions of the CPSI regulation. Moreover, the banking agencies would expect that, consistent with applicable safety-and-soundness requirements, depository institutions would take reasonable steps to avoid customer confusion in connection with renewals of pre-existing policies.

3950.0.7.4.2 ''On-Behalf-of'' Test and Use of Corporate Name or Logo

Under the CPSI regulation, an affiliate of a bank is not considered to be acting ''on behalf of'' a bank simply because the affiliate's marketing or other materials use a corporate name or logo that is common to the bank and the affiliate. In general, this exclusion applies even if a bank and its parent holding company have a similar, but not identical, name. For example, if the names of all of the affiliates of a bank holding company share the words ''First National,'' an affiliate would not be considered to be engaged in an activity ''on behalf of'' an affiliated bank simply by using the terms ''First National'' as part of a corporate logo or identity. The affiliate would, however, be considered to be acting ''on behalf of'' an affiliated bank if the name of the bank (for example, ''First National Bank'') appears in a document as the seller, solicitor, advertiser, or offeror of insurance. A transaction also would be covered if it occurs on the premises of a depository institution or if one of the other prongs of the ''on-behalf-of'' test is met.

3950.0.7.5 Compliance

3950.0.7.5.1 Appropriate Documentation of an Oral Disclosure or Oral Acknowledgment

There is no specific documentation requirement for oral disclosures or acknowledgments. However, other applicable regulatory reporting standards would apply. Appropriate documentation of an oral disclosure would clearly show that the covered person made the credit and insurance disclosures to a consumer. Similarly, appropriate documentation of an oral acknowledgment would clearly show that the consumer acknowledged receiving the credit and insurance disclosures. For example, a tape recording of the conversation (where permitted by applicable laws) in which the covered person made the oral disclosures and received the oral acknowledgment would be acceptable. Another example would be a contemporaneous checklist completed by the covered person to indicate that he or she made the oral disclosures and received the oral acknowledgment. A contemporaneous note to the consumer's file would also be adequate. The documentation should be maintained in the consumer's file so that it is accessible to examiners.

3950.0.7.5.2 Setting for Insurance Sales

A depository institution must identify the areas where insurance sales occur and must clearly delineate and distinguish those areas from areas where the depository institution's retail deposit-taking activities occur. Although the banking agencies did not define how depository institutions could ''clearly delineate and distinguish'' insurance areas, signage or other means may be used.

3950.0.8 APPENDIX B—GLOSSARY

See section 4040.1 of the Commercial Bank Examination Manual *for additional definitions of insurance terms.*

Accident and health insurance. A type of coverage that pays benefits in case of sickness, accidental injury, or accidental death. This coverage may provide for loss of income when the insured becomes disabled and provides reimbursement for medical expenses when the insured is ill. The insurance can provide for debt payment if it is taken out in conjunction with a loan. (See *Credit life insurance*.)

Actuary. A professional whose function is to calculate statistically various estimates for the field of insurance, including the estimated risk of loss on an insurable interest and the appropriate level for premiums and reserves.

Admitted insurer. An insurance company licensed by a state insurance department to underwrite insurance products in that state.

Agency contract (or agreement). An agreement that establishes the contractual relationship between an agent and an insurer.

Agent. A licensed insurance company representative under contract to one or more insurance companies. Depending on the line of insurance represented, an agent's power may include soliciting, advertising, and selling insurance; collecting premiums; claims processing; and effecting insurance coverage on behalf of an insurance underwriter. Agents are generally compensated by commissions on policies sold, although some may receive salaries.

1. *Captive or exclusive agent.* An agent who represents a single insurer.
2. *General agents.* An agent who is contractually awarded a specific geographic territory for an individual insurance company. General agents are responsible for building their own agency and usually represent only one insurer. Unlike exclusive agents, who usually receive a salary in addition to commissions, general agents are typically compensated on a commission basis only.
3. *Independent agent.* An agent who is under contractual agreements with at least two different insurers. Typically, all of the independent's agent's compensation originates from commissions.

Aggregate excess-of-loss reinsurance. A form of ''excess-of-loss'' reinsurance that indemnifies the ceding company against the amount by which all of the ceding company's losses incurred during a specific period (usually 12 months) exceed either (1) a predetermined dollar amount or (2) a percentage of the company's subject premiums. This type of contract is also commonly referred to as stop-loss reinsurance or excess-of-loss ratio reinsurance.

Allied lines. Various insurance coverages for additional types of losses and against losses by additional perils. The coverages are closely associated with and usually sold with fire insurance. Examples include coverage against loss by perils other than fire, coverage for sprinkler-leakage damage, and business-interruption coverage.

Annuity. A contract that provides for a series of payments payable over an individual's life span or other term, on the basis of an initial lump-sum contribution or series of payments made by the annuitant into the annuity during the accumulation phase of the contract.

1. *Fixed-annuity contracts* provide for payments to annuitants at fixed, guaranteed minimum rates of interests.
2. *Variable-annuity contracts* provide for payments based on the performance of annuity investments. Variable-annuity contracts are usually sold based on a series of payments and offer a range of investment or funding options such as stocks, bonds, and money market fund investments. The annuity principal and the investment return are not guaranteed as they depend on the performance of the underlying funding option.

Annuity payments may commence with the execution of the annuity contract (*immediate annuity*) or may be deferred until some future date (*deferred annuity*).

Assigned risk. A risk that is not usually acceptable to insurers and is therefore assigned to a group of insurers who are required to share in the premium income and losses, in accordance with state requirements, in order for the insurer to sell insurance in the state.

Assignment. The legal transfer of one person's interest in an insurance policy to another person or business.

Bank-owned life insurance (BOLI). Life insurance purchased and owned by a BHC or bank to fund its exposure arising from employee compensation and benefit programs. In a typical BOLI program, a BHC or bank insures a group of employees; pays the life insurance policy premiums; owns the cash values of the policies, which are booked on the BHC's or bank's balance sheet as ''other assets''; and is the beneficiary of the policies upon the death of any insured employee or former employee.

Beneficiary. The person or entity named in an insurance policy as the recipient of insurance proceeds upon the policyholder's death or when an endorsement matures. A revocable beneficiary can be changed by the policyholder at any time. An irrevocable beneficiary can be changed by the policyholder only with the written permission of the beneficiary.

Binder. A written or oral agreement, typically issued by an insurer, agent, or broker for property and casualty insurance, to indicate acceptance of a person's application for insurance and to provide interim coverage pending the insurance company's issuance of a binding policy.

Blanket bond. Coverage for an employer for loss incurred as a result of employee dishonesty.

Boiler and machinery insurance. Insurance against the sudden and accidental breakdown of boilers, machinery, and electrical equipment, including coverage for damage to the equipment and property damage, including the property of others. Coverage can be extended to cover consequential losses, including loss from interruption of business.

Broker. A person who represents the insurance buyer in the purchase of insurance. Brokers do not have the power to bind an insurance company to an insurance contract. Once a contract is accepted, the broker is compensated for the transaction through a commission from the insurance company. An individual may be licensed as both a broker and an agent.

Bulk reinsurance. A transaction sometimes defined by statute as any quota-share, surplus aid, or portfolio reinsurance agreement through which an insurer assumes all or a substantial portion of the liability of the reinsured company.

Captive insurer. An insurance company established by a parent firm to insure or reinsure its own risks or the risks of affiliated companies. A captive may also underwrite insurable risks of unaffiliated companies, typically the risks of its customers or employees. For example, a BHC or bank may form a captive insurance company to underwrite its own directors' and officers' risks or to underwrite credit life or private mortgage insurance (third-party risks) related to its lending activities.

Cash surrender value of life insurance. The amount of cash available to a life insurance policyholder upon the voluntary termination of a life insurance policy before it becomes payable by death or maturity.

Casualty insurance. Coverage for the liability arising from third-party claims against the insured for negligent acts or omissions causing bodily injury or property damage.

Cede. To transfer to a reinsurer all or part of the insurance or reinsurance risk underwritten by an insurance company.

Ceding commission. The fee paid to a reinsurance company for assuming the risk of a primary insurance company.

Ceding company (also cedant, reinsured, reassured). The insurer that transfers all or part of the insurance or reinsurance risk it has underwritten to another insurer or reinsurer via a reinsurance agreement.

Cession. The amount of insurance risk transferred to the reinsurer by the ceding company.

Churning. The illegal practice wherein a customer is persuaded to unnecessarily cancel one insurance policy in favor of buying a purportedly superior policy, often using the cash surrender value of the existing policy to pay the early premiums of the new policy. In such a transaction, the salesperson benefits from the additional commission awarded for booking a new policy.

Claim. A request for payment of a loss under the terms of a policy. Claims are payable in the manner suited to the insured risk. Life, property, casualty, health, and liability claims generally are paid in a lump sum after the loss is incurred. Disability and loss-of-time claims are paid periodically during the period of disability or through a discounted lump-sum payment.

Coinsurance. A provision in property and casualty insurance that requires the insured to maintain a specified amount of insurance based on the value of the property insured. Coinsurance clauses are also found in health insurance and require the insured to share a percentage of the loss.

Combination-plan reinsurance. A reinsurance agreement that combines the excess-of-loss and the quota-share forms of coverage within one contract, with the reinsurance premium established as a fixed percentage of the ceding company's subject premium. After deducting the excess recovery on any one loss for one risk, the reinsurer indemnifies the ceding company on the basis of a fixed quota-share percentage. If a loss does not exceed the excess-of-loss retention level, only the quota-share coverage applies.

Commission. The remuneration paid by insurance carriers to insurance agents and brokers for the sale of insurance and annuity products.

Comprehensive personal liability insurance. A type of insurance that reimburses the policyholder if he or she becomes liable to pay money for damage or injury he or she has caused to others. This coverage does not include automobile liability but does include almost every activity of the policyholder, except business operations.

Contractholder. The person, entity, or group to whom an annuity is issued.

Credit for reinsurance. A statutory accounting procedure, set forth under state insurance regulations, that permits a ceding company to treat amounts due from reinsurers as assets, or as offsets to liabilities, on the basis of the reinsurer's status.

Credit life insurance. A term insurance product issued on the life of a debtor that is tied to repayment of a specific loan or indebtedness. Proceeds of a credit life insurance policy are used to extinguish remaining indebtedness at the time of the borrower's death. The term is applied broadly to other forms of credit-related insurance that provide for debt satisfaction in the event of a borrower's disability, accident or illness, and unemployment. Credit life insurance has historically been among the most common BHC and bank insurance products.

Credit score. A number that is based on an analysis of an individual's credit history and that insurers may consider as an indicator of risk for purposes of underwriting insurance. Where not prohibited by state law, insurers may consider a person's credit history when underwriting personal lines.

Debt-cancellation contract/debt-suspension agreement. A loan term or contract between a lender and borrower whereby, for a fee, the lender agrees to cancel or suspend payment on the borrower's loan in the event of the borrower's death, serious injury, unemployment, or other specified events. The Office of the Comptroller of the Currency considers these products to be banking products. State law determines whether these products are bank or insurance products for state-chartered banks and insurance companies.

Deductible. The amount a policyholder agrees to pay toward the total amount of insurance loss. The deductible may apply to each claim for a loss occurrence, such as each automobile accident, or to all claims made during a specified period, as with health insurance.

Directors' and officers' liability insurance. Liability insurance covering a corporation's obligation to reimburse its directors or officers for claims made against them for alleged wrongful acts. It also provides direct coverage for company directors and officers themselves in instances when corporate indemnification is not available.

Direct premiums written. Premiums received by an underwriter for all policies written during a given time period by the insurer, excluding those received through reinsurance assumed.

Direct writer. An insurance company that deals directly with the insured through a salaried representative, as opposed to those insurers that use agents. This term refers to insurers that operate through exclusive agents. In reinsurance, a direct writer is the company that originally underwrites the insurance policies ceded.

Disability income insurance. An insurance product that provides income payment to the insured when his or her income is interrupted or terminated because of illness or accident.

Endowment insurance. A type of life insurance contract under which the insured receives the face value of the policy if he or she survives the endowment period. Otherwise, the beneficiary receives the face value of the policy upon the death of the insured.

Errors and omissions (E&O) liability insurance. Professional liability insurance that covers negligent acts or omissions resulting in loss. Insurance agents are continually exposed to the claim that inadequate or inappropriate coverage was recommended resulting in a lack of coverage for losses incurred. The agent or the carrier may be responsible for coverage for legitimate claims.

Excess-of-loss reinsurance. A form of reinsurance whereby an insurer pays the amount of each claim for each risk up to a limit determined in advance, and the reinsurer pays the amount of the claim above that limit up to a specific sum. It includes various types of reinsurance, such as catastrophe reinsurance, per-risk reinsurance, per-occurrence reinsurance, and aggregate excess-of-loss reinsurance.

Excess-per-risk reinsurance. A form of excess-of-loss reinsurance that, subject to a specified limit, indemnifies the ceding company against the amount of loss in excess of a specified retention for each risk involved in each occurrence.

Excess and surplus lines. Property/casualty coverage that is unavailable from insurers licensed by the state (admitted insurers) and must be purchased from a nonadmitted underwriter.

Exposure. The aggregate of all policyholder limits of liability arising from policies written.

Face amount. The amount stated on the face of the insurance policy to be paid, depending on the type of coverage, upon death or maturity. It does not include dividend additions or additional amounts payable under accidental death or other special provisions.

Facultative reinsurance. Reinsurance of individual risks by offer and acceptance wherein the reinsurer retains the faculty to accept or reject each risk offered by the ceding company.

Financial guarantee insurance. Financial guarantee insurance is provided for a wide array of financial risks. Typically, coverage is provided for the fulfillment of a specific financial obligation originated in a business transaction. The insurer, in effect, is lending the debtor its own credit rating to enhance the debtor's creditworthiness.

Financial strength rating. Opinion as to an insurance company's ability to meet its senior policyholder obligations and claims. For many years, the principal rating agency for property and casualty insurers and life insurers has been A.M. Best. Other rating agencies, such as Fitch, Moody's, Standard and Poor's, and Weiss, also rate insurers.

Fixed annuity. See annuity.

Flood insurance. A special insurance policy to protect against the risk of loss or damage to property caused by flooding. Regular homeowners' policies do not pay for damages caused by flooding.

General liability insurance. A broad commercial policy that covers all business liability exposures, such as product liability, completed operations, premises and operations, independent contractors, and other exposures that are not specifically excluded.

Gross premiums written. Total premiums for insurance written during a given period, before deduction for reinsurance ceded.

Group insurance. Insurance coverage typically issued to an employer under a master policy for the benefit of employees. The insurer usually does not condition coverage of the people that make up the group upon satisfactory medical examinations or other requirements. The individual members of the group hold certificates as evidence of their insurance.

Health insurance. An insurance product that provides benefits for medical expenses incurred as a result of sickness or accident. This product may be in the form of traditional indemnity insurance or managed-care plans and may be underwritten on an individual or group basis.

Incurred but not reported (IBNR). The loss-reserve value established by insurance and reinsurance companies in recognition of their liability for future payments on losses that have occurred but have not yet been reported to them. This definition is often erroneously expanded to include adverse loss development on reported claims. The term incurred but not enough reported (IBNER) is being increasingly used to reflect more accurately the adverse development on inadequately reserved reported claims.

Inland marine insurance. A broad field of insurance that covers cargo being shipped by air, truck, or rail. It includes coverage for most property involved in transporting cargo as well as for bridges, tunnels, and communications systems.

Key person life insurance. Life insurance designed to cover the key employees of an employer. It may be written on a group- or an individual-policy basis.

Lapse. The termination or discontinuance of a policy resulting from the insured's failure to pay the premium due.

Liability insurance. Protects policyholders from financial loss due to liability resulting from injuries to other persons or damage to their property.

Lines. A term used in insurance to denote insurance business lines, as in "commercial lines" and "personal lines."

Long-term care insurance. Health insurance designed to supplement the cost of nursing home care or other care facilities in the event of a long-term illness or permanent disability or incapacity.

Managing general agent. A managing general agent (MGA) is a wholesaler of insurance products and services to insurance agents. An MGA receives contractual authority from an insurer to assume many of the insurance company's functions. The MGA may provide insurance products to the public through local insurance agents as well as provide services to an insurance company, including marketing, accounting, data processing, policy maintenance, and claims-monitoring and -processing services. Many insurance companies prefer the MGA distribution and management system for their insurance products because it avoids the high cost of establishing branch offices. Most states require that an MGA be licensed.

Manuscript policy. A policy written to include specific coverage or conditions not provided in a standard policy.

Morbidity. The incidence and severity of illness and disease in a defined class of insured persons.

Mortality. The rate at which members of a group die in a specified period of time or die from a specific illness.

Mortgage guarantee insurance. A product that insures lenders against nonpayment by borrowers. The policies are issued for a specified time period. Lenders who finance more than 80 percent of the property's fair value generally require such insurance.

Mortgage insurance. Life insurance that pays the balance of a mortgage even if the borrower dies. Coverage typically is in the form of term life insurance, with the coverage declining as the debt is paid off.

Multiperil insurance. An insurance contract providing coverage against many perils, usually combining liability and physical damage coverage.

Net premiums written. The amount of gross premiums written, after deduction for premiums ceded to reinsurers.

Ninety-day loss rule. A state requirement for an insurer to establish a loss provision for reinsurance recoverables over 90 days past due.

Obligatory treaty. A reinsurance contract under which business must be ceded in accordance with contract terms and must be accepted by the reinsurer.

Policyholder. The person or entity who owns an insurance policy. This is usually the insured person, but it may also be a relative of the insured, a partnership, or a corporation.

Premium. The payment, or one of the periodic payments, a policyholder agrees to make for insurance coverage.

Private mortgage insurance (PMI). Coverage for a mortgage lender against losses due to a collateral shortfall on a defaulted residential real estate loan. Most BHCs and banks require borrowers to take out a PMI policy if a downpayment of less than 20 percent of a home's value is made at the time the loan is originated. PMI does not directly benefit a borrower, although its existence provides the opportunity to purchase a home to many people who otherwise would not qualify for a loan.

Producer. A person licensed to sell, solicit, or negotiate insurance.

Professional designations and organizations. Three of the most common insurance professional designations are Chartered Life Underwriter (CLU), Chartered Property Casualty Underwriter (CPCU), and Chartered Financial Consultant (ChFC). Insurance agents also join professional organizations such as the American Society of Chartered Life Underwriters, the International Association of Financial Planning, the National Association of Life Underwriters, the National Association of Health Underwriters, the American Council of Life Insurance, the Life Insurance Marketing and Research Association, the Life Underwriter Training Council, and the Million Dollar Round Table.

Property insurance. Coverage for physical damage or destruction of real property (building, fixtures, and permanently attached equipment) and personal property (movable items that are not attached to land) that occurs during the policy period as a result of, for example, fire, windstorm, explosion, and vandalism.

Pro rata reinsurance. A generic term describing all forms of ''quota-share'' and ''surplus reinsurance,'' in which the reinsurer shares a pro rata portion of the losses and premiums of the ceding company.

Protected cell. A structure available to captive insurers underwriting risks of unaffiliated companies whereby the assets associated with the self-insurance program of one organization are segregated to provide legal-recourse protection from creditors of protected cells providing insurance coverage to other organizations.

Quota-share reinsurance. A form of pro rata reinsurance indemnifying the ceding company for a fixed percent of loss on each risk covered in the contract in consideration of the same percentage of the premium paid to the ceding company.

Rebating. Directly or indirectly giving or offering to give any portion of the premium or any other consideration to an insurance buyer as an inducement to purchase or renew the insurance. Rebates are forbidden under most state insurance codes.

Reinsurance. Insurance placed by an underwriter (the ceding company or reinsured) in another company to transfer or reduce the amount of the risk assumed under the original insurance policy (or group of policies).

Reinsurance premium. The consideration paid by a ceding company to a reinsurer for the coverage provided by the reinsurer.

Residual market. Also known as the shared market, it covers applications for insurance that were rejected by underwriters in the voluntary market that is covered by agency direct-marketing systems, perhaps because of high loss experience by the insured party. The residual market includes government insurance programs, specialty pools, and shared market mechanisms such as assigned-risk plans.

Retrocession. A reinsurance transaction whereby a reinsurer (the retrocedant) cedes all or part of the reinsurance risks it has assumed to another reinsurer (the retrocessionaire).

Retrospective rating. An insurance plan in which the current year's premium is based on the insured's own loss experience for that same period, subject to a maximum and minimum.

Rider. A written attachment, also known as an endorsement, to an insurance policy that changes the original policy to meet specific requirements, such as increasing or decreasing benefits or providing coverage for specific property items beyond that provided for under the insurance company's standard contract terms.

Self-insured retention (SIR). The percentage of a risk or potential loss assumed by an insured, whether in the form of a deductible, self-insurance, or no insurance at all.

Separate accounts. Certain life insurance assets and related liabilities that are segregated and maintained to meet specific investment objectives of contract holders, particularly those assets and liabilities associated with pension plans and variable products offered by life insurers, wherein the customer and not the insurer retains most of the investment and interest-rate risk.

Split-dollar life insurance. An arrangement that typically involves an agreement between an employer and an employee whereby the premium payment, cash values, policy ownership, and death benefits may be split. There are many variations of split-dollar arrangements, including arrangements in which a trust is created to facilitate estate planning. Split-dollar life insurance is designed to serve as a supplemental benefit to a particular company executive. The arrangement typically involves the payment of the insurance premium by the employer, with the death benefit accruing to the employee.

Subrogation. An insurance carrier may reserve the ''right of subrogation'' in the event of a loss. This means that the company may choose to take action to recover the amount of a claim paid to a covered insured if a third party caused the loss. After expenses, the amount recovered must be divided proportionately with the insured to cover any deductible for which the insured was responsible.

Term life insurance. An insurance product that provides, for a specified period of time, death coverage only. Typically, it has no savings component and, therefore, no cash value. Because term insurance provides only mortality protection, it generally provides the most coverage per premium dollar. Most term life insurance policies are renewable for one or more time periods up to a stipulated maximum age; however, premiums generally increase with the age of the policyholder.

Title insurance. Insurance that protects BHCs, banks, and mortgagees against unknown encumbrances against real estate by indemnifying the mortgagor and property owner in the event that clear ownership of the property is clouded by the discovery of faults in the title. Title insurance policies may be issued to either the mortgagor or the mortgagee or both. Title insurance is written largely only by companies specializing in this class of insurance.

Treaty reinsurance. A reinsurance contract under which the reinsured company agrees to cede, and the reinsurer agrees to assume, risks of a particular class or classes of business.

Twisting. In insurance, twisting involves making misrepresentations to a policyholder to induce the policyholder to terminate one policy and to take out another policy with another company, when it is not to the insured's benefit. Twisting is a violation of the Unfair Trade Practices Act. Twisting is similar to the ''churning'' concept in securities sales, and it results in increased commissions for the inducing agent.

Umbrella liability insurance. This type of liability insurance provides excess liability protection over the ''underlying'' liability insurance coverage to supplement underlying policies that have been reduced or exhausted by loss.

Underwriting. The process by which a company determines whether it can accept an application for insurance and by which it may charge an appropriate premium for those applications selected. For example, the underwriting process for life insurance classifies applicants by identifying such characteristics as age, sex, health, and occupation.

Unearned reinsurance premium. The part of the reinsurance premium that is applicable to the unexpired portion of the policies reinsured.

Universal life insurance. A form of permanent insurance designed to provide flexibility in premium payments and death benefit protection. The policyholder can pay maximum premiums and maintain a high cash surrender value. Alternatively, the policyholder can make minimal payments in an amount only large enough to cover mortality and other expense charges.

Variable annuity. See Annuity.

Variable life insurance. A form of whole life, or universal life, insurance in which the policyholder's cash value is invested in ''separate accounts'' of the insurer. These accounts are segregated from the insurance carrier's other asset holdings. Such separate account investments are generally not available to a carrier's general creditors in the event of the carrier's insolvency. The policyholder assumes the investment and price risk. Because variable life policies have investment features, life insurance agents selling these policies must be registered representatives of a broker-dealer licensed by the National Association of Securities Dealers and registered with the Securities and Exchange Commission.

Vendors' single-interest insurance. A form of force-placed insurance that is typically purchased by the BHC or bank to protect against loss or damage to loan collateral in which the BHC or bank has a security interest. The banking organization passes its expense for this insurance on to the consumer who has either refused or is unable to obtain property insurance.

Viatical settlement. The cashing in of a life insurance policy at a discount from face amount by policyholders who are often terminally ill and need the money for medical care. The purchaser becomes the policyholder as well as the beneficiary and assumes the premium payments of the policy.

Whole life insurance. A fixed-rate insurance product, with premiums and death benefits guaranteed over the duration of the policy. There is a cash value (essentially a savings account) that accrues to the policyholder tax deferred. A policyholder receives the cash value in lieu of death benefits if the policy matures or lapses before the insured's death. A policyholder also may borrow against the policy's accumulated cash value or use it to pay future premiums. For most whole life insurance policies, premiums are constant for the life of the insured's contract.

3950.0.9 INSPECTION OBJECTIVES

1. To understand the volume and complexity of the banking organization's insurance or annuity program and insurance sales strategy.
2. To assess the financial results of the activity compared with planned results.
3. To determine if the insurance and annuity sales activities are effectively integrated into

the banking organization's risk-management, audit, and compliance functions and if the control environment is adequate.
4. To assess the adequacy of the banking organization's controls to ensure compliance with the applicable state and federal laws and regulations.
5. To assess the level and direction of operational, legal, and reputational risks to the consolidated banking organization and the bank from the insurance or annuity sales activity.

The following objectives apply if insurance products or annuities are sold by another person at an office of, or on behalf of, a state member bank subsidiary of the BHC.

6. To assess the adequacy of the BHC's oversight program for ensuring a state member bank's compliance with the Consumer Protection in Sales of Insurance (CPSI) regulation. (See section 3950.0.1.)
7. To assess the effectiveness of the BHC's oversight of a state member bank's compliance and audit programs with respect to the CPSI regulation.
8. To assess the BHC's oversight of a state member bank's compliance with the CPSI regulation.
9. To obtain commitments for a BHC's oversight for needed corrective action when a state member bank is in violation of the CPSI regulation or when applicable policies, procedures, practices, or management oversight to protect against violations is deficient.

3950.0.10 INSPECTION PROCEDURES

3950.0.10.1 Risk Assessment of Insurance and Annuity Sales Activities

The examiner should consider the following procedures, as appropriate, when conducting a risk assessment to determine the level and direction of risk exposure to the BHC that is attributable to insurance or annuity sales activity. If there are specific areas of concern, the examiner should focus primarily on those areas.

1. *Scope of activities and strategies.* Assess the significance and complexity of the insurance or annuity sales program.
   a. Obtain a general overview of the scope of the BHC's insurance or annuity sales activities and any anticipated or recent change in or expansion of such activities.
   b. Determine the BHC's strategy for insurance or annuity sales, including strategies for cross-selling and referrals of insurance and banking products. Determine the institution's experience with any cross-marketing programs for both insurance business generated by the BHC and business generated by insurance producers.
   c. Obtain two years' worth of income statements, balance sheets, and budget documents for the agency's activities. Compare the expected budget items with their actual results.
   d. Determine the volume and type of insurance or annuity products and services sold or solicited.
   e. Determine what other related services the BHC provides in connection with its insurance or annuity sales activities, such as providing risk-management services to clients seeking advice on appropriate insurance coverages, claims processing, and other activities.
   f. If the BHC is not an FHC, confirm that any insurance sales activities conducted by the BHC or a nonbank subsidiary are within the limited scope of activities permissible for BHCs that are not FHCs.
2. *Insurance sales products and concentrations.*
   a. Determine the composition of sales—
      - by line of business, such as property/casualty insurance, life insurance including annuities, and health insurance;
      - by the proportion of sales to commercial and retail customers; and
      - by the portion of sales that is credit related, such as credit life and credit health insurance.
   b. Determine any sales concentrations to particular entities, industries, or BHC customers.
   c. Note any concentrations to large commercial accounts.
   d. Determine what insurance services are provided to the BHC, its employees, and BHC or bank affiliates.
3. *Legal-entity and the risk-management structure for insurance or annuity sales.*
   a. Obtain an organizational chart for the legal-entity and risk-management structure for the insurance or annuity sales activities.
   b. Determine—

- whether the insurance or annuity sales activity is conducted in an affiliated producer, by the BHC itself, through another distribution arrangement, or by a combination of these entities;
- the names of any affiliated insurance agencies and the states where the affiliated insurance agencies are licensed; and
- the locations outside of the United States where insurance or annuities are sold or solicited.

c. Determine if the insurance or annuity producer is acting as a managing general agent (MGA).[17] If so, determine —
- the scope of the MGA activities;
- the BHC management's assessment of the risk associated with the MGA activity; and
- what risk controls are in place to protect the BHC from potential loss that may arise from the MGA's activities, such as loss arising from legal liability.

4. *Strategic and financial plans.* Assess management controls over the insurance annuity sales activities.
   a. Ascertain the BHC management's strategic and financial plans and goals for the insurance or annuity sales activity.
   b. Review the BHC's due-diligence process for acquiring and pricing agencies, if applicable.
   c. Review the BHC's financial budgets and forecasts for the activity, particularly plans for new products, marketing strategies, and marketing arrangements, and the rate of actual and expected growth for the activity.
   d. Determine the cause for significant deviations from the plan.
   e. Determine if any agency acquired by the state member bank is providing the expected return on investment and if the agency's revenues are covering the debt servicing associated with the purchase, if applicable.
5. *Review of board and committee records and reports.*
   a. Review the reports of any significant BHC oversight committees, including relevant board of directors' and board committees' minutes and risk-management reports.
   b. Determine if the BHC's board of directors, a board committee, or senior management reviews reports pertaining to consumer complaints and complaint resolution, information pertaining to litigation and associated losses, and performance compared with the organization's plan for the insurance and annuity sales activities.
6. *Policies and procedures.*
   a. Determine—
      - the adequacy of the BHC's policies and procedures for conducting and monitoring insurance or annuity sales activities, including those policies designed to ensure adherence with federal and state laws and regulations pertaining to consumer protection;
      - whether there are appropriate policies and procedures for the handling of customer funds collected on behalf of the underwriter; accurate and timely financial reporting; complaint monitoring and resolution; effective system security and disaster-recovery plans; and policy-exception tracking and reporting, and
      - if the board of directors or a designated committee of the board has formally approved the policies.
   b. Obtain a detailed balance sheet for agency subsidiaries, and determine if the assets held by insurance or annuity agency subsidiaries of BHCs and banks are all eligible investments.
   c. Determine the independence of the BHC's audit program applicable to the insurance and annuity sales activity. Ascertain if the audit program's scope, frequency, and resources are commensurate with the insurance and annuity activities conducted.
   d. Determine how the BHC selects insurance underwriters with whom to do business, as well as how the banking organization monitors the continuing performance of the underwriters.
   e. Determine the adequacy of the BHC board of directors' oversight of the insurance management team's qualifications, the training and licensing of personnel, and general compliance with state insurance regulations.

17. MGAs do not assume underwriting risk. Through contractual arrangements with an insurer, MGAs have the authority to write policies on behalf of the insurer in certain instances, thereby binding the insurer to the policy. Certain minimum provisions governing MGA agreements are delineated in the applicable National Association of Insurance Commissioners (NAIC) model law.

f. Review the internal controls of the BHC related to third-party arrangements, including arrangements for sales, processing, and auditing of insurance and annuity activities.

7. *Claims, litigation, and functional regulator supervision.* Assess legal and reputational risk.
   a. Identify any significant litigation against the BHC arising from its insurance or annuity sales activity and the likely impact of the litigation on the BHC.
   b. Obtain the insurance agency's errors and omissions claims records for the past several years, including a listing of claims it has made and the amount of claims, the claim status, and the amount of claim payments.
   c. Review the BHC's policies and procedures for tracking and resolving claims. Determine if the policies and procedures appear adequate and if they are adhered to.
   d. Determine if the applicable functional regulator has any outstanding supervisory issues with the insurance agency.
8. *Consumer complaints.*
   a. Determine if the BHC's management has policies and procedures in place to assess whether consumer complaints received are likely to expose the BHC to regulatory action, litigation, reputational damage, or other significant risk.
   b. Obtain applicable consumer complaint files, and evaluate internal control procedures to ensure the complaints are being adequately addressed.
9. *Audit and compliance functions.*
   a. Determine the date of the most recent review of the insurance or annuity sales activities by the audit and compliance functions.
   b. Determine the adequacy of the BHC's management policies and procedures for ensuring that any deficiencies noted in such reviews are corrected, and ascertain whether any such deficiencies are being adequately addressed.[18]
10. *Insurance underwriter oversight of agent/agency activities.*
   a. Determine if the banking organization has adequate policies and procedures to review and resolve any issues or concerns raised by an insurance underwriter regarding the producers used by, or affiliated with, the BHC.[19]
   b. Determine whether any of the insurance underwriters conducted a periodic review of producers that they engaged to sell insurance.
11. *State supervisory insurance authorities.*
   a. During discussions with the BHC's management, determine whether state insurance regulators have raised any issues or concerns in correspondence or reports.
   b. Consult with the state insurance regulator (or regulators), as appropriate, to determine any significant supervisory issues, actions, or investigations. (For multistate agencies, contacts with states may be prioritized on basis of the location of the agency's head office or by a determination of the significance of sales by state. Both financial examinations and market conduct examinations conducted by the state insurance departments are targeted at insurance underwriters, not agencies. Therefore, information available from the states pertaining to agencies may be very limited.)
12. *Operational risk assessment.* Ascertain from BHC management whether there are—
   a. any significant operational problems or concerns relating to insurance or annuity sales activities;
   b. policies and procedures in place to ensure accurate and timely reporting to the BHC's management of insurance or annuity sales activity plans, financial results, and significant consumer complaints or lawsuits or compliance issues, such as errors and omissions claims;[20]
   c. appropriate policies and procedures at the BHC to ensure accurate reporting of

18. Enforcement of the privacy provisions of the GLB Act as they relate to state member banks is the responsibility of the Board's Division of Consumer and Community Affairs. However, enforcement of the privacy provisions of the GLB Act with respect to the insurance activities of nondepository subsidiaries of a state member bank is the responsibility of the state insurance regulators.

19. Insurance underwriters generally have procedures to determine whether individual producers affiliated with agencies are selling the underwriters' products in conformance with applicable laws and regulations. These reviews' findings and conclusions should be available to the state member bank's management.

20. Errors and omissions insurance should be in place to protect the state member bank against loss sustained because of an error or oversight, such as failure to issue an insurance policy. A tracking system to monitor errors and omission claims should be in place and monitored by the state member bank, as appropriate. See section 4040.1, "Management of Insurable Risks," of the *Commercial Bank Examination Manual*.

insurance or annuity sales activity on Federal Reserve regulatory reports (Determine from applicable Board or Reserve Bank contacts if there are any outstanding issues with respect to potential reporting errors on submitted Federal Reserve reports, BHC and bank call reports, or other applicable reports. If so, seek resolution of the issues); and

d. adequate disaster-recovery plans and procedures to protect the BHC from loss of data related to insurance or annuity sales activities.

3950.0.10.2 Consumer Protection in Sales of Insurance Regulation

These examination procedures apply only to the examination of state member banks. The procedures are provided for the BHC examiner's information only.

The following procedures should be risk-focused in accordance with the Federal Reserve's risk-focused framework for supervising banking organizations. The procedures should be carried out as necessary to adequately assess the state member bank's compliance with the Consumer Protection in Sales of Insurance (CPSI) regulation.

1. Determine the role of the state member bank's board of directors and management in ensuring compliance with the CPSI regulation and applicable state consumer regulations.
2. Evaluate the management information system (MIS) reports the state member bank's board or designated committee relies on to monitor compliance with the consumer regulations and to track complaints and complaint resolution.
3. Review the state member bank's policies and procedures to ensure they are consistent with the CPSI regulation, and conduct transaction testing, as necessary, in the following areas:[21]
   a. disclosures, advertising, and promotional materials
   b. consumer acknowledgments
   c. physical separation from areas of deposit-taking activities
   d. qualifications and licensing for insurance personnel
   e. compliance programs and internal audits
   f. hiring, training, and supervision of insurance or annuity sales personnel employed directly by the state member bank, or of third parties selling insurance or annuity products at a state member bank office or on behalf of the state member bank
   g. compensation practices and training for personnel making referrals
4. If a third party sells insurance or annuities at the state member bank's offices or on behalf of the state member bank, review the state member bank's policies and procedures for ensuring that the third party complies with the CPSI regulation and other relevant policies and procedures of the bank.
5. Review the state member bank's process for identifying and resolving consumer complaints related to the sale of insurance products and annuities.
6. Obtain and review the record of consumer complaints related to the CPSI regulation. These records are available from the Board's Division of Consumer and Community Affairs' database. (See CP letter 2001-11.)
7. Include examination findings, as appropriate, in the commercial bank examination report or in other communications to the bank, as appropriate, that pertain to safety-and-soundness reviews of the bank.

21. If the examiner determines that transaction testing of a functionally regulated nonbank affiliate of the state member bank is appropriate in order to determine the state member bank's compliance with the CPSI regulation, the examiner should first consult with and obtain approval from appropriate staff of the Board's Division of Banking Supervision and Regulation.

3950.0.11 INTERNAL CONTROL QUESTIONNAIRE

3950.0.11.1 Risk Assessment of Insurance and Annuity Sales Activities

3950.0.11.1.1 Program Management

1. Does the BHC have a comprehensive program to ensure that its insurance and annuity sales activities are conducted in a safe and sound manner?
2. Does the BHC have appropriate written policies and procedures commensurate with the volume and complexity of the insurance or annuity sales activities?
3. Has management obtained the approval of the board of directors for the program scope and the associated policies and procedures?
4. Have reasonable precautions been taken to ensure that disclosures to customers for

insurance or annuity sales and solicitations are complete and accurate and are in compliance with applicable laws and regulations?
5. Does the BHC's management effectively oversee the insurance or annuity sales activities, including those involving third parties?
6. Does the BHC have an effective independent internal audit and compliance program in place to monitor retail sales of insurance or annuity products?
7. Does the BHC appropriately train and supervise employees conducting insurance or annuity sales activities?

3950.0.11.1.2 Management Information Systems

8. Does the BHC's insurance program management plan establish the appropriate management information systems (MIS) necessary for the banking organization's board of directors to properly oversee the insurance or annuity sales activities?
9. Does the MIS provide sufficient information to allow for the evaluation and measurement of the effect of actions taken to identify, track, and resolve any issues relative to compliance with the CPSI regulation?
10. Does the MIS include sales volumes and trends, profitability, policy exceptions and associated controls, customer complaints, and other information providing evidence of compliance with laws and established policies?

3950.0.11.1.3 Compliance Programs and Internal Audits

11. Are there policies and procedures in place to ensure that insurance or annuity sales activities are conducted in compliance with applicable laws and regulations?
12. Do compliance procedures identify potential conflicts of interest and how such conflicts should be addressed?
13. Do the compliance procedures provide a system to monitor customer complaints and track their resolution?
14. When applicable, do compliance procedures call for verification that third-party sales are being conducted in a manner consistent with the agreement governing the third party's arrangement with the BHC?
15. Is the compliance function conducted independently of the insurance or annuity sales and management activities?
16. Do compliance personnel determine the scope and frequency of the insurance-product review?
17. Are findings of insurance or annuity sales activity compliance reviews periodically reported directly to the BHC's board of directors or a designated committee thereof?

3950.0.11.2 Consumer Protection in Sales of Insurance Regulation

This internal control questionnaire applies only to the examination of state member banks. It is provided for the BHC examiner's information only.

If applicable, review the state member bank's internal controls, policies, practices, and procedures for retail insurance or annuity sales activities conducted by the bank on bank premises or on behalf of the bank. The bank's program management for such activities should be well documented and should include appropriate personnel training, as well as compliance and audit-function coverage of all efforts to ensure compliance with the provisions of the Board's CPSI regulation.

3950.0.11.2.1 Advertising and Promotional Materials

1. Do advertising materials associated with the insurance or annuity sales program create an erroneous belief that—
   a. an insurance product or annuity sold or offered for sale by the state member bank, or on behalf of the bank, is backed by the federal government or the bank, or that the product is insured by the FDIC?
   b. an insurance product or annuity that involves investment risk does not, in fact, have investment risk, including the potential that principal may be lost and the product may decline in value?
2. Does a review of advertising for insurance products or annuities sold or offered for sale create an erroneous impression that—
   a. the state member bank or an affiliate or subsidiary may condition the grant of an extension of credit to a consumer on the purchase of an insurance product or

annuity by the consumer from the bank or an affiliate or subsidiary of the bank?
b. the consumer is not free to purchase an insurance product or annuity from another source?

3950.0.11.2.2 Disclosures

3. In connection with the initial purchase of an insurance product or annuity by a consumer, does the initial disclosure to the consumer, except to the extent the disclosure would not be accurate, state that—
   a. the insurance product or annuity is not a deposit or other obligation of, or is not guaranteed by, the state member bank or an affiliate of the bank?
   b. the insurance product or annuity is not insured by the FDIC or any other agency of the United States, the state member bank, or (if applicable) an affiliate of the bank?
   c. in the case of an insurance product or annuity that involves an investment risk, there is risk associated with the product, including the possible loss of value?
4. In the case of an application for credit, in connection with which an insurance product or annuity is solicited, offered, or sold, is a disclosure made that the state member bank may not condition an extension of credit on either—
   a. the consumer's purchase of an insurance product or annuity from the bank or any of its affiliates?
   b. the consumer's agreement not to obtain, or a prohibition on the consumer's obtaining, an insurance product or annuity from an unaffiliated entity?
5. Are the disclosures under question 3 above provided orally and in writing before the completion of the initial face-to-face sale of an insurance product or annuity to a consumer?
6. Are the disclosures under question 4 above made orally and in writing at the time the consumer applies in a face-to-face interaction for an extension of credit in connection with which insurance is solicited, offered, or sold?
7. If a sale of an insurance product or annuity is conducted by telephone, are the disclosures under question 3 above provided in writing, by mail, within three business days?
8. If an application for credit is made by telephone, are the disclosures under question 4 above provided by mail to the consumer within three business days?
9. Are the disclosures under questions 3 and 4 above provided through electronic media instead of on paper, only if the consumer affirmatively consents to receiving the disclosures electronically, and only if the disclosures are provided in a format that the consumer may retain or obtain later?
10. Are disclosures made through electronic media, for which paper or oral disclosures are not required, presented in a meaningful form and format?
11. Are disclosures conspicuous, simple, direct, readily understandable, and designed to call attention to the nature and significance of the information provided?
12. Are required disclosures presented in a meaningful form and format?

3950.0.11.2.3 Consumer Acknowledgment

13. At the time a consumer receives the required disclosures, or at the time of the consumer's initial purchase of an insurance product or annuity, is a written acknowledgment from the consumer that affirms receipt of the disclosures obtained?
14. If the required disclosures are provided in connection with a transaction that is conducted by telephone—
    a. has an oral acknowledgment of receipt of the disclosures been obtained and is sufficient documentation maintained to show that the acknowledgment was given?
    b. have reasonable efforts to obtain a written acknowledgment from the consumer been made?

3950.0.11.2.4 Physical Separation from Deposit Activities

15. Does the state member bank, to the extent practicable—
    a. keep the area where the bank conducts transactions involving the retail sale of insurance products or annuities physically segregated from the areas where retail deposits are routinely accepted from the general public?
    b. identify the areas where insurance product or annuity sales activities occur?
    c. clearly delineate and distinguish insurance and annuity sales areas from the

areas where the bank's retail deposit-taking activities occur?

3950.0.11.2.5 Qualifications and Licensing

16. Does the state member bank permit any person to sell or offer for sale any insurance product or annuity in any part of its office or on its behalf, only if the person is at all times appropriately qualified and licensed under applicable state insurance licensing standards for the specific products being sold or recommended?

3950.0.11.2.6 Hiring, Training, and Supervision

17. Have background investigations of prospective employees that will sell insurance products or annuities been completed?
18. When a candidate for employment has previous insurance experience, has a review to determine whether the individual has been the subject of any disciplinary actions by state insurance regulators been completed?
19. Do all insurance or annuity sales personnel or third-party sales personnel conducting sales activities at or on behalf of the state member bank receive appropriate training and continue to meet licensing requirements?
20. Does training address policies and procedures for sales of insurance and annuity products, and does it cover personnel making referrals to a licensed insurance producer?
21. Does training ensure that personnel making referrals about insurance products or annuities are properly handling all inquiries so as not to be deemed to be acting as unlicensed insurance agents or registered (or equivalently trained) securities sales representatives (for insurance products that are also securities) if they are not qualified?
22. When insurance products or annuities are sold by the bank or third parties at an office of, or on behalf of, the organization, does the institution have policies and procedures to designate, by title or name, the individuals responsible for supervising insurance sales activities, as well as the referral activities of bank employees not authorized to sell these products?
23. Does the bank designate supervisory personnel responsible for monitoring compliance with any third-party agreement, as well as with the CPSI regulation?

3950.0.11.2.7 Referrals

24. Are fees paid to nonlicensed personnel who are making referrals to qualified insurance or annuity salespersons limited to a one-time, nominal fee of a fixed dollar amount for each referral, and is the fee unrelated to whether the referral results in a sales transaction?

3950.0.11.2.8 Third-Party Agreements

25. Does the state member bank's management conduct a comprehensive review of a third party before entering into any arrangement to conduct insurance or annuity sales activities through the third party?
26. Does the review include an assessment of the third party's financial condition, management experience, reputation, and ability to fulfill its contractual obligations to the bank, including compliance with applicable consumer protection laws and regulations?
27. Does the board of directors or a designated committee thereof approve any agreement with the third party?
28. Does the agreement outline the duties and responsibilities of each party; describe the third-party activities permitted on the institution's premises; address the sharing or use of confidential customer information; and define the terms for use of the bank's office space, equipment, and personnel?
29. Does the third-party agreement specify that the third party will comply with all applicable laws and regulations and will conduct its activities in a manner consistent with the CPSI regulation, if applicable?
30. Does the agreement authorize the bank to monitor a third party's compliance with the agreement, as well as to have access to third-party records considered necessary to evaluate compliance?
31. Does the agreement provide for indemnification of the institution by the third party for any losses caused by the conduct of the third party's employees in connection with its insurance or annuity sales activities?
32. If an arrangement includes dual employees, does the agreement provide for written employment contracts that specify the duties of these employees and their compensation arrangements?

33. If the bank contracts with a functionally regulated third party, does the bank obtain, as appropriate, any relevant regulatory reports of examination of the third party?
34. How does the bank ensure that a third party selling insurance or annuity products at or on behalf of the bank complies with all applicable regulations, including the CPSI regulation?
35. How does the bank ensure that any third party or dual employee selling insurance or annuity products at or on behalf of the bank is appropriately trained to comply with the minimum disclosures and other requirements of the Board's CPSI regulation and applicable state regulations?
36. Does the bank obtain and review copies of third-party training and compliance materials to monitor the third party's performance regarding its disclosure and training obligations?

3950.0.11.2.9 Consumer Complaints

37. Does the state member bank have policies and procedures for handling customer complaints related to insurance and annuity sales?
38. Does the customer complaint process provide for the recording and tracking of all complaints?
39. Does the state member bank require periodic reviews of complaints by compliance personnel? Is a review by the state member bank's board and senior management required for significant compliance issues that may pose risk to the bank?

The analysis of financial factors should be conducted in four primary parts, namely: (1) parent only, (2) banking subsidiary(ies), (3) nonbank subsidiary(ies), and (4) consolidated organization. In view of the fact that all BHCs are not structured in the same organizational and financial manner, it is important that examiners be flexible in their approach and be judicious in their use of ratio analysis and peer group comparisons. There is no substitute for using sound judgment and creativity while performing an analysis, providing all of the pertinent information is available. The summary and conclusions should follow from the information presented in the analysis.

The analysis is intended to determine the financial strengths and weaknesses of an organization and the impact of conditions at the parent company and nonbank subsidiary which could adversely affect the condition of the banking subsidiary. As a regulatory agency, a goal of the Federal Reserve System is to safeguard and protect the soundness of commercial banks. The System oversees holding company banking and nonbanking activities to assure the continued safety and soundness of individual banks and the industry as a whole.

The analysis of financial factors resulting from the inspection of a bank holding company is essentially a finding of facts and an expression of judgment. In conducting an appraisal of a holding company's condition, the financial analysis of the organization, based on a ''building block'' or ''component'' approach, should provide the examiner with a solid foundation from which to proceed. In order to complete the analysis it is first necessary to accumulate sufficient information concerning the parent company, bank and nonbanking subsidiary(ies) and the consolidated organization. A final analysis should not be attempted until these integral parts have been thoroughly reviewed.

The completion of the financial analysis will culminate with the preparation of a rating for the bank holding company. Manual section 4070.0, entitled ''Bank Holding Company Rating System,'' presents the rating system in its entirety.

4010.0.1 INTRODUCTION AND SCOPE OF THE ANALYSIS

The cash flow analysis is *applicable to all bank holding companies with consolidated assets in excess of $1 billion, those that have substantive fixed charges or debt outstanding,* as well as select others at the option of the Reserve Bank. Key parts of the analysis involve the use of:

1. A standardized ''Cash Flow Statement (Parent)'' page (refer to manual sections 5010.23 and 5020.13 for the illustrated pages) which includes computation of the cash earnings coverage ratios and analyses; regarding the results;
2. Earnings cash flow coverage ratios to measure the parent company's ability:
   a. To pay its fixed charges, including interest costs, lease expense, income taxes, retirement of long-term debt (including sinking fund provisions), and preferred stock cash dividends, and
   b. To pay common stock cash dividends.
3. Guidelines for supervisory determination of parent company debt servicing capacity.

The cash flow statement page of the inspection report presents the cash earnings and the cash expenditures of the parent company. Within the statement are the key components to be used in the ''Fixed Charge Coverage Ratio,'' which measures the parent company's ability to meet its fixed obligations, and a ''Common Stock Cash Dividend Coverage Ratio'' which measures the ability of the remaining, or residual, earnings to cover common stock dividends.

4010.0.2 CASH FLOW STATEMENT

The cash flow statement is an effective tool used in understanding how a particular bank holding company operates. Its primary objective is to summarize the financing and investing activities of the holding company, including the extent to which the entity has generated funds (externally and internally) during the period. The cash flow statement is related to both the income statement and the balance sheet and provides information that otherwise can be obtained only partially by interpreting each of those statements.

An analysis of past cash flow statements can supply important information regarding the uses of funds, such as internal asset growth or acquisitions, as well as data on the sources of funds used and the financing needs of management. A projected cash flow statement will focus on the need for future funds, its applications, and the sources from which they are likely to be available.

Specifically, the analysis of the cash flow statement is necessary for a thorough understanding of a bank holding company and the nature of its operations to the extent that it provides information on such areas as:

1. Utilization of funds provided by operations;
2. Use of funds from a new debt issue or sale of stock;
3. Source of funds used for acquisitions or additional capital contributions;
4. Means of payment of a dividend in the face of an operating loss;
5. Means of debt repayment and stock redemption.

While the cash flow statement provides an overall perspective of a holding company's utilization of available funds, it does not, by itself, indicate possible or actual difficulties the parent company may have in meeting its fixed obligations from internally generated funds. Fixed obligations or fixed charges are those recurring expenses which must be paid as they fall due, which includes interest expense, lease expense, sinking fund requirements, scheduled debt repayments and preferred dividends.

One ratio that may be used to calculate the strength of a parent company's earnings to meet its fixed charges or obligations is the *Fixed Charge Coverage Ratio* (FCCR). The components of the ratio are included on the ''Cash Flow Statement (Parent)'' page. The Fixed Charge Coverage Ratio (FCCR) measures the parent company's ability to pay for *fixed* contractual obligations if management is to *retain control of the organization,* thereby satisfying the expectation of creditors and preferred stockholders. Net income *after taxes* is used in the formula. Interest and lease expenses are already deducted to arrive at the net income figure and must be added back to obtain the earnings available to pay such charges. Interest expense is usually the largest component among all ''fixed charges,'' and the ability to pay this expense from earnings cash flow is critical to an assurance of continued refunding of the parent company's debt. It measures not only the extent to which net cash operating earnings covers the debt servicing requirements of the parent company, but the capacity to pay income taxes and preferred stock cash dividends as well, thereby meeting the expectations that creditors and preferred shareholders have for the protection of their respective interests. The need for *better than a 1:1* coverage is therefore critical.

Another important formula, required to be calculated is the *Common Stock Cash Dividend Coverage Ratio* (CSCDCR) which measures the ability of the parent company to pay common stock cash dividends. The CSCDCR will show, in turn, whether the residual cash earnings of the parent company are sufficient to pay the common stock cash dividend and, if not, the amount that must be provided from other sources of cash, such as the liquidation of assets or additional borrowings, to cover the shortfall.

Significant shortfalls in the CSCDCR are to be scrutinized in light of the Board's November 1985 Policy Statement on ''Cash Dividends Not Fully Covered by Earnings.'' According to the statement, a bank holding company should not maintain its existing rate of cash dividends on common stock unless:

1. The holding company's net income available to common stockholders over the past year has been sufficient to fully fund the dividends; *and*
2. The prospective rate of earnings retention appears consistent with the organization's capital needs, asset quality, and overall financial condition.

A bank holding company whose cash dividends are inconsistent with the above criteria is to give serious consideration to cutting or eliminating its dividends. The need for *at least a 1:1 coverage* is therefore critical.

The two ratios[1] are calculated as follows:

$$\text{FCCR} = \frac{\text{After tax cash income (1)} + \text{interest expense (2)} + \text{lease \& rental expense (3)}}{\text{interest expense (2)} + \text{lease \& rental expense (3)} + \text{contractual long-term debt retired (4)} + \text{preferred stock dividend payments (5)}}$$

$$\text{CSCDCR} = \frac{\text{After tax cash income (1)} - [\text{Contractual long-term debt retired (4)} + \text{preferred stock dividend payments (5)}]}{\text{Common Stock Dividend Payments (6)}}$$

Note that the Cash Flow Statement (Parent) page presents only cash items included in the parent's income and therefore the analyst can use its income figures without any need to adjust for noncash items.

Both the Fixed Charge Coverage and the Common Stock Cash Dividends Coverage ratios are considered inadequate at less than 1:1. If a holding company is generating funds which provide at least dollar-for-dollar coverage, no criticism need be made. However, the examiner should be aware that these ratios, as well as others, are merely guidelines and good judgment must prevail. A ratio of 1.02:1 may pass the test, but it is only barely adequate. No criticism may necessarily be warranted for the period covered by the 1.02:1 ratio, but it may be indicative of a deteriorating trend over the past few years. Accordingly, an appropriate comment concerning the trend may be warranted.

When reviewing these ratios, it should be kept in mind that certain components in the numerator can to some degree be altered at the discretion of management. For example, by altering the dividends paid by bank subsidiaries, the amount of funds available to the parent to cover fixed charges can be increased or decreased. For this reason, the fixed charge and funds flow ratios should be analyzed in conjunction with a review of the dividend payout ratios of the subsidiary banks. Cash flow ratios that otherwise appear adequate may be a cause for concern if the banks are paying out dividends that are too high in relation to capital or overall condition. Analysts should evaluate the bank dividend payout ratios in light of the bank's capital and financial condition. Only in this way can the analyst gain a better understanding of the quality of the parent's cash flow and its potential effect on bank subsidiaries.

Ratios of less than 1:1 coverage show that internally generated funds are not sufficient to meet a parent company's needs. In many cases, the examiner may find low coverage ratios yet all fixed charges were paid as agreed. Had they not been, the company would have incurred severe financial difficulties long before the start of the inspection. Therefore, when less than adequate ratios appear and obligations are paid

1. The numbered ( ) items correspond to the numbered lines on the ''Cash Flow Statement (Parent)'' page.

on time, the examiner must determine what other source of funds was utilized to make up the shortfall and to permit the timely payment of obligations.

4010.0.3 SUPERVISORY DETERMINATION AS TO ADEQUACY OF PARENT COMPANY CASH FLOW

A supervisory determination about the adequacy of parent company cash flow, and its use as a measure of parent company debt servicing capacity, requires more information than just the results of the Fixed Charge Coverage and Common Stock Cash Dividend Coverage Ratios. The typical major parent company does not generate an earnings cash flow by conducting banking operations itself, although it nevertheless may incur a heavy external debt on behalf of its operating subsidiaries which are the generators of the actual earnings cash flow. Therefore, the parent company earnings cash flow may not be indicative of the *actual* earnings power of the entire banking organization. For example, the cash earnings of the parent company may be kept low by management to avoid State or local income tax liability and/or to increase leveraged lending volumes at the subsidiary level. Conversely, cash earnings may be forced to the parent company through imprudent levels of upstream cash dividend payments which eventually will endanger the operating subsidiaries and the parent itself.

A supervisory determination about the adequacy of parent company cash flow must take place at *two levels:* (1) by analyzing the results of the two coverage ratios using the net earnings cash flow *realized* by the parent company, *and* (2) by analyzing the effect that upstream cash flow to the parent company has had, and can be expected to have, on the financial condition of the bank subsidiaries and the significant nonbank subsidiaries. The latter focus should be on significant nonbank subsidiaries whose capital and dividend policies are subject to separate regulation—such as thrifts—or subsidiaries with significant external funding, whose creditors presumably monitor capital and dividend policies of the subsidiary.

4010.0.4 SPECIFIC GUIDELINES FOR DEBT SERVICING CAPACITY

The specific guidelines for debt servicing capacity are as follows:

1. The adequacy or inadequacy of parent company cash flow, and thereby the capacity to sustain the parent company's debt, is determined ultimately from the results of the Fixed Charge and Common Stock Cash Dividend Coverage Ratios, and the related analysis of the effects of upstream cash flow on the financial condition of the key subsidiaries.

2. For those parent companies with material amounts of long-term debt, coverage ratios in excess of 1:1 will not necessarily be considered sufficient to sustain the parent company's leverage *unless: first,* the Tier 1 capital positions of the bank subsidiaries are considered adequate; *second,* that the bank holding company's consolidated Tier 1 capital position is considered adequate; and *third,* the parent's liquidity is judged adequate. If that is not the case, then a critical comment on the ''Examiner's Comments'' page should be made regarding the potentially excessive leverage of the parent, as well as that of its subsidiaries. A specific period of time should be established for the management of the bank holding company to submit a capital improvement program acceptable to the System. *Moreover,* where the capital positions, bank and consolidated, are considered adequate but the dividend payout ratios are excessive, it is indicative of a potential future debt servicing problem and should be brought to management's attention. Since the earnings level may not be sustainable, corrective action must be taken within a specified period of time.

3. For coverage ratios of less than 1:1, there is a presumption of a critical comment on the ''Examiner's Comments'' page of the inspection report *unless* the shortfall is prudently planned,[2] insignificant in amount and/or the trend of earnings cash flow and dividend policies clearly point toward a return to sufficient parent company earnings cash flow coverage.

    a. In circumstances where the Tier 1 capital position of *any bank subsidiary* is considered inadequate, a written program of corrective action should be required, including the steps necessary to reestablish positive earnings cash flow coverage at the parent company.

    b. In circumstances where the Tier 1 *consolidated* capital position of the holding company is considered inadequate, a written pro-

2. A planned cash flow shortfall might typically occur when the parent elects to reduce (or not increase) dividends from subsidiaries because it anticipated an excess cash or liquid asset position from certain *external sources* (i.e., stock or debt issuance, dividend reinvestment plans, or tax refunds) sufficient to cover the deficiency.

gram of corrective action should be required, including the steps necessary to reestablish positive earnings cash flow coverage at the parent company.

c. In circumstances where the Tier 1 capital position of *each bank subsidiary* and the consolidated Tier 1 capital position of the bank holding company is considered adequate, but there is a developed trend of inadequate earnings cash flow coverage at the parent company level or excessive dividend payouts from the subsidiaries, a written program of corrective action should be required to reestablish and maintain a positive earnings cash flow at the parent company.

4010.0.5 SOURCES OF FUNDS TO MAKE UP SHORTFALLS

Basically, there are three source categories, other than current earnings, that could be used to make up any deficit: (1) liquidation of assets, (2) proceeds from a stock offering, or (3) borrowed funds. These sources must be thoroughly analyzed to determine the extent they were and could still be utilized. It must be kept in mind that the use of these sources cannot permanently eliminate a shortfall in the flow of funds from current operations. These alternative sources only alleviate temporarily the effects of a shortfall. Nevertheless, a deficit could have been intentionally allowed to occur because the holding company knew of funds coming from these alternate sources. For example, the parent knew of an impending stock sale and cut dividends from subsidiaries significantly. In future years, dividends from subsidiaries could be restored to normal proportions, bringing the ratios up to adequate levels.

At this point, it must be determined what, if any, criticism is necessary when an unplanned shortfall is made up by any of these alternate sources. The necessity of liquidating assets to meet cash needs may warrant a critical comment. The parent's advances to subsidiaries and its investment in marketable securities are considered temporary investments. That is, the holding company may reasonably expect to sell its securities and be repaid on its advances to subsidiaries within a reasonably short period of time. In the case of advances to a problem subsidiary, repayments may not be forthcoming. Nevertheless, if the parent does receive partial payments, such funds are available to meet cash needs. The concern to the examiner is the extent to which such temporary investments can be relied upon before they are fully exhausted. If the continued liquidation of those investments to meet cash needs has fully exhausted the assets or will do so in the near future, then appropriate critical comments are warranted. Such comments should stress that the liquidation of the investment portfolio and the advances to subsidiaries can no longer be considered a reliable source of funds.

Another method which may be used by a holding company to overcome a flow of funds deficiency is the sale of capital stock which is an effective source for generating permanent funds for the parent. However, it must be recognized that the primary reason for the stock offering was something other than covering the shortfall (i.e., debt repayment, capital contributions to subsidiaries, acquisitions). Therefore, it cannot be relied upon as a consistent annual source to supplement internally generated funds from operations. Also, it should be realized that the sale of stock will increase future funding requirements as additional dividends will have to be paid. Consequently, where no significant improvement in internal operations is contemplated in future periods, an appropriate comment is warranted indicating the potential problem.

Holding companies also compensate for inadequate funds flow with borrowed money. Although not a permanent source of funds, long-term debt is a source similar to the sale of stock. Its main purpose, however, was not to cover the shortfall. Long-term debt cannot be considered as a reliable, consistent annual source, and moreover, its existence creates new funding requirements.

Short-term debt is perhaps the most commonly used source to cover a deficit cash flow from operations and its use is of serious concern from a supervisory viewpoint. Unlike long-term debt and equity issues, short-term borrowings (i.e., bank loans, commercial paper) are readily available to holding companies which can and do rely on this source year after year for support. As a consequence, this indebtedness increases fixed charges and where material improvement in earnings does not develop, the shortfall could increase in subsequent periods thereby necessitating even larger borrowing requirements. This practice may jeopardize the parent's liquidity position since short-term liabilities rise without a corresponding increase in liquid assets as the borrowed funds are used to pay expenses. Here, an appropriate comment is warranted indicating the problems.

4010.0.6 REPORTING THE RESULTS

If the coverage ratios are less than 1:1, then appropriate comments are necessary to explain the external source utilized to make up the shortfall. The supporting details may be shown within the comments section of the Cash Flow Statement. More significant comments should be included on the ''Analysis of Financial Factors'' page or the ''Examiner's Comments'' page. The examiner may include prior years' results for comparative purposes.

4010.0.7 INSPECTION OBJECTIVES

1. To determine the ability of the parent to manage its cash position and operate within debt service and funding requirements.
2. To measure the parent's ability to meet its fixed obligations and its dependency on borrowed funds to meet its cash needs.
3. To determine if the parent company's dividends to stockholders are covered by residual cash earnings.
4. To analyze any cash flow transaction which may adversely affect the financial stability of the parent.
5. To discuss with parent company management:

   a. Deficit cash flows arising from internal operations;

   b. Steps management has taken, or plans to take, to restore adequate cash earnings coverage for fixed charges and dividend payments and whether such plans should be commensurate with the maintenance of adequate loan loss reserves and Tier 1 capital levels in the bank and major nonbank subsidiaries.

   c. Any parent company borrowings or restructurings needed to sustain dividend payments to shareholders; and

   d. The need to increase cash flow although there may be no deficit in current cash flow coverage.

4010.0.8 INSPECTION PROCEDURES

1. Prepare the ''Cash Flow Statement (Parent)'' FR 1225.

   a. Analyze each item of the parent company's comparative balance sheet and income statement. Since accrual figures may be used for all accounts except tax and dividend payments, adjustment to the figures may be necessary for the difference between accrual and cash basis accounting.

   b. Examine the underlying nature of period increases or decreases for the balances listed on the financial statements, particularly any material transactions that aided in averting coverage ratio shortfalls.

   c. Note contractual long-term debt retired (net decrease in borrowed funds, including sinking fund provisions) as a memo item on the bottom of the page, where indicated.

   d. Compute the fixed charge and common stock cash dividend coverage ratios as illustrated on the page. *The numbered items in the formula correspond with the numbered items on the ''Cash Flow Statement (Parent)'' page.*

   e. Answer the six questions on the ''Cash Flow Statement (Parent)'' page that prompt an analysis.
2. Analyze the Results.

   a. If there is full coverage, no problem should be assumed. However, *the underlying assets and transactions that provided for the coverage should be examined to make certain that ''no problem'' does, in fact, exist.*

   b. If a shortfall exists, provide guidelines to the parent company's management for developing a workable contingency plan, using your ''good examiner judgement'', considering the viability of all sources in resolving the shortfall.

   - Review the *sources* for making up shortfalls:
     - — Liquidation or sale of assets, *giving full consideration to external market concerns and losses that may result from the sales.*
     - — Proceeds from stock offerings.
     - — Increase in borrowed funds, including a restructuring of short term debt to long term debt.
     - — Sale of capital stock.
     - — Payments from subsidiaries on advances in the form of amortization or interest.
     - — Short term debt.
3. Report the Results.

   a. *When an ''engineered'' (planned) shortfall exists,* indicate that one does exist, the reasons therefore, and the degree of severity to which it should be addressed, either as part of the answers to the questions on the ''Cash Flow Statement (Parent)'', the ''Analysis of Financial Factors'' page, or the ''Examiner's Comments'' page. Provide management's assessment as to whether planned short falls will occur in the future.

b. When an *unplanned shortfall exists,* determine the extent of criticism that is to be made when short falls are lessened or corrected by an imprudent use of *alternative sources.* Based on the severity of the situation, determine whether the comments will be provided in the inspection report as answers to the questions on the Cash Flow Statement, or within the content of the ''Analysis of Financial Factors'' page, or the ''Examiner's Comments'' page.

BHC financial leverage is the use of debt to supplement the equity in a company's capital structure. It is anticipated that funds generated through borrowings will be invested and earn a rate of return above their cost so that the net interest margin generated will improve the company's net income, providing a higher rate of return on stockholders' equity which has otherwise remained constant. Since no creditor or lender would be willing to extend credit without the cushion and safety provided by the stockholders' equity, this borrowing process is also referred to as "trading on equity." That is, utilizing the existence of a given amount of equity capital as a borrowing base. Stockholders and management often view leveraging as a favorable financial alternative because if owners have provided only a small portion of total financing, much of the financial risk will be borne by the lenders, alleviating the need of the stockholders to assume the total risk. In addition, by raising funds through long-term debt, the owners gain the benefits of maintaining control of the firm with a limited investment rather than diluting existing ownership via the sale of additional capital stock.

There are, however, some unfavorable aspects in this type of financing. As a holding company substitutes debt for equity, keeping its asset size constant, its leverage ratio will increase. The increase in leverage increases the probability that a company may go into default since a larger portion of the income stream generated by earning assets must then be used to meet increased fixed charges (interest expense). (This assumes that increases in future earnings are not anticipated. While earnings may be sufficient to meet fixed interest expenses at the time the debt is issued, it is possible that future earnings will not be sufficient to meet the increased expenses.) In addition, utilization of leverage reduces management flexibility in making future decisions because lenders impose restrictive covenants that may limit future debt issues, limit dividend payments, or impose constraints on specific operating ratios. However, not all of the effects of increased leverage are unfavorable. Additional long-term debt may have the favorable effect of extending maturities on obligations and may improve liquidity.

Leverage ratios measure the contribution of owners compared with the financing provided by lenders. Companies with low leverage ratios generally have less exposure to loss when the economy is in a recession, but they may also have lower expected returns when the economy booms. Firms with high leverage ratios run the risk of large losses but also have a chance of earning high rates of return on equity and assets. Thus, if a company earns more on the borrowed funds than it pays in interest, the return to the owners is increased. For example, if the company earns 10 percent on assets and debt costs 8 percent, there is a 2 percent differential accruing to the stockholders. However, if the return on assets falls to 7 percent, the differential between that figure and the cost of debt must be made up from total profits.

A bank holding company is composed of at least two tiers, parent and subsidiary, and each tier may issue long-term debt in its own name. Several different types of long-term debt instruments are utilized by holding companies. Corporations make use of instruments such as debentures, convertible debentures, term loans, capital notes and mortgage notes. (See Manual section 2080.0—"Funding"). While most issues are generally sold to the public, in some cases, issues of subsidiaries have been placed directly with another subsidiary, the parent company, or perhaps with an unaffiliated banking institution. Alternatively, issues presently held on the books of the parent may have been originally issued by one of the subsidiaries and later transferred to the parent. These transfers have often occurred at the time of the formation of the holding company when debt of the subsidiaries was assumed by the parent.

The proceeds of parent company long-term debt may be advanced to banking subsidiaries as debt or invested in banking subsidiaries as equity. When parent debt is issued, and the proceeds are advanced to subsidiaries as debt, a condition of "***simple leverage***" exists. When such proceeds are invested in subsidiaries as equity, a condition of "***double leverage***" is said to exist since the increase in the subsidiary bank's capital base will allow the bank to increase its own borrowings.[1] In effect, the

1. Parent company "***total leverage***" may be defined as the relationship between equity at the parent level and the total assets of the parent company. Such assets typically consist of investments in bank and nonbank subsidiaries, advances to affiliates, deposits with bank affiliates and securities. A useful related measure of parent company leverage is "***investment leverage***" which may be defined as the relationship between parent equity and its equity investments in subsidiaries. Since the equity which has been invested in subsidiaries can, and often is, further leveraged by external borrowings of such subsidiaries, this type of parent company investment leverage can lead to what is referred to as "***double leverage***."

parent's capital injection which was funded by debt, provides the bank with greater debt capacity, thereby allowing the bank to borrow additional funds on its own. Therefore, the original borrowing by the parent has, in effect, been compounded when the bank borrows based on its newly injected equity.

If the parent debt is reinvested as equity in a bank, the servicing of interest and principal is usually provided by dividends paid to the parent by the bank subsidiaries. The bank dividends, however, may become restricted based on the bank's earning power which may not provide for sufficient retention of earnings to support its asset growth. Problems may be less severe when parent debt is downstreamed as debt to the bank subsidiary. When the terms and maturities of the indentures match, the obligation of a bank to meet its interest and principal payments to the parent are contractual and represent fixed charges (interest is tax deductible) which will continue up to the maturity of the note. When funds are downstreamed as equity and the bank typically issues dividends to its parent, it is easier to restrict the flow of funds from the bank than if the funds were downstreamed as debt which results in bank payments of interest expense. Bank dividend declarations are subject to limitations imposed by sections 5199(b) (12 U.S.C. 60) and 5204 (12 U.S.C. 56) of the United States Revised Statutes, while interest payments are not subject to such restrictions.

4010.1.1 ACQUISITION DEBT

Some holding companies use debt for the acquisition of subsidiary banks. The Board believes that a high level of acquisition debt can impair the holding company's ability to act as a source of strength to its bank subsidiaries, and thus does not favor the use of a substantial amount of acquisition debt in bank holding company formations. However, the Board recognizes that the use of acquisition debt in the formation of certain holding companies may be necessary, particularly when transferring the ownership of small community banks (approximately $150 million or less), and the maintenance of local ownership in those banks. To this end, and in the interest of maintaining a safe and sound banking system, the Board has adopted a policy for assessing financial factors in the formation of small one-bank holding companies. (see Manual section 2090.2)

4010.1.2 INSPECTION CONSIDERATIONS

Generally, it is not the examiner's responsibility to criticize the method of term financing used by a bank holding company. The examiner, however, should be familiar with the various types of leveraging and the possible ramifications that they may have on a holding company structure. While the use of ratios may show an excessive leverage position, indicating vulnerability, it is primarily the corporation's earning power that dictates the acceptable level of debt. Accordingly, the examiner should compute a holding company's ability to meet its fixed charges (as detailed in the preceding section) to determine the appropriateness of the leverage position. If the company's earnings do not support the present fixed charge requirements, or if a declining trend is noted, appropriate comments are warranted.

4010.2.1 INTRODUCTION

Liquidity is generally defined as the ability of a company to meet its short-term obligations, to convert assets into cash or to obtain cash, or to roll-over or issue new short-term debt. Short-term is generally viewed as a time span up to a year. Since a bank holding company does not have the full range of asset and liability management options available to it that a bank does in managing its liquidity position, it therefore, needs to have a sufficient cushion of liquid assets to support maturing liabilities. Certain assets which normally would not be considered current may be readily sold to avert a liquidity squeeze. For example, a holding company may be participating in long-term loans originated by a Small Business Investment Company (S.B.I.C.) subsidiary. If these loans are of good quality, the parent's share may be sold at little or no discount to that S.B.I.C. subsidiary, another subsidiary, or an unaffiliated company to obtain the needed cash. Consequently, the breakdown of assets segregating those that are current would not necessarily be indicative of liquid assets, given the nature of bank holding company investments. Therefore, liquid assets are defined as those assets which are readily available as cash or which can be converted into cash on an ''arm's-length'' basis without considerable loss.

Liquidity problems are usually a matter of degree of severity. A less serious liquidity problem may mean that the company is unable to take advantage of profitable business opportunities. A more serious lack of liquidity may mean that a company is unable to pay its short-term obligations and is in default. This can lead to the forced sale of long-term investments and assets and, in its most severe form, to insolvency and bankruptcy.

4010.2.2 SUPERVISORY APPROACH TO ANALYZING PARENT COMPANY LIQUIDITY

For bank holding companies with consolidated assets in excess of $1 billion or material amounts of debt outstanding, or others, at the option of the Reserve Bank, the analytical approach to parent company liquidity will include the following key elements:

1. Beginning an evaluation of parent liquidity with an analysis of the *contractual* maturity structure of assets and liabilities, extended to consider the underlying liquidity of its intercompany advances and deposits. Any judgment of *adequate* parent company liquidity must be keyed to a finding that the parent has adequate liquid assets, on an underlying basis, to meet its short-term debt obligations.
2. Estimating the underlying liquidity of parent liabilities and assets, giving particular attention to interest bearing deposits in and advances to subsidiaries. Emphasis should be placed on asset quality and the liquidity profile of the bank and key nonbank subsidiaries. The estimates are to be reflected in a statement of ''Parent Company Liquidity Position'' as restated data with appropriate explanations as to the basis for the restatement.
3. Using the statement of ''Parent Company Liquidity Position'' which includes five contractual and estimated underlying maturity categories into which data is to be slotted. They are:
   a. Up to 30 days;
   b. Up to 90 days;
   c. Up to 1 year;
   d. One to two years; and
   e. Beyond two years.

   The schedule provides for the use of effective remaining maturity categories for the parent company's short-term assets and liabilities, highlighting funding surpluses or deficits at key specified periods of times. *Examiners have the option of including the statement in the inspection report to substantiate or clarify particular judgments.*
4. Using the conclusions drawn from the statement of parent company liquidity position as a basis for discussions with management. Examiners will also comment on their findings in detail on the ''Analysis of Financial Factors'' page in the inspection report.
5. Ascertaining that an organization with significant funding activities has in place:
   a. Internal parent liquidity management policies which address and limit the use of short-term funding sources to support various subsidiaries; and
   b. An internal *Contingency Plan* for maintaining parent liquidity under adverse situations.

4010.2.3 STATEMENT OF PARENT COMPANY LIQUIDITY POSITION

The purpose of the statement of ''Parent Company Liquidity Position'' is to provide a consistent method for analyzing parent liquidity. The schedule is *not* intended to address the issue of interest sensitivity. While only conclusions drawn from the schedule of estimated, effective maturities are to appear in the inspection report, examiners should also collect data on contractual (remaining life) maturities of parent assets and liabilities. Examiners will treat all externally funded nonbank entities of the parent company in a similar fashion.

The maturity categories appearing on the schedule represent a basic analytical framework for looking at funding mismatches and are not necessarily appropriate for all organizations. As such, categories can be adjusted to fit particular circumstances. On a conceptual basis, the 30 day period corresponds to a period during which markets might be in temporary disarray due to an external shock. For the largest companies with substantial overnight and very short term funding operations, an additional one-to-seven-day category may be needed. The 31 to 90 day period allows for gauging the parent's ability to withstand internal adversity and demonstrate a return to ''normal'' business operations. The 91 to one year period is a reasonable planning horizon over which an organization might be able to readjust its internal funding policies substantially. In addition, the up to one year categories, as a group, complement the cash flow analysis of debt servicing capacity by specifically addressing maturing debt that must be either paid or rolled over at prevailing rates. The one to two year category provides an early indication of any funding imbalances that would have to be addressed by management in the reasonably near term. As a practical matter, the over two year category has limited analytical value in most cases and is included principally to make certain that all deposits and advances are accounted for.

Using these categories, funding surpluses or deficits can be identified for specific maturity intervals. Guidelines on acceptable practices for funding surpluses and shortfalls are set for the examiners in evaluating gaps based on estimated ''underlying'' maturities. Examiners would be expected to place particular emphasis on the up to 30 day period, where a net liquidity surplus would be expected to provide at least that much time for a parent to ride out a shock. Similarly, the up to 90 day period would be viewed as the relevant time to demonstrate to the market that problems are being addressed appropriately and are being brought under control. Imbalances in the 91 day to one year categories would generally have less significance, due to greater uncertainty regarding the assumptions that would go into any adjustments.

A logical point for assessing parent liquidity is an assessment of the contractual maturity structure of the holding company's balance sheet. Contractual maturities of assets and normal run-off of liabilities are to be slotted into the five maturity categories depicted. Once completed, the examiner is provided with an initial indication of whether the parent has an adequate cushion of short-term liquid assets within the 0 to 30 day and the 0 to 90 day categories to cover short-term liabilities or whether a pattern of significant short-term funding gaps exists. Certainly, the identification of such gaps gives guidance on obvious areas for further analysis. However, the absence of short-term funding shortfalls on a strictly contractual basis gives only limited comfort as the parent's underlying liquidity still must be analyzed more deeply.

4010.2.4 ANALYSIS OF UNDERLYING SOURCES TO FUND DEBT AND TO MEET OTHER OBLIGATIONS

Adjustments to the schedule that better reflect the parent's liquidity position will be made as the next step in the analysis. These adjustments require the examiner's judgment on the underlying liquidity of the parent's assets and liabilities with particular emphasis placed on interest bearing deposits with bank subsidiaries and advances to both bank and nonbank subsidiaries.

4010.2.4.1 Interest Bearing Deposits With Subsidiary Banks

The parent's interest bearing deposits[1] with the subsidiary bank(s) may represent either the temporary placement of idle funds or a more permanent source of bank funding. Temporary deposits typically are structured to mature in 90 days or less, are generally not substantial in relation to the overall size of the bank, are usually supported by substantial holdings of highly liquid bank assets, and could be repaid without triggering marketplace concerns regarding the organization's overall funding needs. Therefore, if this pattern exists, the temporary deposits may

1. In concept, the parent could also have advances to bank subsidiaries. Such advances are either booked as deposits (typically off-shore time deposits to avoid reserve requirements) or as instruments qualifying as Tier 1 or Tier 2 capital. To the extent that advances to banks are encountered, the analysis follows the same approach as with deposits.

be considered highly liquid and slotted in the 0 to 30 day (or 0 to 7 day) period on the schedule, regardless of their contractual maturity dates.

Interest bearing deposits with the subsidiary bank(s) that serve as a permanent source of bank funds are typically substantial in relation to the size of the bank and are usually placed to fund bank expansion without additional bank borrowings. Here, judgments regarding underlying liquidity should be keyed to the CAMELS ratings on the bank's liquidity and asset quality as well as reasoned judgments on the bank's ability to liquidate assets and/or replace the funds in the marketplace through additional borrowings. Asset quality is regarded as critical as it is a leading indicator of bad news that will ultimately pull down earnings and undermine market confidence. As a general principle, the liquidity of the parent's deposits in bank(s) should be no better than the liquidity of the bank(s), and subject to downgrading if bank asset quality is suspect. If bank asset quality is worse than fair, the liquidity of these funds should be downgraded. For banks with asset quality rated fair, the parent's deposits might still be considered liquid, but a closer analysis of the particular situation would be warranted.

Under the assumption that the bank's asset quality and liquidity positions do not negatively impact the bank's ability to liquidate or replace these funds, such deposits may be slotted in the 0 to 30 day (or 0 to 7 day for large institutions) period on the schedule regardless of the contractual maturity. However, if these deposits are substantial, their replacement may trigger market concerns. At this point, the examiner's judgment is necessary regarding an acceptable level at which a portion of the deposits could be replaced in the marketplace without triggering such concerns. A starting point for the examiner should be to evaluate the funding gaps appearing on the contractual maturity schedule with particular attention paid to the 0 to 90 day period (0 to 30 days for large institutions). While it may be impossible for the bank(s) to replace all the parent's deposits without triggering concerns, the bank(s) may be able to replace only the portion necessary to eliminate the negative cumulative funding gap in the given time period. If even this amount is deemed to be substantial, the examiner may have no other alternative but to treat the deposits in accordance with the contractual maturity. For clarification purposes, the following example is provided:

The contractual maturity schedule of a large holding company reflects a negative cumulative gap of $400 million in the 0 to 30 day time frame. The company's balance sheet includes $2.5 billion in interest bearing deposits at the subsidiary bank(s), with $1 billion maturing in 30 days and $1.5 billion in 31 to 90 days.

In the examiner's judgment, the entire $1.5 billion due in over 30 days qualify to be slotted in the under 30 day category,[2] but the bank would face liquidity pressures to replace this amount prior to its original maturity. However, $400 million, the amount needed to eliminate the negative cumulative gap position, could be replaced by the bank without undue market concern. Therefore, $400 million from the 31 to 90 day period should be reslotted in the appropriate under 30 day period.

4010.2.5 ADVANCES TO SUBSIDIARIES

Given the typical composition of bank holding company assets, the examiner is likely to encounter difficulty in determining the degree of liquidity inherent in advances to subsidiaries.

For those subsidiaries with satisfactory asset quality, the examiner can usually assume the subsidiary could sell qualifying assets to affiliate bank(s) up to the quantitative limitations of section 23A, as long as the affiliated bank(s) are judged to have adequate liquidity. The examiner can also assume that the subsidiary, with an established program of secondary market asset sales, could at least continue or even modestly expand the scope of the program. For subsidiaries without a program of asset sales, but whose assets are of the type that are readily marketable in the secondary market, a *limited* asset sale program could be considered to provide some asset liquidity. However, caution should be used in estimating the magnitude of such sales, particularly because large transactions could not be accomplished quickly without risking market visibility and broadcasting concerns regarding the corporation's funding.

When nonbank advances are substantial, the parent has little or no practical access to the funds advanced. While an arm's-length sale of such a subsidiary or a large portion of its assets to a bank affiliate may not generate a loss, the funding requirements for a large transaction at the bank level would probably initiate market-

2. Subject to early withdrawal penalties which will be eliminated in consolidation.

place concerns.[3] Similarly, significantly above normal asset sales to an unaffiliated party would not only trigger market concerns, but would probably also result in a significant discount. Furthermore, although it is possible that another nonbank subsidiary may act as the funding vehicle, the subsidiary's ability to generate the required funds may be restricted at best. Such restrictions may include marketplace concerns as well as limitations on the maximum leverage positions or creation of senior debt imbedded in debt covenants.

Advances to a subsidiary may be either short-term or long-term and are made for a variety of reasons, including providing a temporary source of income for the parent, enhancing a subsidiary's liquidity position, and supporting a subsidiary's operations. Therefore, the purpose of the loan, its maturity, as well as the degree to which high quality assets of a subsidiary cover the amount due to the parent, should also be considered in order to properly categorize advances.

4010.2.6. LIQUIDITY AND LIABILITIES OF THE PARENT

In regard to liabilities of the parent, the policy presumption should be that their contractual maturity reflects the underlying availability of funds. Exceptions will reflect special circumstances, such as funding from foreign ownership interests or partners in joint ventures who have equity interests and an ongoing business relationship. The presence of back-up lines of credit for commercial paper, while especially desirable in the case of regional companies, should not, by itself, cause an examiner to assume that the underlying maturity of a parent's short-term debt is materially longer than its contractual term, or that these lines will always be readily available. In fact, organizations experiencing considerable problems, particularly asset quality and liquidity, have found that these facilities are no longer available.

The examiner should thus review back-up lines on a case-by-case basis and be aware of any escape clauses in interbank agreements. Specifically, for companies with a composite "3" or worse BOPEC rating *or* lead banks with asset quality of a declining "3" or worse *or* where asset quality *and* liquidity are rated "3" or worse, it is recommended that back-up lines with "material adverse change" or similar escape clauses *not* be regarded as satisfactory support to an imbalanced parent company funding position.

Furthermore, certain holding companies' liabilities may often include unamortizing debt instruments. The company's ability to retire or replace such issues at maturity should be evaluated as part or the organization's overall liquidity analysis. If it is the intention of management to roll over the maturing issues, the evaluation should be based on the company's ability to do so. In cases where debt retirement is the route chosen by management, the examiner's evaluation and judgment should focus on the company's ability to generate the necessary funds either through asset liquidation or the issuance of equity instruments.

The unamortizing portion of debt issues is to be slotted in the appropriate maturity column of long-term debt. If the maturity of such issues falls due within the 0 to 90 day time frame, the examiner should comment on the organization's ability to replace the maturing issues or retire them by the deployment of funds from other sources in a footnote on the schedule. If the maturity of such debt is longer, the replacement or retirement should be addressed in the corporation's funding plan.

4010.2.7 ANALYZING FUNDING MISMATCHES

After adjustments for the underlying liquidity of the parent's interest bearing deposits and advances to subsidiaries and the underlying maturity of its liabilities, the resulting schedule should provide the examiner with the framework for looking at funding mismatches as a tool for assessing the parent's overall liquidity position. The position may be evaluated by the analysis of the underlying liquidity gaps (appearing on the bottom of the schedule). In the 0 to 30 day time frame, a net positive gap is expected and reflects the parent's ability to ride out a temporary market disarray. Although a negative gap in the 8 to 30 day period may be evident in larger organizations, the overall 30 day interval is expected to be positive. Similarly, for most organizations, the 0 to 90 day period is expected to reflect a positive position, regardless of a shortfall in the 31 to 90 day period. Failure to meet these conditions requires appropriate examiner comments on the "Examiner's Comments" page of the report.

The 91 day to 1 year time frame (as well as

3. Underlying liquidity estimates should follow the same approach previously stated for deposits.

the 31 to 90 day period for certain larger organizations) is less critical, and negative cumulative funding positions of modest size may be tolerated if the organization has demonstrated an ability to tap the funding markets, has readily available backup lines of credit, has a reasonable earnings retention policy, adequate funds flow coverage and other fund generating programs such as a dividend reinvestment plan. Judgments on the reasonableness of any imbalances in these longer term categories should be weighed against the examiners' estimates as to the adequacy of these sources. In addition, the examiner should view these longer periods as a reasonable planning horizon over which the organization should be able to readjust its funding policies as well as provide an early indication of how funding imbalances, that may develop, are to be addressed by management.

A significant shortfall in the 91 day to 1 year period is expected to be covered by a contingency funding plan. While no single formula for such plans is recommended or possible, each organization needs to address its own particular situation and the options it faces. At minimum, the organization needs to address possible market shocks whether caused by its own actions or by external events. Funding markets should be addressed individually and as a group both as to their likely resiliency and the particular organization's position within each market. Contingency sources should be tested periodically as to their viability. The examiner should review the reasonableness of assumptions and adequacy of alternative courses as part of the company's liquidity analysis. Where no plan exists, a plan acceptable to the corporation's directors should be required. Even if there are no specific concerns, the existence or lack of a plan should be taken into account when assessing management.

In analyzing liquidity, the examiner will encounter the least difficulty when liquid assets equal or exceed short-term liabilities. In those instances, the liquidity position is considered adequate. If the examiner notes a declining trend in the liquidity position, an appropriate comment may be warranted, even though sufficient liquidity exists at that time.

Conversely, the examiner will encounter the most difficulty in analyzing liquidity when liquid assets are not sufficient to cover short-term obligations. When this situation exists, it is not necessarily indicative of an inadequate liquidity position. At that point, the examiner must consider other readily available sources of cash not shown on the balance sheet (e.g., unused bank lines, dividends from subsidiaries).

Footnotes to financial statements may also play an important role in such an analysis. One such footnote may be indenture restrictions on long-term debt. While a company may temporarily alleviate a liquidity bind by paying off its commercial paper with short-term bank loans, it may be faced with the problem of paying off the bank debt if it is precluded from issuing additional long-term debt.

4010.2.8 REPORTING THE RESULTS OF THE ANALYSIS

In the normal course of the inspection, the examiner should present his conclusions concerning liquidity to management. Where there is an indication of some vulnerability, the examiner should solicit management's opinion and any corrective action plans being considered. If it appears that management has not addressed itself to the vulnerable or inadequate situation, an appropriate comment should be made. The results of this analysis should be discussed in the parent company section on the ''Analysis of Financial Factors'' page in the inspection report. In addition, the examiner has the option of incorporating the liquidity schedule in the report to substantiate or clarify particular judgments. Criticism with respect to a liquidity shortfall anywhere within the 0 to 90 day time frame or, in most cases, the absence of a Contingency Plan to cover shortfalls in the under 1 year time frame, should be carried forward to the ''Examiner's Comments'' page, the transmittal letter, and be included in discussions with management.

4010.2.9 INSPECTION OBJECTIVES

1. To analyze the contractual maturity structure of assets and liabilities, and then extend the analysis to the underlying liquidity of intercompany advances and deposits, considering whether the underlying liquidity is short-term or long-term in nature.

2. *To estimate the underlying liquidity of parent liabilities and assets,* with particular attention to interest bearing deposits in, and advances to, subsidiaries. Place emphasis on:

a. Asset quality; and

b. The liquidity profile of the bank and key nonbank subsidiaries.

3. To restate the estimates on the analysis of

''Parent Company Liquidity Position'' using the suggested *5 broad contractual and underlying maturity categories.*

4. *To judge the adequacy of parent company liquidity,* keying it to a finding as to whether the parent has adequate liquid assets, on an underlying liquidity basis, to meet its short term debt obligations.

5. For *BHC's that have significant funding activities* at the parent level, to determine if the parent company has in place:

a. *Internal parent liquidity management policies* which address and limit the use of short term funding sources to support subsidiaries.

b. An internal *Contingency Plan* for maintaining parent liquidity in the face of adversity.

6. To draw conclusions from the estimated remaining effective maturities that appear in the report.

4010.2.10 INSPECTION PROCEDURES

1. Assess the contractual maturities of the parent company's balance sheet.

2. Slot the contractual maturities of assets and normal runoff of liabilities into the five categories on the ''Parent Company Liquidity Position'' page.

3. On the schedule, make adjustments, as to the underlying maturity of the parent company's assets and liabilities.

4. Review funding mismatches.

5. *Review the reasonableness of the Contingency Plan's assumptions and adequacy of alternative sources*.

a. If no plan exists, a plan acceptable to the corporation's directors should be required.

b. Even if there are no specific concerns, the existence or lack of a plan should be taken into account when assessing management.

6. Discuss the results in the parent company section of the ''*Analysis of Financial Factors*'' page in the inspection report.

7. Include in the ''*Examiner's Comments*,'' page 1, *criticism of liquidity shortfalls within the 0 to 90 day period or the absence of a contingency plan to cover shortfalls in the under one year time frame*, that were discussed with management.

In making the determination as to the condition of the holding company under inspection, an examiner must, as part of his examining procedure, focus his efforts on analyzing the financial condition of the bank(s) owned by the holding company. Such an appraisal is obviously of paramount importance when one considers that the bulk of the consolidated assets and earnings of a holding company are represented by the bank(s). The examiner must incorporate in the analysis, results of the most recent commercial examination of the subsidiary bank(s).

Therefore, for meaningful results, the analysis of the subsidiary bank(s) should commence after the results of the latest examination of the bank(s) have been obtained. The examiner in his analysis of the bank must consider and determine whether certain key facets of a bank's operations meet minimum standards and conform, where required, to bank regulatory restrictions. Areas of principal concern are: capital adequacy, asset quality, earnings, liquidity, and quality of management. The examiner should be especially alert to any exceptions or violations of applicable statutes or regulations that could have a materially adverse effect upon the financial condition of the organization. In addition, the examiner should also consider the conclusions drawn as to the extent of compliance and the adequacy of internal bank policies that contribute to the overall analysis of the bank's condition.

Inspection personnel should use the examination ratings of the other federal agencies (where appropriate) when completing the inspection report. However, if substantive differences of opinion exist as to the bank's composite rating, adjustments to the rating may be made and footnoted to indicate the change.

One area of vital importance in the evaluation of a bank's condition is capital adequacy. Consideration should be given by the examiner whether the bank has sufficient capital to provide an adequate base for growth and a cushion to absorb possible losses, thereby providing protection to depositors. In that regard, the Board, has adopted capital adequacy guidelines, that include risk-based and leverage measures which apply to state member banks. The examiner should refer to section 303.1 of the *Commercial Bank Examination Manual* for guidance on evaluating the capital adequacy of state member banks.

The quality of a bank's assets is another area of major supervisory concern. Indeed, supervisors consider the appraisal and evaluation of a bank's assets to be one of the most important examination procedures. It will be established by the bank examiner during the examination of a subsidiary bank to what degree its funds have been invested in assets of good quality that afford reasonable assurance of ultimate collectibility and regularity of income. The examiner should have further determined that a subsidiary bank's asset composition is compatible with the nature of the business conducted by the bank, the type of customer served, and the locality. The holding company examiner is expected to comment upon the total classifications determined by the bank examiner in relation to the bank's capital. Consideration should also be given to the severity of the classifications. If the classified assets are considered not to possess a significant loss potential, favorable consideration should be accorded this factor.

Past due ratios should also be evaluated. In this respect, it is essential that trends be observed. Although a particular lending department's delinquent outstandings or an institution's overall past due percentage is presently considered reasonable, a noticeable upward trend may be worthy of comment to management. Excessive arrearages in any area warrant an examiner's comment in the inspection report. It behooves management to take appropriate action to improve any undesirable past due levels.

In determining an organization's asset quality, one effective yardstick employed by examiners is the ''weighted average'' of classifications, which takes into consideration the severity of a bank's classified assets. In rating asset quality, the ''weighted average'' of classifications system is designed to distinguish the degree of risk inherent in classified assets by ascribing weights to each category of classification thereby providing a more reliable measure of the impact of risk on bank capital.

The following weights are to be used:

Classification	*Weights*
Substandard	20%
Doubtful	50%
Loss	100%

The ratio of weighted classifications to Tier 1 capital is the primary criterion to be used in determining the quality of assets. However, examiners should also evaluate the adequacy of loan loss valuation reserves as compared to weighted classifications. Loss potential inherent in weighted classified assets must be offset by valuation reserves and equity capital or appropriate comments should be made.

Another tool that should be considered in evaluating asset quality is the bank's internal classification list, if the bank's lending procedures and management are adequate. Additional information on rating a bank's asset quality is available in the Uniform Interagency Bank Rating System.

Comparison of earnings trends with other banks of similar size, along with an analysis of the quality of those earnings, is probably the best initial approach in determining whether or not a bank's earnings are satisfactory. Comprehensive surveys of bank earnings by peer group size are tabulated by the Board and many of the Reserve Banks. The results are sufficiently detailed to permit various methods of comparison of the earnings of a specific bank with those in its peer group.

One ratio used as a means of measuring the quality of a bank's earnings is its return on average assets (net income after taxes divided by average total assets). If the ratio is low or declining rapidly, it could signal, among other things, that the bank's net interest income or margin is declining or that the bank is experiencing increased loan losses.

A bank's current earnings should be sufficient to allow for ample provisions to offset anticipated normal losses. Various factors to be considered in the determination of such losses include a bank's historic loss experience, the adequacy of the valuation reserve, the quality and strength of its existing loans and investments and the soundness of the loan and administrative policies of management.

In assessing a bank's earnings performance capabilities and the quality of those earnings, an examiner should give consideration to any special factors that may affect a particular bank's earnings. For example, a bank located in an urban area of a large city may find it difficult to earn as much as a bank of similar size located in a rural community or a small city. The urban bank is usually subjected to a higher level of operating expenses, particularly in salaries and local taxes. Moreover, its proximity to the large city and the competition afforded by bigger banks may necessitate lower rates of interest on loans as well as higher rates of interest on time deposits. Consideration should also be given to the adequacy of the loan loss provisions as referred to above, the inclusion of any capitalized accrued interest into interest income, or the nature of any large nonoperating gains when analyzing earnings. Further consideration should be given to the general nature of a bank's business or management's mode of operation. A bank's deposit structure and its resulting average interest paid per dollar of deposits may differ widely from that of other banks of a similar size and consequently, its earnings may be substantially below average as a direct result of the difference. For example, the maintenance of a high volume of interest bearing time accounts in relation to total deposits is a major expense and is quite often the cause for certain banks falling below the average earnings of comparably sized banks.

A bank's earnings should also be adequate in relation to its current dividend rate. The percentage that should be retained in the capital accounts is not clearly established. One thing is certain, the need for retained earnings to augment capital will depend on the adequacy of the existing capital structure as well as the bank's asset growth rate. Dividend payout rates may be regarded as exceeding prudent banking practices if capital growth does not keep pace with asset growth. Prudent management dictates that a curtailment of the dividend rate be considered if capital inadequacy is obvious and greater earnings retention is required. Apparently excessive dividend payouts or a record of recent operating losses should lead the bank or BHC examiner to refer to sections 5199(b) and 5204 of the United States Revised Statutes and section 208.19 of Regulation H which restrict state member bank dividends.

Analysis of net interest margins is of growing importance. A comparison should be made of a bank's ability to generate interest income on earning assets relative to the interest expenses associated with the funds used to finance the earning assets.

Additional information on rating bank earnings is available in the Uniform Interagency Bank Rating System.

Liquidity is generally defined as the ability to meet short-term obligations, to convert assets into cash or obtain cash, or to roll over or issue new short-term debt. Various techniques are employed to measure a bank's (depository institution) liquidity position. The bank examiner considers the bank's location and the nature of its operations. For example, a small rural bank has far different needs than a multibillion dollar money market institution.

In addition to cash assets, a bank will hold for liquidity purposes a portion of its investment portfolio of securities that are readily convertible into cash. Loan and investment maturities are generally matched to certain deposit or other liability maturities. However, the individual responsible for a bank's money management must be extremely flexible and have alternate means to meet unanticipated changes in liquidity needs. To offset these needs, other means of increasing liquidity may be needed, which might include increasing temporary short-term borrowings, selling longer-term assets, or a combination of both. Factors that the ''money management'' officer will consider include the availability of funds, the market value of the saleable assets, prevailing interest rates and the susceptibility to interest-rate risk, and the bank's earnings position and related tax considerations. Although most small banks do not have a ''money manager,'' they too must monitor their liquidity carefully.

One of the most common methods used by large banks to increase liquidity is to use additional borrowings. Some of the other basic means of improving liquidity include the use of direct short-term credit available through the discount window from Reserve Banks, the use of Federal funds purchases, and the use of loans from correspondent banks.

4020.4.1 SOUND LIQUIDITY-RISK MANAGEMENT

All banks are affected by changes in the economic climate, and the monitoring of economic and money market trends is crucial to liquidity planning. Sound financial management can minimize the negative effects of these trends while accentuating the positive ones. Sound liquidity-risk-management requires the following four elements:[1]

1. Well-established strategies, policies, and procedures for managing both the sources and uses of an institution's funds across various tenors or time frames. This includes assessing and planning for short-term, intermediate-term, and long-term liquidity needs.
2. Liquidity-risk measurement systems that are appropriate for the size and complexity of the institution. Depending on the institution, such measurement systems can range from simple gap-derived cash-flow measures to very sophisticated cash-flow simulation models.
3. Adequate internal controls and internal audit processes designed to ensure compliance with internal liquidity-management policies and procedures.
4. Comprehensive liquidity contingency plans that are well designed, span a broad range of potential liquidity events, and are tailored to an institution's specific business lines and liquidity-risk profile.

Information that a bank's management should consider in liquidity planning includes—

1. internal costs of funds,
2. maturity and repricing mismatches in the balance sheet,
3. anticipated funding needs, and
4. economic and market forecasts.

In addition, bank management must have an effective contingency plan that identifies minimum and maximum liquidity needs and weighs alternative courses of action designed to meet those needs. Some factors that may affect a bank's liquidity include—

1. a decline in earnings,
2. an increase in nonperforming assets,
3. deposit concentrations,
4. a downgrading by a rating agency,
5. expanded business opportunities,
6. acquisitions,
7. new tax initiatives, and
8. the need to maintain a plan that ensures adequate access to a diversified array of readily accessible confirmed funding sources,

1. See the July 23, 2003, Interagency Advisory on the Use of the Federal Reserve's Primary Credit Program in Effective Liquidity Management, issued by the federal financial institution regulatory agencies. The interagency advisory supplements and does not replace existing agency guidance or policy.

including liquid assets such as high-grade investment securities and a diversified mix of wholesale and retail borrowings.

Adequate liquidity contingency planning is critical to the ongoing maintenance of the safety and soundness of any depository institution. Contingency planning starts with an assessment of the possible liquidity events that an institution might encounter. The types of potential liquidity events considered should range from high-probability/low-impact events that can occur in day-to-day operations to low-probability/high-impact events that can arise through institution-specific or systemic market or operational circumstances. Responses to these events should be assessed in the context of their implications for an institution's short-term, intermediate-term, and long-term liquidity profile. A fundamental principle in designing contingency plans for each of these liquidity tenors is to ensure adequate diversification in the potential sources of funds that could be used to provide liquidity under a variety of circumstances. Such diversification should focus not only on the number of potential funds providers but also on the underlying stability, availability, and flexibility of funds sources in the context of the type of liquidity event these sources are expected to address.

4020.4.2 LIQUIDITY-RISK MANAGEMENT USING THE FEDERAL RESERVE'S PRIMARY CREDIT PROGRAM

The Federal Reserve's primary credit program (a type of discount window lending) offers generally sound depository institutions an additional source of available funds, although such funds are lent for managing short-term liquidity risks (at a rate above the target federal funds rate).[2] Management should fully assess the potential role that the Federal Reserve's primary credit program might play in managing the institution's liquidity. The primary credit program can be a viable source of very short-term backup funds. Management may find it appropriate to incorporate the availability of the primary credit program into their institution's diversified liquidity-management policies, procedures, and contingency plans. The primary credit program has the following attributes that make it a viable source of backup or contingency funding for short-term purposes:

1. Primary credit is extended, with minimal administrative burden, to eligible discount window participants.
2. Primary credit is available only to financially sound depository institutions, as determined by the lending Federal Reserve Bank.
3. Primary credit can enhance diversification in short-term funding contingency plans.
4. Borrowings can be secured with an array of collateral that is acceptable to the lending Federal Reserve Bank, including consumer and commercial loans.
5. Requests for primary credit advances can be made anytime during the day.[3]
6. There are generally no restrictions on the use of short-term primary credit.

If an institution incorporates primary credit into its contingency plans, the institution should ensure that it has in place with the appropriate Reserve Bank the necessary borrowing documentation and collateral arrangements. This is particularly important when the intended collateral consists of loans or other assets that may involve significant processing or lead time for pledging to the Reserve Bank.

It is a long-established sound practice for institutions to periodically test all sources of contingency funding. Accordingly, if an institution includes the Federal Reserve's primary and other credit programs, along with borrowing from other lenders, in its contingency plans, management should occasionally test the institution's ability to borrow from all the funding sources covered by the plan. The goal of such testing is to ensure that there are no unexpected impediments or complications in the case that such contingency lines need to be used.

Institutions should ensure that any planned use of primary credit is consistent with the stated purposes and objectives of the program. Under the primary credit program, the Federal Reserve generally expects to extend funds on a very short-term basis, usually overnight. Therefore, as with any other type of short-term contingency funding, institutions should ensure that

2. The Federal Reserve's secondary credit program provides loans to qualifying depository institutions (for example, those depository institutions that are not eligible for the primary credit program) at an interest rate that is above the primary credit program's interest rate. See section 3010.1 of the *Commercial Bank Examination Manual* for a further discussion of the Federal Reserve's credit programs.

3. Advances generally are booked at the end of the business day.

any use of primary credit facilities for short-term liquidity contingencies is accompanied by viable take-out or exit strategies to replace this funding expeditiously with other sources of funding. Institutions should factor into their contingency plans an analysis of their eligibility for primary credit under various scenarios, recognizing that if their financial condition were to deteriorate, primary credit may not be available. Under those scenarios, secondary credit may be available.

Secondary credit is available at a rate above that of primary credit. Secondary credit is available to meet short-term needs (when the borrowing is constant and there is a prompt return to market funding sources) or to resolve financial difficulties. The preparations made by a bank to access primary credit (the documentation and collateral requirements) will also support the borrowing of secondary credit.

Another critical element of liquidity management is an appropriate assessment of the costs and benefits of various sources of potential liquidity. This assessment is particularly important in managing short-term and day-to-day sources and uses of funds. Given the above-market rates charged on primary credit, institutions should ensure that they adequately assess the higher costs of this form of credit relative to other available sources. Extended use of any type of relatively expensive source of funds can give rise to significant earnings implications which, in turn, may lead to supervisory concerns.

It is also important to note that the Federal Reserve's primary credit facility is only one of many tools institutions may use in managing their liquidity-risk profiles. An institution's management should ensure that the institution maintains adequate access to a diversified array of readily available and confirmed funding sources, including liquid assets such as high-grade investment securities and a diversified mix of wholesale and retail borrowings. (See SR-03-15.)

4020.4.2.1 Supervisory and Examiner Considerations

Because primary credit can serve as a viable source of backup, short-term funds, supervisors and examiners should view the occasional use of primary credit as appropriate and unexceptional. At the same time, however, supervisors and examiners should be cognizant of the implications that too-frequent use of this source of relatively expensive funds may have for the earnings, financial condition, and overall safety and soundness of the institution. Overreliance on primary credit borrowings, or any other single source of short-term contingency funds, regardless of the relative costs, may be symptomatic of deeper operational or financial difficulties. Importantly, the use of primary credit, as with the use of any potential sources of contingency funding, is a management decision that must be made in the context of safe and sound banking practices.

4020.4.3 ANALYSIS OF LIQUIDITY

A bank's liquidity must be evaluated on the basis of the bank's capacity to satisfy promptly its financial obligations and its ability to fulfill the reasonable borrowing needs of the communities it serves. An examiner's assessment of a bank's liquidity management should not be restricted to its liquidity position on any particular date. Indeed, the examiner should also focus his efforts towards determining the bank's average liquidity over a specific time period. The examiner's evaluation should also encompass the overall effectiveness of the institution's asset-liability management and liquidity risk-management strategies. Factors such as the nature, volume, and anticipated takedown of a bank's credit commitments should also be considered in arriving at an overall rating for liquidity.

If the bank examiner has commented on a liquidity deficiency at a subsidiary bank, the holding company examiner should consider these findings in the overall analysis of financial factors. Additional information on rating a bank's liquidity is available in the Uniform Interagency Bank Rating System.

The condition of a bank provides important insight regarding the quality of bank management. An appraisal of management's performance should be measured in terms of long-term profitability, risk exposure, liquidity, and solvency; all geared toward assuring the bank's continued profitability and overall sound financial condition. Management must meet the bank's challenges and position in the market place among its competitors. It must make plans which will achieve the objectives established by the bank's directors. Management must be constantly alert to the need for continued upgrading and expanding of services and facilities to advance, support, and encourage the bank's growth.

Just as sound management decision making will generally produce banks that are free from serious problems, ineffective management has invariably been a prominent factor in almost every serious problem bank situation. An examiner must consider the degree and severity of problems that exist in the bank under examination and attempt to establish the responsibility for such. The examiner should seek to determine to what degree the bank's problems are attributable to questionable management judgment as opposed to outside factors, such as unfavorable economic conditions.

As indicated at the beginning of Part IV, the major portion of the holding company's consolidated assets are held in the bank subsidiaries. Furthermore, at the parent level, the major asset is generally the investment in subsidiaries, the principal portion of which is the investment in the bank(s). Therefore, with few exceptions, it is the overall condition of the bank subsidiaries that reflects the condition of the parent company. As the holding company examiner reviews the examination report(s) for each bank subsidiary, a decision must be made with respect to the general condition of each bank. When all the bank subsidiaries have been reviewed, the examiner must put these findings within their proper perspective. For example, if four of five bank subsidiaries comprise less than 10 percent of the combined banking assets, it is the condition of the fifth bank subsidiary that will weigh heavily in the analysis. In other words, if the fifth bank comprises 90 percent of the combined banking assets, the parent's investment in that bank also comprises most of the holding company's assets. Thus, the quality of the parent's assets would be reflected in the general condition of that bank and appropriate comments are warranted. It should be noted, however, that regardless of relative size, a bank experiencing problems should be commented upon in the summary analysis.

4020.9.1 DEFINITION AND SCOPE OF THE DE NOVO BANK SUPERVISION POLICY

The term ‘‘de novo bank’’ refers to a state member bank that has been in operation for five years or less. The application and supervision standards for de novo state member banks are found in SR-91-17. De novo state member bank subsidiaries of bank holding companies are subject to those policies. The standards discussed in this section are limited to a de novo subsidiary bank's financial performance.

The de novo policy also extends to commercial banks that have been in existence for less than five years and subsequently convert to membership. Because thrifts, Edge Act companies, and industrial banks that are converting to membership (‘‘converted banks’’) have not demonstrated operating stability as commercial banks, they also are subject to the de novo policy, regardless of how long they existed before the conversion.

The policy applies to de novo banks through the fifth year of operations. Experience has shown that pronounced problems often surface during a new bank's fourth and fifth years of operation, frequently as a result of inexperienced management, management and director changes, dissension among directors, directors' lack of involvement, and poor lending practices during the early years.

4020.9.2 CAPITAL STANDARDS FOR SUBSIDIARY BANKS OF BHCs

De novo subsidiary banks of bank holding companies are expected to maintain capital in conformance with the de novo policy guidelines of SR-91-17. Initial capital in a de novo state member bank should be reasonable in relation to state law, the bank's location and business plan, and the competitive environment. At a minimum, a de novo bank must maintain a tangible Tier 1 leverage ratio of 9 percent for the first three years of operation.[1] The applicant's (that is, the proposed state member bank's or the bank holding company's) initial projections of asset growth and earnings performances should be reasonably in line with the bank's ability to maintain this ratio without relying on additional capital injections. The de novo policy also applies to newly converted commercial banks through the third year of existence and to other types of institutions that become Federal Reserve members for a three-year period beginning from the date following consummation. Any exceptions to this policy that are being considered for converted banks should be discussed with Board staff. Although a 9 percent tangible leverage ratio is not required after year three, de novo banks are expected to maintain capital ratios commensurate with safety-and-soundness concerns and, generally, well in excess of regulatory minimums.

4020.9.3 CASH FLOWS TO A BHC PARENT

Under the current policy on small one-bank holding companies (see section 2090.2.3), de novo banks may not provide funds for servicing the parent's debt until the bank receives two consecutive CAMELS ratings of 1 or 2 based on full-scope examinations and, in the judgment of the Reserve Bank, can be expected to continue operating soundly. An exception to this prohibition is the tax payments that are made in accordance with the Board's policy under Regulation Y (see section 2070.0 and *FRRS* 4–870).

1. Although this policy applies to a bank holding company's acquisition of a de novo state member bank, the Federal Reserve also encourages bank holding companies' nonmember bank subsidiaries to adhere to the same standards.

4030.0.1 INTRODUCTION

Generally, a subsidiary of a bank holding company is not liable for debts of any other subsidiary of the holding company unless it is contractually obligated through guarantees, endorsements, or other similar instruments. This apparent legal separation may induce false confidence that banks are insulated from problems that may befall other subsidiaries of the holding company. If a nonbank subsidiary of a bank holding company finds itself in serious financial trouble, several results are possible. The holding company may work as it was intended, in that debts of the failing subsidiary are isolated and not transferred to other subsidiaries so that at worst, the subsidiary and the parent (the holding company) fail. In this instance, other subsidiaries, including bank subsidiaries, are unharmed, and after a change in management or ownership, they continue in operation. There is no loss of confidence in the bank by its depositors. However, this is not necessarily the result.

Failure of a nonbank subsidiary may lead to a lack of confidence in the affiliated bank's ability to continue in business, which might precipitate a run on the bank's deposits. The failure of a major nonbank subsidiary then may place its affiliated bank in serious financial trouble. The examiner should assess the impact that the failure or the potential failure of a nonbank subsidiary may have on an affiliated bank with a similar name.

Usually, a financially distressed nonbank subsidiary is aided by the holding company, which will do everything in its power to rescue it from failure. At a minimum, refusal to do so would undermine confidence in the strength of the holding company. Refusal to aid its nonbank subsidiary might even result in a rise in the interest cost of the holding company's future debt in the capital markets and, more than likely, preclude issuance of commercial paper.

A holding company has considerable discretion in choosing how to assist one of its troubled subsidiaries. Because the bank is usually the largest subsidiary, the holding company may attempt to draw upon the resources of the bank to aid the nonbank subsidiary. The bank can transfer a substantial portion of its capital through dividends to the parent company, which may pass these funds on to the troubled nonbank subsidiary. Also, the nonbank may attempt to sell part of its portfolio to the bank subsidiary to improve liquidity. The Board's Interpretation 12 C.F.R. 250.250 (at FRRS 3–1133) limits the sale of nonbank subsidiary loans to the bank affiliate unless the bank had an opportunity to appraise the credit at the inception of the loan. Therefore, the examiner should closely analyze the off-balance-sheet activity of the nonbank subsidiary, particularly activity relating to the sale of loans shortly after they are made. Reference should also be made to section 2020.7, regarding the transfer of low-quality loans or other assets to avoid classification.

4030.0.2 ANALYSIS OF FINANCIAL CONDITION AND RISK ASSESSMENT

Because of the potentially damaging effect on the parent company or its bank subsidiary, the examiner should conduct a detailed analysis of the financial condition and perform a risk assessment of the nonbank subsidiaries. The loss to the holding company may not be confined to the equity in and advances to the subsidiary. The contingent liabilities arising from the nonbank subsidiary's external borrowings are quite often a large multiple of the parent's investment. Particular attention should be directed to holding companies that have made massive capital injections in order to rescue a failing subsidiary or to satisfy the external debt obligations of the subsidiary.

For each bank holding company with nonbank activities, examiners should prepare a written risk assessment of each active nonbank subsidiary, addressing the financial and managerial concerns outlined below.[1] This assessment should be performed with the same frequency required for full-scope inspections. The purpose of this assessment is to identify subsidiaries with a risk profile that warrants an on-site presence, even if the subsidiary does not meet the minimum criteria set forth in section 5000.0.4.4.1, "On-site Reviews of Nonbank Subsidiaries." In formulating this assessment, the examiner should consider all available sources of information including, but not limited to—

- findings, scope, and recency of previous inspections;

1. The assessment of nonbank activities in large, complex organizations may be focused on an intermediate-tier company with oversight responsibility for multiple nonbank subsidiaries.

- ongoing monitoring efforts of surveillance and financial analysis units;
- information received through first-day letters or other pre-inspection communications;
- regulatory reports and published financial information; and,
- reports of internal and external auditors.

The risk assessment should address each nonbank subsidiary's funding risk, earnings exposure, operational risks, asset quality, capital adequacy, contingent liabilities and other off-balance-sheet exposures, management information systems and controls, transactions with affiliates, growth in assets, and the quality of oversight provided by the management of the bank holding company and nonbank subsidiary. The examiner should give particular attention to appraising the quality of a nonbank subsidiary's assets because asset problems therein may lead to other financial problems in the nonbank subsidiary and the parent company or bank affiliates. Examiners are expected to document in the inspection workpapers their assessment of the overall risk posed by each nonbank subsidiary and to summarize their assessment of nonbank activities in the bank holding company inspection report.

The examiner has four alternatives with respect to asset classifications. An appraisal of the degree of risk involved in a given asset leads to a selection. The examiner can either ''pass'' the asset or adversely classify the asset ''substandard,'' ''doubtful'' or ''loss,'' depending on the severity of deterioration noted.

Since the preponderance of all loans are subject to some degree of risk, the following question arises: To what point, or degree, must a given credit deteriorate to warrant a scheduled criticism in the report of inspection? Generally, a passed credit has those characteristics which are recognized as being part of a normal risk asset; the degree of risk is not unreasonable, the loan is being properly serviced, and is either adequately secured or repayment is reasonably assured from a specific source.

Classification units are designated as ''substandard,'' ''doubtful,'' and ''loss.'' A substandard asset is inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the nonbank subsidiary will sustain some loss if the deficiencies are not corrected. An asset classified doubtful has all the weaknesses inherent in one classified substandard with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable. Assets classified loss are considered uncollectible and of such little value that their continuance as recordable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather it is not practical or desirable to defer reserving against this basically worthless asset even though partial recovery may be effected in the future.

Although the System does not apply bank standards when classifying nonbank assets, the classification categories are the same. Examiners of BHC nonbank subsidiaries must appraise the assets in light of industry standards and conditions inherent in the market.

For information on classifying a parent's investment in and advances to a noncredit-extending subsidiary, see Manual section 4070.0, BHC Rating System.

For information on the sufficiency of nonbank valuation reserves, see Manual section 4030.4.

Nonbanks: Credit Extending (Earnings)

When analyzing the earnings of a nonbank subsidiary, the examiner should address two primary questions: (1) Is the return on assets commensurate with the risk associated with the assets? (2) What is the impact of earnings and trends on the parent company and affiliate banks? While a nonbank subsidiary operating at a loss may be in less than satisfactory condition, the loss may not necessarily result in a major adverse impact on the consolidated earnings. The nonbank subsidiary's total assets may be insignificant in relation to the consolidated assets of the BHC, but operating losses may result in a significant reduction in its consolidated earnings position.

In some cases, industry statistics will be available for comparative purposes. However, a favorable comparison should not necessarily be taken as depicting a satisfactory earnings condition. Actions by the parent company could influence the earnings of its subsidiaries. For example, management and/or service fees can be adjusted in order to alter the subsidiary's earnings to desired levels. Also, if the parent company is funding the subsidiary, the cost of funds to the subsidiary can be adjusted above or below the parent's cost of funds thus affecting net income. In addition, an undercapitalized subsidiary with only a marginal return on assets could show a better return on equity than the adequately capitalized independent counterpart experiencing a good return on its assets. As important as return on equity is as a measure of performance, for nonbank subsidiaries, particularly those that are thinly capitalized, absolute level of earnings or return on assets provide a more meaningful measure of earnings performance.

The cash return to the parent from its investment in and advances to a subsidiary less its costs to carry the assets and related expenses should exceed the cash return available from an investment of a similar amount in securities in order to justify retaining the subsidiary. If it seems that an alternative employment of funds would be more rational, the examiner should inquire as to management's plans to improve subsidiary earnings.

Questions to be answered in analyzing the earnings of credit-extending nonbank subsidiaries include:

1. What is the impact on the parent company and affiliate banks of a nonbank subsidiary operating at a loss?
2. Is the return on assets commensurate with the risk inherent in the asset portfolios for those nonbank subsidiaries operating profitably?
3. Are intercompany management/service fees appropriate? From a supervisory perspective, management and service fees should have a direct relationship to and be based solely upon the fair value of goods and services received.
4. Is the subsidiary required to reimburse the parent for the parent's interest expense on borrowed funds, the proceeds of which have been treated as ''advances to subsidiaries?''
5. Is the quality of the subsidiary's earnings sound? For example, is the company understating the provision for loan losses, relying upon nonoperating gains or capitalization of accrued interest?

Special attention should be directed by the examiner to the computation of the company's net interest margin (interest income–interest expense, divided by average earning assets). A study of company yields on investments should provide a measure of the company's ability to invest its funds in earning assets that provide a rate of return above the company's cost of funds. As net interest margins narrow, the company may find it more difficult to generate sufficient income to meet operating expenses.

When discussing growth in earnings, the examiner should clearly differentiate between increases due to increased net interest income on a constant base of earning assets as compared to an increase in the earning asset base with a concurrent proportional increase in net interest income. Any improvement in net interest income as a percentage of earning assets may reflect favorably on management's ability to invest its funds at favorable yields or its ability to find less expensive sources of funds.

Nonbanks: Credit Extending (Leverage) Section 4030.3

As a general rule, credit-extending nonbank subsidiaries are funded by the proceeds of parent company borrowings through instruments such as commercial paper or medium to long-term debt or a combination thereof. Equity generally represents only a small portion of funding resources. There are instances, however, where the nonbank subsidiary will arrange direct funding from external sources. This is especially true in certain States where there are tax advantages associated with direct external funding.

Heavy reliance on borrowed funds by a nonbank subsidiary together with its limited capital position often results in a highly leveraged financial condition that is quite sensitive to changes in money market cost of funds. An examiner should consider what a change in the company's cost of funds might do to its net interest margin and earnings.

Many BHCs operate on the premise that a nonbank subsidiary needs little capital of its own as long as the parent company is adequately capitalized. Implicit in this operating practice is management's belief that the parent could act as a source of financial strength to its subsidiary in the event of difficulty at the subsidiary level. However, experience has indicated that in many cases, once trouble has developed in the subsidiary, the parent is hesitant to direct additional funds to the subsidiary, arguing that it is best to limit losses and exposure and it is imprudent for the parent to inject additional capital at this time. Given this experience, it is often considered appropriate for an examiner to comment on a subsidiary's extended leveraged position, indicating to management that the company has little, if any, capital ‘‘cushion’’ with which to absorb any asset ‘‘shrinkage’’ or loss. The examiner may then conclude and possibly recommend that additional capital be provided for the credit-extending nonbank subsidiary so that its leverage may be reduced and its capital structure altered to reflect more closely an independent organization in the same or similar industry.

Funding should be reviewed to determine that the subsidiary (or the parent) is not mismatching maturities by borrowing short-term funds and applying them to long-term assets that are not readily convertible into cash. A mismatch of maturities can lead to serious liquidity problems.

A primary concern of the holding company examiner is to determine whether the nonbank subsidiary has the capacity to service its debt in an orderly manner. Does the credit-extending nonbank subsidiary have sufficient liquidity and how much will it have to rely on the parent company for funds to retire debt to unaffiliated parties? Factors to be considered include:

1. The subsidiary's asset quality and its ability to convert assets into cash at or near current carrying value. Consider the maturities of borrowings and whether they align with the scheduled assets that will be converted to cash.
2. The subsidiary's and the parent's back-up bank lines of credit available in the event commercial paper cannot be refinanced.
3. The parent company's ability to require its bank or other nonbank subsidiaries to upstream extra dividends to support the illiquid position of one or more of its nonbank subsidiaries.

Nonbanks: Credit Extending (Leverage) Section 4030.3

As a general rule, credit-extending nonbank subsidiaries are funded by the proceeds of parent company borrowings through instruments such as commercial paper or medium to long-term debt or a combination thereof. Equity generally represents only a small portion of funding resources. There are instances, however, where the nonbank subsidiary will arrange direct funding from external sources. This is especially true in certain States where there are tax advantages associated with direct external funding.

Heavy reliance on borrowed funds by a nonbank subsidiary together with its limited capital position often results in a highly leveraged financial condition that is quite sensitive to changes in money market cost of funds. An examiner should consider what a change in the company's cost of funds might do to its net interest margin and earnings.

Many BHCs operate on the premise that a nonbank subsidiary needs little capital of its own as long as the parent company is adequately capitalized. Implicit in this operating practice is management's belief that the parent could act as a source of financial strength to its subsidiary in the event of difficulty at the subsidiary level. However, experience has indicated that in many cases, once trouble has developed in the subsidiary, the parent is hesitant to direct additional funds to the subsidiary, arguing that it is best to limit losses and exposure and it is imprudent for the parent to inject additional capital at this time. Given this experience, it is often considered appropriate for an examiner to comment on a subsidiary's extended leveraged position, indicating to management that the company has little, if any, capital ''cushion'' with which to absorb any asset ''shrinkage'' or loss. The examiner may then conclude and possibly recommend that additional capital be provided for the credit-extending nonbank subsidiary so that its leverage may be reduced and its capital structure altered to reflect more closely an independent organization in the same or similar industry.

Funding should be reviewed to determine that the subsidiary (or the parent) is not mismatching maturities by borrowing short-term funds and applying them to long-term assets that are not readily convertible into cash. A mismatch of maturities can lead to serious liquidity problems.

A primary concern of the holding company examiner is to determine whether the nonbank subsidiary has the capacity to service its debt in an orderly manner. Does the credit-extending nonbank subsidiary have sufficient liquidity and how much will it have to rely on the parent company for funds to retire debt to unaffiliated parties? Factors to be considered include:

1. The subsidiary's asset quality and its ability to convert assets into cash at or near current carrying value. Consider the maturities of borrowings and whether they align with the scheduled assets that will be converted to cash.
2. The subsidiary's and the parent's back-up bank lines of credit available in the event commercial paper cannot be refinanced.
3. The parent company's ability to require its bank or other nonbank subsidiaries to upstream extra dividends to support the illiquid position of one or more of its nonbank subsidiaries.

Nonbanks: Credit Extending (Reserves) Section 4030.4

The purpose of a credit-extending nonbank subsidiary's reserve for bad debts is to provide for known and potential losses in its assets. Although there is no specific formula for measuring the adequacy of a reserve for bad debts, prudence dictates that the reserve account should be maintained at a ''reasonable'' level. What is reasonable depends on the quality of the subsidiary's assets, its collection history and other facts. However, from a supervisory perspective, the reserve for bad debts should at least provide total coverage for all assets classified ''loss'' and still be sufficient to absorb future, unidentified, ''normal'' losses, that are estimated based on the ''doubtful'' and ''substandard'' classifications and the company's historic experience. Valuation reserves for a going concern are not considered adequate unless they can absorb 100 percent of identified losses and still have a balance sufficient to absorb future losses from continued operations.

Examiners should recommend the maintenance of valuation reserves sufficient to offset classified losses and may recommend (as opposed to require) that management charge-off the losses to the reserve account. The charge-off of classified losses is considered appropriate in order to assure that financial statements accurately reflect the company's financial condition. The Federal Reserve System has the responsibility to monitor the bank holding company's nonbank subsidiary statements for accuracy and completeness. Failure by management to reflect accurately the financial condition of the subsidiary and/or parent company could result in a formal corrective action to require charge-offs or other adjustments to financial statements.

For additional information, see Manual section 4030.1, ''Classifications.''

The noncredit-extending nonbank subsidiaries provide services or financial products other than extensions of credit. Some of these companies are insurance agencies, credit life and credit accident and health insurance underwriting companies, electronic data processing centers, management consulting firms and advisory companies.

The operations of some insurance agencies are conducted on the premises of the bank subsidiary(ies) by personnel who often serve as officers or employees of the bank. These companies usually incur little or no liabilities and require only nominal capitalization because risk is limited. However, their commission income is often substantial and a steady source of funds for the parent company. Nevertheless, insurance ''underwriters'' typically have strong capital bases, good liquidity and profitable operations. Furthermore, their operating risks are generally stable and predictable.

Electronic data processing centers are often established under section 4(c)(8) of the Act, which permits them to sell their services to affiliated and unaffiliated customers. Section 4050.0 of this Manual cites examples of how an EDP servicer can have an unfavorable impact on the parent company or its affiliates. Management consulting firms and advisory companies usually require little capitalization and no funding and generate favorable earnings. Of the noncredit-extending subsidiaries, insurance underwriters and EDP servicers are generally the only companies requiring capital and funding in significant amounts.

However, all subsidiaries are subject to some level of risk, which could impact on the BHC. In the case of insurance underwriters, insurance benefits paid could exceed actuarial estimates. Such a situation, however rare, could necessitate financial support from the parent company. EDP servicers could, as a result of excessive computer down-time or equipment obsolescence, impact on consolidated earnings or require additional capital contributions. In addition, contingent liabilities, resulting from legal actions or failure to perform, could be a large multiple of a subsidiary's capital and may affect the parent.

4040.0.1 EARNINGS

In analyzing these subsidiaries, the examiner should consider the following:

1. Are any noncredit-extending subsidiaries operating at a loss or incurring low levels of earnings? If so, what is the cause and does it have a material impact on consolidated earnings?
2. Does the loss result in the subsidiary's reliance on the parent company or bank subsidiary(ies) for financial support? If so, in what form is the support provided?
3. If a loss has been incurred, has management initiated corrective measures? If not, why not?
4. Are the fees charged by the parent for services rendered limited to their *fair market value*? The answer to this question will almost always depend on information supplied by management. Management should be aware of the fair market rates charged by their competitors for similar services rendered.
5. Are the rates charged affiliates commensurate with the services provided and similar to rates charged nonaffiliated customers?

4040.0.2 RISK EXPOSURE

In noncredit-extending subsidiaries, risk exposure, of any meaningful magnitude, is often related to possible losses arising from legal actions for failure to perform services as contracted. The examiner should determine that the subsidiaries are being operated effectively by experienced and competent personnel under the direction of satisfactory management. The examiner should further determine that parent company management exercises appropriate controls over the activities of the subsidiary. Because of potential liability, the examiner should ascertain whether the subsidiaries have adequate insurance coverage (i.e., errors and omissions, public liability, etc.). The examiner should be alert to any contingent liabilities that would have a significant impact of the parent company. For example, the parent company might guarantee the payment of debt or leases for the subsidiary.

The internal services subsidiaries generally derive their business only from the parent company and its affiliates. Examples of such companies include forms printing firms, owners and operators of banking premises, and EDP servicing companies. Banking premises subsidiaries are established to hold or operate properties used wholly or substantially by the parent's subsidiary for its banking business. Generally, their operations do not impact unfavorably on the parent company. However, in instances where the banking premises are not wholly occupied by a banking subsidiary, the examiner should ascertain that the excess space is fully leased/rented. A high vacancy level could result in unprofitable operations or result in an abnormal rental charge to the banking subsidiary in order to operate the subsidiary on a profitable, or break even, basis.

EDP service centers provide bookkeeping or data processing services for the internal operations of the holding company and its subsidiaries, and store and process other banking, financial or related economic data. Generally, these service centers do not have a material effect on consolidated earnings performance as they provide essential services at costs comparable or below their independent counterparts. They usually operate on a break-even basis or at a nominal profit. However, there are some subsidiaries, including EDP servicers, which also provide services indirectly to unaffiliated concerns. EDP servicers operating under section 4(c)(1)(C) of the Act, may provide services to customers of its bank affiliates, provided that the service contract is between the bank and the customer. EDP servicers that operate as independent subsidiaries under section 4(c)(8) of the Act are not similarly restricted and are not considered ''not for profit'' organizations.

A financial analysis of a ''not for profit'' service subsidiary should concentrate on the organization's ability to control its expenses and its ability to provide its services to its affiliates at fair market value. Failure to control expenses may result in excessive charges to affiliates to the detriment of the affiliate.

For purposes of an analysis of earnings, analysts of bank holding companies have placed considerable weight on consolidated BHC financial data. Consolidated data, however, can be very misleading since bank assets and revenues are large in relation to their profit margins. On the other hand, the volume of nonbank assets is generally not nearly as large, but profit margins (or losses) tend to be much more substantial. The organizational structure of a holding company is of prime importance and must first be taken into consideration before attempting to analyze consolidated earnings. As an example, in the case of nonoperating shell bank holding companies with no nonbank subsidiaries, the earnings of the bank subsidiary should be nearly identical with consolidated earnings for the organization. Therefore, in these instances, the views and ratings of the applicable bank regulatory agency would normally be accepted and would apply to consolidated earnings of the BHC. This treatment would not apply to one-bank and multi-bank holding companies with substantial credit-extending nonbank subsidiaries. These holding companies require an in-depth analysis of earnings because of the adverse impact that a poorly operated subsidiary can have upon the consolidated earnings of the BHC.

In order to properly analyze consolidated earnings, it is best to review and study a consolidating statement of income and expense for the purpose of determining each entity's contribution to earnings. It is important to recognize that there need be no direct correlation between the asset size of a subsidiary and its relative contribution to total consolidated earnings. For example, a subsidiary accounting for a minute portion of consolidated assets could substantially negate satisfactory earnings of its larger asset base affiliates because of poor operations and sizeable losses.

When evaluating consolidated earnings, it is important to review the component parts of earnings for prior interim or fiscal periods for comparative purposes in order to determine trends. Considerable attention is to be focused on the various income and expense categories. The net interest income (difference between interest income and interest expense) of a company is highly revealing as it will give an indication of management's ability to borrow at attractive rates and employ those funds with maximum profitable results.

Items having a significant impact on earnings include the noncash charge, "provisions for loan losses" and the volume of nonaccrual and renegotiated or restructured credits. A large provision for loan losses is made necessary by poor quality assets which result in large charge-offs to valuation reserves. In order to replenish the reserve for loan losses to adequate levels to provide ample coverage against known and potential losses, large amounts of revenues must be "set aside." Nonperforming and renegotiated credits either provide no income or provide a reduced rate of income to the extent that the assets are no longer profitable relative to the cost of funds and the cost of doing business. In situations where earnings are below average or unsatisfactory, a comment concerning the amount of provision for loan losses and volume of nonperforming loans is warranted in the financial analysis.

Other items of significance include taxes, particularly where tax credits are indicative of loss operations, and extraordinary or nonrecurring items. Extraordinary gains or losses are not the result of the normal operations of a company and should be analyzed independently from operating earnings. Generally, extraordinary items result from the sale of current or fixed assets. When significant amounts are involved, examiners should determine the underlying reasons behind such transactions.

After an analysis has been made of the pertinent components of earnings, analyze the "bottom line" or net income of the consolidated company. Generally, analysts relate net income to several benchmarks in order to evaluate performance. The ratios of earnings as a percentage of average equity capital or average assets are most widely used. Conclude the analysis with a comparison of a company's ratios in relation to its peer group.

Comparatively low earnings relative to its peer group may be a reflection of problems and weaknesses such as lax or speculative credit practices (resulting in nonearning assets or loan losses), high interest costs resulting from excessive debt, or rapid expansion into competitive industries subject to wide variations in income potential.

Earnings on a consolidated basis are the best measure of performance. Moreover, while the earnings of individual subsidiaries must not be ignored, the ability of holding company management to control the level of reported earnings in any one subsidiary reaffirms the practicality of using the consolidated approach to analyze holding company profitability.

Essentially, the following points summarize areas which should be considered when analyzing consolidated earnings:

1. The return on consolidated assets and equity capital, as well as historical trends and peer group comparisons.

2. The ability of earnings to provide for capital growth, especially when taking into consideration recent and planned asset and deposit growth.

3. The ''quality'' of earnings is affected by the sufficiency of the provision to loan loss reserves and the asset quality of the organization. A high level of earnings that did not include sufficient provisions to the loan loss reserve during a period of high charge-offs may result in reductions in the reserve balance and thereby call to question the merits of high earnings in the face of declining reserve balances.

4. The ability of management to prepare realistic earnings projections in light of the risk structure and quality of assets.

The evaluation of asset quality based on classifications of "substandard, doubtful and loss," is one of the most important elements to be taken into consideration when performing a financial analysis of a holding company because of the severe impact that poor quality assets can have on the overall condition of the organization. Procedures to measure asset quality of banks involve the use of the relationship of weighted classified assets to Tier 1 capital funds and total classifications to total capital funds. Accordingly, consolidated asset quality could be based on the relationship of aggregate weighted classified assets of the parent company, bank subsidiary(ies) and nonbank subsidiary(ies), to Tier 1 capital.

However, a problem encountered when viewing asset quality on a consolidated basis is the fact that in multi-bank holding companies there is usually a large timing difference between the dates of examinations of the banking subsidiaries. Therefore, the aggregating of classified bank assets from reports prepared at different times, reduces the currentness and validity of conclusions drawn. This problem can only be eliminated by using common examination and inspection dates which are not generally available.

Despite the shortcoming of using classification information from different dates, an examiner may determine that there is a sufficient measure of validity in using the data and may present an analysis based on consolidated weighted classifications. For example, if there are a small number of bank subsidiaries and if the examination dates are near a common point in time, timing differences may be inconsequential. Or, if a review of several years of a bank's examinations reveals a relatively constant or stable level of classifications, then the timing of the most recent examination would not invalidate use of the analytical tool. As such, the technique may be employed when circumstances permit.

Other factors to be considered in determining asset quality include the levels of nonaccrual and renegotiated loans, other real estate owned and past due loans. While these assets may not be subject to classification, they usually represent former or emerging problem loans. Moreover, in the aggregate, they may represent a significant proportion of the asset portfolio. If such is the case, they should be taken into consideration when the examiner determines his overall rating of asset quality.

It is difficult to rely on the adequacy of consolidated reserves because they are "fractured" and protect portfolios in different organizations and may not be interchangeable or transferable. The reserve of each entity in the corporate structure must be reviewed or analyzed individually. For example, if consolidated reserves appear inadequate, there is no consolidated reserve account per se that could be increased to adequate proportions. Consequently, the inadequacy would have to be identified at the parent or subsidiary level. Conversely, if consolidated reserves appear to adequately cover the aggregate of all "loss" and a certain portion of "doubtful," it does not insure that all subsidiaries have adequate reserves. Nevertheless, despite the shortcomings of using consolidated reserves, the analyst should not hesitate to calculate and present a measure of the relationship of consolidated reserves to consolidated loans.

4060.3.1 INTRODUCTION TO EXAMINER GUIDELINES FOR RISK-BASED CAPITAL

To assist in assessing the capital adequacy of bank holding companies, the Board has established two measures of capital adequacy, the risk-based capital measure and the tier 1 leverage measure. The tier 1 leverage measure is discussed in section 4060.4.

4060.3.2 OVERVIEW OF RISK-BASED CAPITAL GUIDELINES

The Board's risk-based capital guidelines (the guidelines) focus principally on the credit risks associated with the nature of banking organizations' on- and off-balance-sheet assets and on the type and quality of their capital. The information provided in this section should be used in conjunction with the risk-based capital guidelines in verifying the bank holding company's risk-based capital. Examiners must refer to Regulation Y (12 C.F.R. 225), appendix A, for a complete description of the risk-based capital adequacy guidelines for bank holding companies.

The guidelines do not incorporate other factors that may also affect the financial condition of banking organizations. These factors include overall interest-rate exposure; liquidity, funding, and market risks; the quality and level of earnings; the effectiveness of loan and investment policies on operational results and the quality of assets; and management's ability to monitor and control financial and operating risks.

The major objectives of the guidelines are to make regulatory capital requirements more sensitive to differences in credit-risk profiles among banking organizations; to factor off-balance-sheet exposures into the assessment of capital adequacy; to minimize disincentives to holding liquid, low-risk assets; and to achieve greater consistency in the evaluation of the capital adequacy of major banking organizations worldwide.

The guidelines set forth *minimum* supervisory capital standards for banking organizations. Therefore, banking organizations are expected to operate with capital levels above the minimum ratios. This is particularly true for banking organizations that are undertaking significant expansion or that are exposed to high or unusual levels of risk. The guidelines generally apply to those bank holding companies that have $150 million or more in assets on a consolidated basis.

At year-end 1992 and thereafter, the risk-based capital guidelines require banking organizations to meet a standard: a minimum ratio of total capital to risk-weighted assets of 8.0 percent and a minimum ratio of tier 1 capital to risk-weighted assets of 4.0 percent.

The risk-based capital guidelines are intended to better reflect the differences in credit-risk profiles among banking organizations and explicitly factor off-balance-sheet exposures into the assessment of capital adequacy by weighting on- and off-balance-sheet items by perceived degrees of credit risk. The basic elements of the framework include definitions of capital that include core elements and supplementary elements, assignment of on- and off-balance-sheet items to broad categories of credit risk, and the methodology for computing risk-based capital ratios for banking organizations on an interim and final basis.

In addition, examiners should be aware that when certain organizations that engage in trading activities calculate their risk-based capital ratio under appendix A, they must also refer to appendix E of Regulation Y, which incorporates capital charges for certain market risks into the risk-based capital ratio. Examiners should also refer to the *Trading and Capital-Markets Activities Manual* for more detailed supervisory guidance. When calculating their risk-based capital ratio under appendix A, such organizations are required to refer to appendix E for supplemental rules to determine qualifying and excess capital, calculate risk-weighted assets, calculate market-risk-equivalent assets, and calculate risk-based capital ratios adjusted for market risk.

4060.3.2.1 Definition of Capital

For the purposes of the risk-based capital guidelines, a banking organization's total capital will consist of two types of components: core capital elements and supplementary capital elements. To qualify as an element of tier 1 or tier 2 capital, a capital instrument must be unsecured and may not contain or be covered by any covenants, terms, or restrictions that are inconsistent with safe and sound banking practices.

4060.3.2.1.1 Tier 1 Capital

Tier 1 capital will consist of permanent core capital elements (common stockholders' equity, noncumulative perpetual preferred stock, a limited amount of qualifying cumulative perpetual preferred stock, and minority interest in the equity of consolidated subsidiaries) less any amounts of goodwill and other intangible assets, credit-enhancing interest-only strips receivables, and nonfinancial equity investments that are required to be deducted. Common stockholders' equity is limited to common stock; related surplus; and retained earnings, including capital reserves and adjustments for the cumulative effect of foreign-currency translation, net of any treasury stock, less net unrealized holding losses on available-for-sale equity securities with readily determinable fair values. For this purpose, net unrealized holding gains on such equity securities and net unrealized gains (losses) on available-for-sale debt securities are not included in common stockholders' equity.

4060.3.2.1.1.1 Common Stock Considerations

A capital instrument that is not permanent, or that has preference with regard to liquidation or the payment of dividends, is not deemed to be common stock, regardless of whether it is called common stock. Other preferences may also call into question whether the capital instrument is common stock. Close scrutiny should be paid to the terms of common stock issues that have issued more than one class of common stock. Preference features may be found in one of the classes and, if so, that class generally should not be treated as common stock.

From a supervisory standpoint, it is desirable that voting common stockholders' equity remain the dominant form of tier 1 capital. Accordingly, the risk-based capital guidelines state that bank holding companies should avoid overreliance on nonvoting equity elements in tier 1 capital. Nonvoting equity elements can arise in connection with common stockholders' equity in cases when a bank holding company has two classes of common stock, one voting and the other nonvoting. Alternatively, one class may have so-called super-voting rights entitling the holder to substantially more votes per share than the other class. In this case, the so-called super-voting shares may have so many votes per share that the voting power of the other shares is effectively overwhelmed.

Although no formal limit is placed on the amount of noncumulative perpetual preferred stock that may be included in tier 1 capital, the guidelines state that bank holding companies should avoid overreliance on preferred stock and other nonvoting equity elements in tier 1 capital.[1] Bank holding companies that have nonvoting, or effectively nonvoting, common equity and tier 1 perpetual preferred stock in excess of their voting common stock are clearly overrelying on nonvoting equity elements in tier 1 capital. In such cases, it may be appropriate to reallocate some of the nonvoting equity elements from tier 1 capital to tier 2 capital.

4060.3.2.1.1.2 Perpetual Preferred Stock Considerations

Traditional convertible perpetual preferred stock, which the holder can convert into a fixed number of common shares at a preset price, ordinarily does not raise supervisory concerns and generally qualifies as tier 1 capital. However, forms of preferred stock that the holder must or can convert into common stock at the market price prevailing at the time of conversion do raise supervisory concerns. Such preferred stock may be converted into an increasing number of common shares as the banking organization's condition deteriorates, for example, as the market price of the common stock falls. The potential conversion of such preferred stock into common stock could pose a threat of dilution to the existing common shareholders. The threat of dilution could make the issuer reluctant to sell new common stock, or it could place the issuer under strong market pressure to redeem or repurchase the convertible preferred stock. Such convertible preferred stock generally should be excluded from tier 1 capital.

Perpetual preferred stock issues may include other provisions or pricing mechanisms that would provide significant incentives or pressures for the issuer to redeem the stock for cash, especially at a time when the issuer is in a weakened financial condition. As a general matter, an issue that contains such features would be ineligible for tier 1 treatment.

1. A noncumulative issue may not permit the accruing or payment of unpaid dividends in any form, including the form of dividends payable in common stock. Perpetual preferred stock that calls for the accumulation and future payment of unpaid dividends is deemed to be cumulative, regardless of whether it is called noncumulative, and is generally includable in tier 2 capital.

4060.3.2.1.1.3 Considerations Regarding Minority Interest in Equity Accounts of Consolidated Subsidiaries

Minority interest in equity accounts of consolidated subsidiaries is included in tier 1 capital because, as a general rule, it represents equity that is freely available to absorb losses in operating subsidiaries. Banking organizations are expected to avoid using minority interest as an avenue for introducing elements that do not otherwise qualify as tier 1 capital (such as cumulative or auction-rate perpetual preferred stock) or that would, in effect, result in an excessive reliance on preferred stock within tier 1 capital. If a banking organization uses its minority interest in these ways, supervisory concerns may warrant reallocating some of the minority interest in equity accounts of consolidated subsidiaries from tier 1 to tier 2 capital.

Whenever a banking organization has included perpetual preferred stock of an operating subsidiary in minority interest, a possibility exists that such capital has been issued in excess of the subsidiary's needs, for the purpose of raising cheaper capital. Stock issued under these circumstances may, in substance if not in legal form, be secured by the subsidiary's assets. If the subsidiary fails, the outside preferred investors would have a claim on the subsidiary's assets that is senior to the claim that the banking organization, as a common shareholder, has on those assets. Therefore, as a general rule, issuances in excess of a subsidiary's needs do not qualify for inclusion in capital. The possibility that a secured arrangement exists should be considered if the subsidiary lends significant amounts of funds to the parent banking organization, is unusually well capitalized, has cash flow in excess of its operating needs, holds a significant amount of assets with minimal credit risk (for example, U.S. Treasury securities) that are not consistent with the subsidiary's operations, or has issued preferred stock at a significantly lower rate than the parent could obtain for a direct issue.

Some bank holding companies may use a nonoperating subsidiary or special-purpose entity (SPE) to issue perpetual preferred stock to outside investors. Such a subsidiary may be set up offshore so that it can receive favorable tax treatment for the dividends paid on the stock. In such arrangements, a strong presumption exists that the stock is, in effect, secured by the assets of the subsidiary. It has been agreed upon internationally that a banking organization may not include in its tier 1 capital minority interest in the perpetual preferred stock of nonoperating subsidiaries. Furthermore, such minority interest may not be included in tier 2 capital unless it can conclusively be proven that the stock is unsecured. Even if the banking organization's accountants have permitted it to account for perpetual preferred stock issued through an SPE as stock of the banking organization, rather than as minority interest in the equity accounts of a consolidated subsidiary, the stock may not be included in tier 1 capital and most likely is not includable in tier 2 capital.

Banking organizations may also use operating or nonoperating subsidiaries to issue subordinated debt. As with perpetual preferred stock issued through such subsidiaries, it is possible that such debt is in effect secured and therefore not includable in capital.

4060.3.2.1.1.4 Minority Interests in Small Business Investment Companies

Minority interests in small business investment companies (SBICs), investment funds that hold nonfinancial equity investments, and subsidiaries engaged in nonfinancial activities are not included in the banking organization's tier 1 or total capital base if the banking organization's interest in the company or fund is held under the legal authorities listed in section II.B.5.b. of the capital guidelines (12 C.F.R. 225, appendix A).

4060.3.2.1.1.5 Certain Tier 1 Cumulative Preferred Stock

On October 21, 1996, the Board approved the use of certain cumulative preferred stock instruments in tier 1 capital for bank holding companies. These instruments, which are marketed under a variety of proprietary names, such as MIPS and TOPRS, are issued out of a special-purpose subsidiary that is wholly owned by the parent company. The proceeds are lent to the parent in the form of a very long-term, deeply subordinated note.

Bank holding companies seeking to issue such securities should consult with their District Federal Reserve Bank. Such arrangements, which give rise to minority interest upon consolidation of the subsidiary with the parent holding company, normally will be accorded tier 1 capital status.

To be eligible as tier 1 capital, such instruments must provide for a minimum five-year consecutive deferral period on distributions to preferred shareholders. In addition, the intercompany loan must be subordinated to all subordinated debt and have the longest feasible maturity.

The amount of these instruments, together with other cumulative preferred stock a bank holding company may include in tier 1 capital, is limited to 25 percent of tier 1 capital. Like other preferred stock includable in capital, these instruments require Federal Reserve approval before they may be redeemed.

4060.3.2.1.1.6 Trust Preferred Stock

In order for trust preferred stock to be included in tier 1 capital, the issuing bank holding company must have the ability to defer payments for at least 20 consecutive quarters without giving rise to an event of default.[2] Such a deferral feature, which typically is cumulative in trust preferred stock, is essential in a tier 1 instrument because it allows the issuer to conserve its cash resources at a time when its financial condition is deteriorating.

When a banking organization hedges trust preferred stock through an interest-rate swap with a deferral feature, the deferral terms on the swap must be symmetrical for both the organization and its counterparty and must not have the effect of draining the organization's resources in a time of stress. The swap contract, for example, must not provide that the counterparty can defer, on a cumulative basis, its swap payments due to the banking organization during a trust preferred deferral period when the banking organization must continue to make payments to the counterparty. A plain-vanilla swap, when neither the banking organization nor its counterparty may defer payments, generally is an acceptable instrument for hedging the interest-rate risk on trust preferred stock included in tier 1 capital. Trust preferred stock issues may not be included in tier 1 capital if they are covered by an interest-rate derivative contract with asymmetrical deferral terms. (See SR-02-10.)

4060.3.2.1.1.7 Forward Equity Transactions

Banking organizations have engaged in various types of forward transactions relating to the repurchase of their common stock. In these transactions, the banking organization enters into an arrangement with a counterparty, usually an investment bank or another commercial bank, under which the counterparty purchases common shares of the banking organization, either in the open market or directly from the institution. The banking organization agrees that it will repurchase those shares at an agreed-on forward price at a later date (typically three years or less from the execution date of the agreement). These transactions are used to lock in stock repurchases at price levels that are perceived to be advantageous and are also a means of managing regulatory capital ratios.

Banking organizations have generally continued to treat shares under forward equity arrangements as tier 1 capital. However, these transactions can impair the permanence of the shares and typically have certain features that are undesirable from a supervisory point of view. For these reasons, shares covered by these arrangements have qualities that are inconsistent with tier 1 capital status.[3] Accordingly, any common stock covered by forward equity transactions entered into after the issuance of SR-01-27 (November 9, 2001) will be excluded from the tier 1 capital of a bank holding company (or a state member bank), other than those transactions specified for deferred compensation or other employee benefit plans. This exclusion applies even if the transactions were executed under a currently existing master agreement. The amount to be excluded is equal to the common stock, surplus, and retained earnings associated with the shares. This guidance does not apply to shares covered under traditional stock buyback programs that do not involve forward agreements.

4060.3.2.1.2 Tier 2 Capital

Tier 2 capital consists of (1) a limited amount of the allowance for loan and lease losses;[4] (2) cumulative perpetual preferred stock (original term of 20 years or more) including related

2. The inclusion of trust preferred stock in tier 1 capital was authorized in an October 21, 1996, Board release.

3. Section 4060.3.2.1.1.1 states that "a capital instrument that is not permanent...is not deemed to be common stock, regardless of whether it is called common stock." See also section 3020.1 of the *Commercial Bank Examination Manual.*

4. This allowance is limited to 1.25 percent of risk-weighted assets.

surplus (also includes cumulative perpetual preferred stock exceeding its tier 1 limitation, including auction-rate preferred stock, or any other perpetual preferred stock in which the dividend rate is reset periodically, in whole or in part, based on the holding company's financial condition); (3) hybrid capital instruments, perpetual debt, mandatory convertible debt securities; (4) limited amounts (50 percent of tier 1 capital) of term subordinated debt, intermediate-term preferred stock, including related surplus, and unsecured long-term debt issued before March 12, 1988, that qualified as secondary capital when issued; and (5) limited unrealized holding gains on equity securities. Tier 2 capital may not exceed tier 1 capital (net of goodwill, other intangible assets, and interest-only receivables and nonfinancial equity investments that are required to be deducted in accordance with section II.B. of the risk-based capital adequacy guidelines).

The amount of mandatory convertible securities that have the proceeds of common or perpetual preferred stock dedicated to retire or redeem them, and a maximum maturity of 12 years, should be treated as term subordinated debt. Mandatory convertible securities, net of the stock dedicated to redeem or retire the issues, are included within tier 2 on an unlimited basis.

There is a limit on the amount of unrealized holding gains on equity securities and the unrealized gains (losses) on other assets. Up to 45 percent of pretax net unrealized holding gains (that is, the excess, if any, of the fair value over historical cost) on available-for-sale equity securities, with readily determinable fair values, may be included in supplementary capital. However, the Federal Reserve may exclude all or a portion of these unrealized gains from tier 2 capital if it determines that the equity securities are not prudently valued. Unrealized gains (losses) on other types of assets, such as bank premises and available-for-sale-debt securities, are not included in supplementary capital. The Federal Reserve may take these unrealized gains (losses) into account as additional factors when assessing an institution's overall capital adequacy.

4060.3.2.1.3 Deductions from Tier 1 and Tier 2 Capital

The risk-based capital guidelines require that 50 percent of the aggregate amount of capital investments in unconsolidated banking and finance subsidiaries should be deducted from the bank holding company's tier 1 capital and 50 percent from its tier 2 capital. If the amount of tier 2 capital is insufficient for the required deduction, the additional amount needed would be deducted from tier 1 capital. Reciprocal holdings of other banking organizations' capital instruments are to be deducted from the sum of tier 1 and tier 2 capital.

4060.3.2.2 Procedures for Risk-Weighting of On- and Off-Balance-Sheet Items

The risk-based capital guidelines establish four general categories of credit risk. These categories of credit risk reflect the nature and quality of collateral, guarantees, and organizations issuing or backing obligations. Assets and credit-equivalent amounts of off-balance-sheet items are allocated to the various categories, which are assigned weights of 0 percent, 20 percent, 50 percent, and 100 percent depending on the perceived level of credit risk to the banking organization. (See 12 C.F.R. 225, appendix A, section III (and its attachment III), for a more detailed listing of the assets assigned to each risk-weight category.)

The majority of the items will fall in the 100 percent risk-weight category. A brief explanation of the components of each category follows. For more detailed information, see the capital adequacy guidelines.

4060.3.2.2.1 Risk Categories

4060.3.2.2.1.1 Category 1: Zero Percent

Category 1 includes cash (domestic and foreign) owned and held in all offices of the bank or in transit, as well as gold bullion held in the bank's own vaults or in another bank's vaults on an allocated basis to the extent it is offset by gold bullion liabilities. The category also includes all direct claims on (including securities, loans, and leases), and the portions of claims that are directly and unconditionally guaranteed by, the central governments of the Organization for Economic Cooperation and Development (OECD) countries and U.S. government agencies, as well as all direct local currency claims on, and the portions of local currency claims that are directly and unconditionally guaranteed by, the central governments of non-OECD countries, to the extent that the bank has liabilities booked in that currency. A claim is not considered to be unconditionally guaranteed by a central government if the validity of the guarantee depends on some affirmative action by the holder or a third party. Generally, securities guaranteed by the U.S. government or its agencies that are actively traded in financial markets, such as Government National Mortgage Association (GNMA) securities, are considered to be unconditionally guaranteed. This zero percent category also includes claims collateralized (1) by cash on deposit in the bank or (2) by securities issued or guaranteed by OECD central governments or U.S. government agencies for which a positive margin of collateral is maintained on a daily basis, fully taking into account any change in the bank's exposure to the obligor or counterparty under a claim in relation to the market value of the collateral held in support of that claim.

4060.3.2.2.1.2 Category 2: 20 percent

Category 2 includes cash items in the process of collection, both foreign and domestic; short-term claims on (including demand deposits), and the portions of short-term claims that are guaranteed by, U.S. depository institutions and foreign banks; and long-term claims on, and the portions of long-term claims that are guaranteed by, U.S. depository institutions and OECD banks. This category also includes the portions of claims that are conditionally guaranteed by OECD central governments and U.S. government agencies, as well as the portions of local currency claims that are conditionally guaranteed by non-OECD central governments, to the extent that the bank has liabilities booked in that currency. In addition, this category includes claims on, and the portions of claims that are guaranteed by, U.S. government–sponsored agencies and claims on, and the portions of claims guaranteed by, the International Bank for Reconstruction and Development (the World Bank), the International Finance Corporation, the Inter-American Development Bank, the Asian Development Bank, the African Development Bank, the European Investment Bank, the European Bank for Reconstruction and Development, the Nordic Investment Bank, and other multilateral lending institutions or regional development banks in which the U.S. government is a shareholder or contributing member. General obligation claims on, or portions of claims guaranteed by the full faith and credit of, states or other political subdivisions of the United States or other countries of the OECD-based group are also assigned to this category. Category 2 also includes the portions of claims (including repurchase transactions) that are (1) collateralized by cash on deposit in the bank or by securities issued or guaranteed by OECD central governments or U.S. government agencies that do not qualify for the zero percent risk-weight category; (2) collateralized by securities issued or guaranteed by U.S. government–sponsored agencies; or (3) collateralized by securities issued by multilateral lending institutions or regional development banks in which the U.S. government is a shareholder or contributing member.

This risk category also includes claims[5] on, and claims guaranteed by, a qualifying securities firm[6] incorporated in the United States or other member of the OECD-based group of countries provided that (1) the qualifying securities firm has a long-term issuer credit rating, or a rating on at least one issue of long-term debt, in one of the three highest investment-grade rating categories from a nationally recognized statistical rating organization, and (2) the claim is guaranteed by the firm's parent company, and the parent company has such a rating. If ratings are available from more than one rating agency, the lowest rating will be used to determine whether the rating requirement has been met. This category also includes certain collateralized claims on, or guaranteed by, a qualifying securities firm in such a country, without regard to satisfaction of the rating standard, provided that the claim arises under a contract that (1) is a reverse-repurchase/repurchase agreement or securities-lending/borrowing transaction executed using standard industry documentation; (2) is collateralized by debt or equity securities that are liquid and readily marketable; (3) is marked to market daily; (4) is subject to a daily margin-maintenance requirement under the standard industry documentation; and (5) can

5. Claims on a qualifying securities firm that the firm, or its parent company, uses to satisfy its applicable capital requirements are not eligible for this risk weight.

6. With regard to securities firms incorporated in the United States, qualifying securities firms are those securities firms that are broker-dealers registered with the Securities and Exchange Commission (SEC) and that are in compliance with the SEC's net capital rule, 17 C.F.R. 240.15c3-1.With regard to securities firms incorporated in other countries in the OECD-based group of countries, qualifying securities firms are those securities firms that a banking organization is able to demonstrate are subject to consolidated supervision and regulation (covering their direct and indirect subsidiaries, but not necessarily their parent organizations) comparable to that imposed on banks in OECD countries. Such regulation must include risk-based capital requirements comparable to those applied to banks under the Basel Accord.

be liquidated, terminated, or accelerated immediately in bankruptcy or a similar proceeding, and the security or collateral agreement will not be stayed or avoided, under applicable law of the relevant jurisdiction.[7]

4060.3.2.2.1.3 Category 3: 50 percent

Category 3 includes loans fully secured by first liens on one- to four-family residential properties (either owner-occupied or rented), or on multifamily residential properties, that meet certain criteria. To be included in category 3, loans must have been made in accordance with prudent underwriting standards, be performing in accordance with their original terms, and not be 90 days or more past due or carried in nonaccrual status. The following additional criteria must be applied to a loan secured by a multifamily residential property that is included in this category: (1) All principal and interest payments on the loan must have been made on time for at least the year preceding placement in this category, or, in the case of an existing property owner who is refinancing a loan on that property, all principal and interest payments on the loan being refinanced must have been made on time for at least the year preceding placement in this category; (2) amortization of the principal and interest must occur over a period of not more that 30 years, and the minimum original maturity for repayment of principal must not be less than seven years; and (3) the annual net operating income (before debt service) generated by the property during its most recent fiscal year must not be less than 120 percent of the loan's current annual debt service (115 percent if the loan is based on a floating interest rate) or, in the case of a cooperative or other not-for-profit housing project, the property must generate sufficient cash flow to provide comparable protection to the institution.

Also included in category 3 are privately issued mortgage-backed securities, provided that (1) the structure of the security meets the criteria described in section III.B.3. of the risk-based capital guidelines (12 C.F.R. 225, appendix A); (2) if the security is backed by a pool of conventional mortgages on one- to four-family residential or multifamily residential properties, each underlying mortgage meets the criteria described above for eligibility for the 50 percent risk category at the time the pool is originated; (3) if the security is backed by privately issued mortgage-backed securities, each underlying security qualifies for the 50 percent risk category; and (4) if the security is backed by a pool of multifamily residential mortgages, principal and interest payments on the security are not 30 days or more past due. Privately issued mortgage-backed securities that do not meet these criteria or that do not qualify for a lower risk weight are generally assigned to the 100 percent risk category. Also assigned to category 3 are revenue (nongeneral obligation) bonds or similar obligations, including loans and leases, that are obligations of states or other political subdivisions of the United States (for example, municipal revenue bonds) or other countries of the OECD-based group, but for which the government entity is committed to repay the debt with revenues from the specific projects financed, rather than from general tax funds. Credit-equivalent amounts of derivative contracts involving standard risk obligors (that is, obligors whose loans or debt securities would be assigned to the 100 percent risk category) are included in the 50 percent category, unless they are backed by collateral or guarantees that allow them to be placed in a lower risk category.

4060.3.2.2.1.4 Category 4: 100 percent

All assets not included in the categories above are assigned to category 4, which comprises standard risk assets. The bulk of the assets typically found in a loan portfolio would be assigned to the 100 percent category.

Category 4 includes long-term claims on, and the portions of long-term claims that are guaranteed by, non-OECD banks, and all claims on non-OECD central governments that entail some degree of transfer risk. This category includes all claims on foreign and domestic private-sector obligors not included in the categories above (including loans to nondepository financial institutions and bank holding companies); claims on commercial firms owned by the public sector; customer liabilities to the bank on acceptances outstanding that involve standard risk claims, investments in fixed assets, premises, and other real estate owned; common and preferred stock of corporations, including stock

7. For example, a claim is exempt from the automatic stay in bankruptcy in the United States if it arises under a securities contract or a repurchase agreement subject to section 555 or 559 of the Bankruptcy Code, respectively (11 U.S.C. 555 or 559); a qualified financial contract under section 11(e)(8) of the Federal Deposit Insurance Act (12 U.S.C. 1821(e)(8)); or a netting contract between financial institutions under sections 401–407 of the Federal Deposit Insurance Corporation Improvement Act of 1991 (12 U.S.C. 4401–4407) or the Board's Regulation EE (12 C.F.R. 231).

acquired for debts previously contracted; all stripped mortgage-backed securities and similar instruments; and commercial and consumer loans (except those assigned to lower risk categories due to recognized guarantees or collateral and loans secured by residential property that qualify for a lower risk weight).

This category also includes industrial-development bonds and similar obligations issued under the auspices of states or political subdivisions of the OECD-based group of countries for the benefit of a private party or enterprise when that party or enterprise, not the government entity, is obligated to pay the principal and interest. All obligations of states or political subdivisions of countries that do not belong to the OECD-based group are also assigned to category 4. The following assets are assigned a risk weight of 100 percent if they have not been deducted from capital: investments in unconsolidated companies, joint ventures, or associated companies; instruments that qualify as capital that are issued by other banking organizations; and any intangibles, including those that may have been grandfathered into capital.

4060.3.2.2.2 Application of the Risk Weights

The appropriate aggregate dollar value of the amount in each category is multiplied by the risk weight associated with that category. The resulting weighted values for each of the risk categories are added together.

Off-balance-sheet items are incorporated into the risk-based capital ratio through a two-step process. First, a credit-equivalent amount[8] for the item, except for direct-credit substitutes and recourse obligations, is calculated by multiplying the item by a credit-conversion factor. Second, the credit-equivalent amount of the off-balance-sheet item is then categorized in the same manner as on-balance-sheet items, that is, by credit risk, according to the obligor or, if relevant, the guarantor or nature of the collateral. The credit-conversion factors, that is, factors ranging from 0 to 100 percent,[9] are intended to reflect the risk characteristics of the activity in terms of an on-balance-sheet equivalent. The resulting sum of the risk-adjusted on- and off-balance-sheet items is the bank holding company's total risk-weighted assets, which comprises the denominator of the risk-based capital ratio. Generally, if an item may be assigned to more than one risk category, that item should be assigned to the category that has the lowest risk weight.

Collateral guarantees and other considerations. Under the guidelines, the primary determinant of the risk category of a particular on- or off-balance-sheet item is the obligor or, if relevant, the guarantor or nature of the collateral. To a limited extent, collateral or guarantees securing some obligations may be used to place an item or items in lower risk weights than would be available to the obligor. The forms of collateral that are formally recognized and available for this purpose are cash on deposit in subsidiary lending institutions;[10] securities issued or guaranteed by the central governments of the OECD-based group of countries, U.S. government agencies, or U.S. government–sponsored agencies; and securities issued by multilateral lending institutions or regional development banks. Obligations that are fully secured by such collateral are assigned to the 20 percent risk category.

In order for a claim to be considered collateralized for risk-based capital purposes, the underlying arrangements must provide that the claim will be secured by recognized collateral throughout its term. A commitment may be considered collateralized for risk-based capital purposes to the extent that its terms provide that advances made under the commitment will be secured throughout their term.

The market value of eligible securities used as collateral should be used to determine whether an obligation is partially or fully secured. For partially secured obligations, the secured portion is assigned a 20 percent risk weight. Any unsecured portion is assigned the risk weight appropriate for the obligor or guarantor, if any.

8. For interest-rate and foreign-exchange contracts, the credit-equivalent amount is determined by multiplying the notional amount by a conversion factor (which is different for contracts maturing in one year or less and those maturing in over a year) and adding the resulting amount to the positive mark-to-market values of the contracts. The maximum risk weight applied to interest-rate and exchange-rate contracts is 50 percent.

9. Interest-rate and exchange-rate contracts use conversion factors significantly below those used for other off-balance-sheet activities. These factors are assigned by remaining maturity, one year or less or more than one year, and range from 0 to 5 percent.

10. With regard to syndicated credits secured by cash on deposit in the lead institution, there is a limited exception to the rule that cash must be on deposit in the lending institution to be recognized as collateral. A lending institution participating in the syndication may treat its pro rata share of the credit as collateralized if it has a perfected interest in its pro rata share of the collateral.

The extent to which an off-balance-sheet item is secured by collateral is determined by the degree to which the collateral covers the face amount of the item before it is converted to a credit-equivalent amount and assigned to a risk category.

Certain guarantees are recognized for risk-based capital purposes as follows: guarantees of the OECD and non-OECD central governments; U.S. government agencies and U.S. government–sponsored agencies; state and local governments of the OECD-based group of countries; multilateral lending institutions and regional development banks; and U.S. depository institutions and foreign banks. If an obligation is partially guaranteed, the portion that is not fully covered is assigned the risk weight appropriate for the obligor or collateral, if any. An obligation that is covered by two types of guarantees having different risk weights is apportioned between the two risk categories appropriate for the guarantors. Direct-credit substitutes, assets transferred with recourse, and securities issued in connection with asset securitizations and structured financings are treated as described in section 4060.3.5.3.

4060.3.3 IMPLEMENTATION

The guidelines apply to those bank holding companies having $150 million or more in assets on a consolidated basis. For bank holding companies having *less than* $150 million in assets on a consolidated basis, the guidelines will apply only to their subsidiary banks unless (1) the parent bank holding company is engaged in a nonbank activity involving significant leverage (including off-balance-sheet activity) or (2) the parent holding company has a significant amount of outstanding debt that is held by the general public.

By year-end 1992 and thereafter, banking organizations are expected to meet the minimum risk-based capital ratio. The minimum ratio of capital to risk-weighted assets should be 8 percent or more with at least 4 percent taking the form of tier 1 capital. An assessment of the banking organization's capital adequacy should reflect the level and severity of the classified assets summarized in the examination and inspection.

Banking organizations that do not meet the minimum risk-based capital ratios, or that are considered to lack sufficient capital to support their activities, are expected to develop and implement capital plans acceptable to the Federal Reserve for achieving adequate levels of capital that will satisfy the provisions of the guidelines or that will satisfy agreed-upon arrangements established with the Federal Reserve for designated banking organizations. In addition, such banking organizations should avoid any actions, including increased risk-taking or unwarranted expansion, that would lower or further erode their capital positions. In these cases, examiners are to review and comment on banking organizations' capital plans and their progress in meeting minimum risk-based capital requirements.

It would be appropriate to include comments on risk-based capital in the open section of the examination or inspection report when assessing the organization's capital adequacy. Banking organizations should be encouraged to establish as soon as possible capital levels and ratios that are consistent with their overall financial profiles. Examiner comments should address the adequacy of the banking organization's plans and progress toward meeting and maintaining the minimum capital ratios, according to the guidelines.

4060.3.4 DOCUMENTATION

Banking organizations are expected to have adequate systems in place to compute their risk-based capital ratios. Such systems should be sufficient to document the composition of the ratios for regulatory reporting and other supervisory purposes. Generally, supporting documentation will be expected to establish how banking organizations track and report their capital components and on- and off-balance-sheet items that are given preferential treatment. It may be necessary for examiners to reassign on- or off-balance-sheet items that are given a preferential risk weight to a weight of 100 percent, when supporting documentation is inadequate. Examiners are expected to verify that bank holding companies are correctly reporting the information requested on the holding companies' consolidated financial statements (FR Y-9C), which are used to compute the organization's risk-based capital ratios.

4060.3.5 SUPERVISORY CONSIDERATIONS FOR CALCULATING AND EVALUATING RISK-BASED CAPITAL

Examiners must consider certain requirements and factors when assessing the risk-based capital ratios and the overall capital adequacy of banking organizations. Analysis of these requirements and factors may have a material impact on the amount of capital banking organizations must hold to appropriately support certain activities for on- and off-balance-sheet items. The treatment of the following such activities must be used when assessing compliance with the guidelines and overall capital adequacy of banking organizations.

- *Certain capital-adjustment considerations:*
  - — investments and advances to unconsolidated banking and finance subsidiaries
  - — review and monitoring of goodwill and certain other intangible assets
  - — certain credit-enhancing interest-only strips (I/Os)
  - — reciprocal holdings of banking organizations' capital instruments
  - — deferred tax assets
  - — nonfinancial equity investments
- *Certain balance-sheet activity considerations:*
  - — investment in shares of a mutual fund
  - — mortgage-backed securities
  - — loans secured by first liens on one- to four-family residential properties
- *Certain off-balance-sheet activity considerations:*
  - — small-business loans and leases on personal property
  - — assets sold with recourse (FAS 140 sales)
  - — securities lent
  - — unused commitments
  - — financial and performance standby letters of credit
  - — avoidance of double-counting of interest-rate and exchange-rate contracts
  - — treatment of commodity and equity swaps
  - — netting of swaps and similar contracts
  - — assets sold with recourse
- *Considerations in the overall assessment of capital adequacy:*
  - — unrealized asset values
  - — terms of subordinated debt and intermediate-term preferred stock
  - — ineligible collateral and guarantees
  - — overall asset quality
  - — interest-only and principal-only strips
  - — interest-rate risk
  - — claims on, and claims guaranteed by, OECD central governments

If the terms and conditions of a particular instrument cause uncertainty as to how the instrument should be treated for capital purposes, it may be necessary to consult with Federal Reserve staff for a final determination. The Federal Reserve will, on a case-by-case basis, determine whether a capital instrument has characteristics that warrant its inclusion in tier 1 or tier 2 capital, as well as any quantitative limit on the amount of an instrument that will be counted as an element of tier 1 or tier 2 capital. In making this determination, the Federal Reserve will consider the similarity of the instrument to instruments explicitly treated in the guidelines, the ability of the instrument to absorb losses while the bank holding company operates as a going concern, the maturity and redemption features of the instrument, and other relevant terms and factors.

Redemptions of permanent equity or other capital instruments before their stated maturity could have a significant impact on a bank's overall capital structure. Consequently, a bank holding company considering such a step should consult with the Federal Reserve before redeeming any equity or debt capital instrument (before maturity) if its redemption could have a material effect on the level or composition of the organization's capital base.[11]

4060.3.5.1 Investments in and Advances to Unconsolidated Banking and Finance Subsidiaries and Other Subsidiaries

Generally, debt and equity capital investments and any other instruments deemed to be capital in unconsolidated banking and finance subsidiaries[12] are to be deducted from the consolidated capital of the banking organizations, regardless of whether the investment is made by a parent bank holding company or its direct or indirect subsidiaries.[13] Fifty percent of the investment is to be deducted from tier 1 capital and 50 percent from tier 2 capital. In cases where tier 2 capital is not sufficient to absorb the portion

11. Consultation would not ordinarily be necessary if an instrument were redeemed with the proceeds of, or replaced by, a like amount of a similar or higher-quality capital instrument and the organization's capital position is considered fully adequate by the Federal Reserve.

12. A banking and finance subsidiary generally is defined as any company engaged in banking or finance in which the parent institution directly or indirectly holds more than 50 percent of the outstanding voting stock, or which is otherwise controlled or capable of being controlled by the parent organization.

13. An exception to this deduction is to be made in the case of shares acquired in the regular course of securing or collecting a debt previously contracted in good faith.

(50 percent) of the investment allocated to it, the remainder (up to 100 percent) is to be deducted from tier 1 capital. In addition, capital investments in certain other subsidiaries that, while consolidated for accounting purposes, are not consolidated for certain supervisory or regulatory purposes, such as to facilitate functional regulation, are to be deducted from tier 1 and tier 2 capital of the banking organization in the same proportion as for unconsolidated banking and finance subsidiaries.

Advances to banking and finance subsidiaries (that is, loans, extensions of credit, guarantees, commitments, or any other credit exposures) not considered as capital are included in risk assets at the 100 percent risk weight (unless recognized collateral or guarantees dictate weighting at a lower percentage). However, such advances may be deducted from the parent banking organization's consolidated capital if the Federal Reserve finds that the risks associated with the advances are similar to the risks associated with capital investments, or if such advances possess risk factors that warrant an adjustment to capital for supervisory purposes. These risk factors could include the absence of collateral support or the clear intention of banking organizations to allow the advances, regardless of form, to serve as capital to subsidiaries.

The Board does not automatically deduct investments in other unconsolidated subsidiaries or investments in joint ventures and associated companies. Nonetheless, resources invested in these entities support assets that are not consolidated with the rest of the bank holding company and, therefore, may not be generally available to support additional leverage or absorb losses of affiliated institutions. Moreover, experience has shown that banking organizations often stand behind the losses of affiliated institutions in order to protect the reputation of the organization as a whole. In some cases, this support has led to losses that have exceeded the investments in these entities.

Accordingly, the level and nature of such investments should be closely monitored. For risk-based capital purposes, on a case-by-case basis, a bank holding company may be required to deduct such investments from total capital, to apply an appropriate risk-weighted capital charge against its pro rata share of the assets of the affiliated entity, to perform a required line-by-line consolidation of the entity, or to operate with a risk-based capital ratio above the minimum. In determining the appropriate capital treatment for such actions, the Board will generally take into account whether (1) the banking organization has significant influence over the financial or managerial policies or operations of the affiliated entity, (2) the banking organization is the largest investor in the entity, or (3) other circumstances prevail (such as the existence of significant guarantees from the bank holding company) that appear to closely tie the activities of the affiliated company to the banking organization.

4060.3.5.1.1 Review and Monitoring of Intangible Assets

For bank holding companies, tier 1 capital is generally defined as the sum of core capital elements less goodwill and other intangible assets required to be deducted in accordance with section II.B.1.b. of the risk-based measure of the capital adequacy guidelines for BHCs. Certain intangible assets *are not required to be deducted* from capital.

4060.3.5.1.1.1 Certain Assets That May Be Included in Capital

All servicing assets, including servicing assets on assets other than mortgages (that is, nonmortgage-servicing assets), are deemed identifiable intangible assets. The only types of identifiable intangible assets that may be included in, that is, not deducted from, an organization's capital are readily marketable mortgage-servicing assets, nonmortgage-servicing assets, purchased credit-card relationships (PCCRs), and credit-enhancing I/Os. The total amount of these assets that are included in capital, in the aggregate, cannot exceed 100 percent of tier 1 capital. Nonmortgage-servicing assets and purchased credit-card relationships are subject to a separate sublimit of 25 percent of tier 1 capital. The total amount of credit-enhancing I/Os (both purchased and retained) that may be included in capital cannot exceed 25 percent of tier 1 capital.[14] The total amount of credit-enhancing I/Os (both purchased and retained) that may be

14. Amounts of mortgage-servicing rights and purchased credit-card relationships in excess of these limitations, as well as all other identifiable intangible assets, including core deposit intangibles and favorable leaseholds, are to be deducted from an organization's core capital elements in determining tier 1 capital. Identifiable intangible assets, however, exclusive of mortgage-servicing assets and purchased credit-card relationships, acquired on or before February 19, 1992, generally *will not* be deducted from capital for supervisory purposes. They will, however, continue to be deducted for applications purposes.

included in capital cannot exceed 25 percent of tier 1 capital.

Purchased mortgage-servicing assets are identifiable intangible assets associated with the right to service mortgage loans. They usually arise when the rights are purchased from the entity that originated the mortgage loans. An organization that acquires purchased mortgage-servicing assets (PMSAs) has the obligation to collect principal and interest payments and escrow accounts from the mortgagor and to ensure that all amounts collected from the mortgagor are passed on to the appropriate parties. For performing these services, the servicer receives a fee, which is generally based on the remaining principal amount due on the mortgages being serviced.

Originated mortgage-servicing assets (OMSAs) generally represent the servicing rights acquired when an organization originates mortgage loans and subsequently sells the loans but retains the servicing rights. OMSAs are capitalized as balance-sheet assets in the same manner as PMSAs as a result of a Financial Accounting Standards Board decision, FAS 140, "Accounting for the Transfers and Servicing of Financial Assets and Extinguishments of Liabilities." FAS 140 requires the right to service mortgage loans for others to be separately recognized as a servicing asset or liability, however the rights were acquired. Servicing becomes a distinct asset or liability only when it is contractually separated from the underlying assets by sale or securitization of the assets with servicing retained or by separate purchase or assumption of the servicing. See section 3070.0.6 for information on, and accounting for, mortgage-servicing assets.

Purchased credit-card relationships are identifiable intangible assets associated with the right to provide future advances and other services to credit card holders and to provide correspondent-merchant processing under credit card arrangements that have been originated by, and purchased from, another entity. PCCRs usually arise when a credit card portfolio is bought, and the purchaser acquires the current advances outstanding under the credit card arrangements, which are tangible assets, as well as the right to provide future services to the cardholders, which is an intangible asset. The value of PCCRs is derived from the anticipated profit the purchaser will earn from interest on future advances and from fees charged for other future credit card–related services, after covering expenses and other operating costs such as credit losses.

When calculating the limitations on mortgage-servicing assets, nonmortgage-servicing assets, purchased credit-card relationships, and credit-enhancing I/Os, the definition of tier 1 capital will be the sum of core capital elements, net of goodwill and net of all identifiable intangible assets and similar assets other than mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships, regardless of when they were acquired. (This calculation of tier 1 is before the deduction of any disallowed mortgage-servicing assets, any disallowed nonmortgage-servicing assets, any disallowed purchased credit-card relationships, any disallowed credit-enhancing I/Os (purchased or retained), and any disallowed deferred tax assets.)

4060.3.5.1.1.2 Valuation Review

Bank holding companies must review the book value of all intangible assets at least quarterly and make adjustments to these values as necessary. The fair market values of all intangible assets, nonmortgage-servicing assets, purchased credit-card relationships, and credit-enhancing I/Os also must be determined at least quarterly. This determination is to include adjustments for any significant changes made to the original valuation assumptions, including changes in prepayment estimates or account-attrition rates.

Examiners will review both the book value and the fair market value assigned to these assets, together with supporting documentation, during the inspection process. In addition, the Federal Reserve may require, on a case-by-case basis, an independent valuation of a BHC's intangible assets and credit-enhancing I/Os.

4060.3.5.1.1.3 Fair-Value and Book-Value Limits

The amount of mortgage-servicing rights, nonmortgage-servicing assets, and purchased credit-card relationships that a bank holding company may include in capital is limited to the lesser of 90 percent of their fair value (as determined according to the guidance herein), or 100 percent of their book value, as adjusted for capital purposes in accordance with the instructions to the Consolidated Financial Statements for Bank Holding Companies (FR Y-9C Report). If both the application of the limits on mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships and the adjustment of the balance-sheet amount for these assets would result in an amount being deducted from capital, the BHC would deduct only the greater of the two amounts from its core capital elements in determining tier 1 capital.

The amount of credit-enhancing interest-only strips (I/Os) that a bank holding company may include in capital is their fair value. Such I/Os are on-balance-sheet assets that, in form or substance, represent the contractual right to receive some or all of the interest due on transferred assets. I/Os expose the bank holding company to credit risk directly or indirectly associated with transferred assets that exceeds a pro rata share of the bank holding company's claim on the assets, whether through subordination provisions or other credit-enhancement techniques. Such I/Os, whether purchased or retained, and including other similar "spread" assets, may be included in, that is, not deducted from, a bank holding company's capital subject to the fair value and tier 1 limitations. Both purchased and retained credit-enhancing I/Os, on a non-tax-adjusted basis, are included in the total amount that is used for purposes of determining whether a bank holding company exceeds the tier 1 limitation. In determining whether an I/O or other types of spread assets serve as a credit enhancement, the Federal Reserve will look to the economic substance of the transaction.

Bank holding companies may elect to deduct disallowed mortgage-servicing assets, any disallowed nonmortgage-servicing assets, and any disallowed credit-enhancing I/Os (purchased and retained) on a basis that is net of any associated deferred tax liability. Deferred tax liabilities netted in this manner cannot also be netted against deferred tax assets when determining the amount of deferred tax assets that are dependent upon future taxable income.

4060.3.5.1.1.4 Growing Organizations

Banking organizations experiencing substantial growth, whether internally or by acquisition, are expected to maintain strong capital positions substantially above minimum supervisory levels, without significant reliance on intangible assets or credit-enhancing I/Os.

4060.3.5.1.1.5 Examiners' Review of Intangibles

During on-site examinations and inspections, examiners are to review the evidence of title to and the accounting for intangible assets, including their respective amortization schedules and supporting documentation. Carrying values of intangible assets and fair market values assigned to these assets that are overstated or not adequately supported with documentation on how the carrying values were originated, amortized, or adjusted should be excluded from banking organizations' risk-based capital calculations. Intangible assets in excess of 25 percent of tier 1 capital should be closely scrutinized along with any unusual items and, if supervisory concerns warrant, deducted from tier 1 capital. An arrangement whereby a bank holding company enters into a licensing or leasing agreement or similar transaction to avoid booking an intangible asset should be subject to particularly close scrutiny. Normally, such arrangements will be dealt with by adjusting the bank holding company's capital calculation in an appropriate manner. In making their evaluation of intangible assets, examiners are to consider a number of factors, including—

1. the reliability and predictability of any cash flows associated with the asset and the degree of certainty that can be achieved in periodically determining the asset's useful life and value,
2. the existence of an active and liquid market for the asset, and
3. the feasibility of selling the asset apart from the banking organization or from the bulk of its assets.

Intangible rights that have been allowed to lapse or that are no longer used should be recommended for authorized write-off. Examiners should review intangible assets, such as mortgage-servicing rights, nonmortgage-servicing rights (for example, core deposit intangibles and leaseholds), and purchased credit-card relationships, and determine that the organization properly monitors their level and quality.

4060.3.5.1.2 Reciprocal Holdings of Banking Organizations' Capital Instruments

Reciprocal holdings (intentional cross-holdings) of banking organizations' capital instruments are to be deducted from the total capital of an organization for the purpose of determining the total risk-based capital ratio. Reciprocal holdings are cross-holdings resulting from formal or informal arrangements between banking organizations to swap or exchange each other's capital instruments. Deductions of holdings of capital securities also would not be made in the case of interstate ''stake-out'' investments that comply with the Board's policy statement on nonvoting equity investments (12 C.F.R. 225.143). In addition, holdings of capital instruments issued by other banking organizations but taken in satisfaction of debts previously contracted would be exempt from any deduction from capital.

4060.3.5.1.3 Limit on Deferred Tax Assets

The amount of deferred tax assets that are dependent on future taxable income, net of the valuation allowance for deferred tax assets, that may be included in, that is, not deducted from, a bank holding company's capital may not exceed the lesser of—

1. the amount of these deferred tax assets that the bank holding company is expected to realize within one year of the calendar quarter–end, based on the projections of future taxable income for that year,[15] or
2. 10 percent of tier 1 capital.

The reported amount of deferred tax assets, net of any valuation allowance for deferred tax assets, in excess of the lesser of these two amounts is to be deducted from a banking organization's core capital elements in determining tier 1 capital. For purposes of calculating the 10 percent limitation, tier 1 capital is defined as the sum of the core capital elements, net of goodwill and net of all identifiable intangible assets other than mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships, before the deduction of any disallowed mortgage-servicing assets, any disallowed nonmortgage-servicing assets, any disallowed purchased credit-card relationships, any disallowed credit-enhancing I/Os, any disallowed deferred tax assets, and any nonfinancial equity investments. There generally is no limit in tier 1 capital on the amount of deferred tax assets that can be realized from taxes paid in prior carry-back years and from future reversals of existing taxable temporary differences.

4060.3.5.1.4 Nonfinancial Equity Investments

A bank holding company must deduct from its core capital elements the sum of the appropriate percentages (as determined below) of the adjusted carrying value of all nonfinancial equity investments held by the parent bank holding company or by its direct or indirect subsidiaries. Investments held by a bank holding company include all investments held directly or indirectly by the bank holding company or any of its subsidiaries. The adjusted carrying value of investments is the aggregate value at which the investments are carried on the balance sheet of the consolidated bank holding company reduced by any unrealized gains on those investments that are reflected in such carrying value but excluded from the bank holding company's tier 1 capital and associated deferred tax liabilities. For example, for investments held as available-for-sale (AFS), the adjusted carrying value of the investments would be the aggregate carrying value of the investments (as reflected on the consolidated balance sheet of the bank holding company) *less* any unrealized gains on those investments that are included in other comprehensive income and not reflected in tier 1 capital, and associated deferred tax liabilities.[16]

A nonfinancial equity investment, subject to the risk-based capital rule (the rule), is any equity investment held by the bank holding company (1) under the merchant banking authority of section 4(k)(4)(H) of the Bank Holding Company Act (the BHC Act) and subpart J of the Board's Regulation Y (12 C.F.R. 225.175 et seq.); (2) under section 4(c)(6) or 4(c)(7) of the BHC Act in a nonfinancial company or in a company that makes investments in nonfinancial companies; (3) in a nonfinancial company through a small business investment company (SBIC) under section 302(b) of the Small Busi-

15. To determine the amount of expected deferred tax assets realizable in the next 12 months, a banking organization should assume that all existing temporary differences fully reverse as of the report date. Projected future taxable income should not include net operating loss carry-forwards to be used during that year or the amount of existing temporary differences a bank holding company expects to reverse within the year. Such projections should include the estimated effect of tax-planning strategies that the organization expects to implement to realize net operating losses or tax-credit carry-forwards that would otherwise expire during the year. A new 12-month projection does not have to be prepared each quarter. Rather, on interim report dates, banking organizations may use the future-taxable-income projections for their current fiscal year, adjusted for any significant changes that have occurred or are expected to occur.

16. Unrealized gains on AFS investments may be included in supplementary capital to the extent permitted by the risk-based capital guidelines. In addition, the unrealized losses on AFS equity investments are deducted from tier 1 capital.

ness Investment Act of 1958;[17] (4) in a nonfinancial company under the portfolio investment provisions of the Board's Regulation K (12 C.F.R. 211.8(c)(3)); or (5) in a nonfinancial company under section 24 of the Federal Deposit Insurance Act (other than section 24(f)).[18]

17. An equity investment made under section 302(b) of the Small Business Investment Act of 1958 in an SBIC that is not consolidated with the parent banking organization is treated as a nonfinancial equity investment.

18. See 12 U.S.C. 1843(c)(6), (c)(7), and (k)(4)(H); 15 U.S.C. 682(b); 12 C.F.R. 211.5(b)(1)(iii); and 12 U.S.C. 1831a. In a case in which the board of directors of the FDIC, acting directly in exceptional cases and after a review of the proposed activity, has permitted a lesser capital deduction for an investment approved by the board of directors under section 24 of the Federal Deposit Insurance Act, such deduction shall also apply to the consolidated bank holding company capital calculation so long as the bank's investments under section 24 and SBIC investments represent, in the aggregate, less than 15 percent of the tier 1 capital of the bank.

A nonfinancial company is an entity that engages in any activity that has not been determined to be financial in nature or incidental to financial activities under section 4(k) of the Bank Holding Company Act (12 U.S.C. 1843(k)).

The bank holding company must deduct from its core capital elements the sum of the appropriate percentages, as stated in table 1, of the adjusted carrying value of all nonfinancial equity investments held by the bank holding company. The amount of the percentage deduction increases as the aggregate amount of nonfinancial equity investments held by the bank holding company increases as a percentage of the bank holding company's tier 1 capital.

Table 1—Deduction for Nonfinancial Equity Investments

Aggregate adjusted carrying value of all nonfinancial equity investments held directly or indirectly by the bank holding company (as a percentage of the tier 1 capital of the parent banking organization)[1]	*Deduction from core capital elements (as a percentage of the adjusted carrying value of the investment)*
Less than 15 percent	8 percent
15 percent to 24.99 percent	12 percent
25 percent and above	25 percent

1. For purposes of calculating the adjusted carrying value of nonfinancial equity investments as a percentage of tier 1 capital, tier 1 capital is defined as the sum of core capital elements net of goodwill and net of all identifiable intangible assets other than MSAs, NMSAs, and PCCRs, but before the deduction for any disallowed MSAs, any disallowed NMSAs, any disallowed PCCRs, any disallowed credit-enhancing I/Os (both purchased and retained), any disallowed deferred tax assets, and any nonfinancial equity investments.

These deductions are applied on a marginal basis to the portions of the adjusted carrying value of nonfinancial equity investments that fall within the specified ranges of the parent holding company's tier 1 capital. For example, if the adjusted carrying value of all nonfinancial equity investments held by a bank holding company equals 20 percent of the tier 1 capital of the bank holding company, then the amount of the deduction would be 8 percent of the adjusted carrying value of all investments up to 15 percent of the company's tier 1 capital, and 12 percent of the adjusted carrying value of all investments in excess of 15 percent of the company's tier 1 capital. The total adjusted carrying value of any nonfinancial equity investment that is subject to deduction is excluded from the bank holding company's risk-weighted assets for purposes of computing the denominator of the company's risk-based capital ratio.[19]

The rule establishes minimum risk-based capital ratios, and banking organizations are at all times expected to maintain capital commensurate with the level and nature of the risks to which they are exposed. The risk to a banking organization from nonfinancial equity investments increases with its concentration in such investments, and strong capital levels above the minimum requirements are particularly important when a banking organization has a high degree of concentration in nonfinancial equity

19. For example, if 8 percent of the adjusted carrying value of a nonfinancial equity investment is deducted from tier 1 capital, the entire adjusted carrying value of the investment will be excluded from risk-weighted assets in calculating the denominator for the risk-based capital ratio.

investments (for example, in excess of 50 percent of tier 1 capital).

The Federal Reserve intends to monitor banking organizations and apply heightened supervision to equity investment activities as appropriate, including where the banking organization has a high degree of concentration in nonfinancial equity investments, to ensure that each organization maintains capital levels that are appropriate in light of its equity investment activities. The Federal Reserve also reserves authority to impose a higher capital charge in any case where the circumstances, such as the level of risk of the particular investment or portfolio of investments, the risk-management systems of the banking organization, or other information, indicate that a higher minimum capital requirement is appropriate.

4060.3.5.1.4.1 SBIC Investments

No deduction is required for nonfinancial equity investments that are held by a bank holding company through one or more SBICs that are consolidated with the bank holding company or in one or more SBICs that are not consolidated with the bank holding company to the extent that all such investments, in the aggregate, do not exceed 15 percent of the aggregate of the bank holding company's pro rata interests in the tier 1 capital of its subsidiary banks. Any nonfinancial equity investment that is held through or in an SBIC and not required to be deducted from tier 1 capital will be assigned a 100 percent risk weight and included in the parent holding company's consolidated risk-weighted assets.[20]

To the extent the adjusted carrying value of all nonfinancial equity investments that a bank holding company holds through one or more SBICs that are consolidated with the bank holding company or in one or more SBICs that are not consolidated with the bank holding company exceeds, in the aggregate, 15 percent of the aggregate tier 1 capital of the company's subsidiary banks, the appropriate percentage of such amounts (as set forth in table 1) must be deducted from the bank holding company's core capital elements. In addition, the aggregate adjusted carrying value of *all* nonfinancial equity investments held through a consolidated SBIC and in a nonconsolidated SBIC (including any investments for which no deduction is required) must be included in determining, for purposes of table 1, the total amount of nonfinancial equity investments held by the bank holding company in relation to its tier 1 capital.

No deduction is required to be made with respect to the adjusted carrying value of any nonfinancial equity investment (or portion of such an investment) that was made by the bank holding company before March 13, 2000, or that was made after such date pursuant to a binding written commitment[21] entered into by the bank holding company before March 13, 2000, provided that in either case the bank holding company has continuously held the investment since the relevant investment date.[22] A nonfinancial equity investment made before March 13, 2000, includes any shares or other interests received by the bank holding company

20. If a bank holding company has an investment in an SBIC that is consolidated for accounting purposes but that is not wholly owned by the bank holding company, the adjusted carrying value of the bank holding company's nonfinancial equity investments through the SBIC is equal to the holding company's proportionate share of the adjusted carrying value of the SBIC's equity investments in nonfinancial companies. The remainder of the SBIC's adjusted carrying value (that is, the minority interest holders' proportionate share) is excluded from the risk-weighted assets of the bank holding company. If a bank holding company has an investment in an SBIC that is not consolidated for accounting purposes and has current information that identifies the percentage of the SBIC's assets that are equity investments in nonfinancial companies, the bank holding company may reduce the adjusted carrying value of its investment in the SBIC proportionately to reflect the percentage of the adjusted carrying value of the SBIC's assets that are not equity investments in nonfinancial companies. If a bank holding company reduces the adjusted carrying value of its investment in a nonconsolidated SBIC to reflect financial investments of the SBIC, the amount of the adjustment will be risk weighted at 100 percent and included in the bank's risk-weighted assets.

21. A "binding written commitment" means a legally binding written agreement that requires the banking organization to acquire shares or other equity of the company, or make a capital contribution to the company, under terms and conditions set forth in the agreement. Options, warrants, and other agreements that give a banking organization the right to acquire equity or make an investment, but do not require the banking organization to take such actions, are not considered a binding written commitment.

22. For example, if a bank holding company made an equity investment in 100 shares of a nonfinancial company before March 13, 2000, that investment would not be subject to a deduction. However, if the bank holding company made any additional equity investment in the company after March 13, 2000, such as by purchasing additional shares of the company (including through the exercise of options or warrants acquired before or after March 13, 2000) or by making a capital contribution to the company, and such investment was not made pursuant to a binding written commitment entered into before March 13, 2000, the adjusted carrying value of the additional investment would be subject to a deduction. In addition, if the bank holding company sold and repurchased shares of the company after March 13, 2000, the adjusted carrying value of the reacquired shares would be subject to a deduction.

through a stock split or stock dividend on an investment made before March 13, 2000, provided the bank holding company provides no consideration for the shares or interests received and the transaction does not materially increase the bank holding company's proportional interest in the company. The exercise on or after March 13, 2000, of options or warrants acquired before March 13, 2000, is *not* considered to be an investment made before March 13, 2000, if the bank holding company provides any consideration for the shares or interests received upon exercise of the options or warrants. Any nonfinancial equity investment (or portion thereof) that is not required to be deducted from tier 1 capital must be included in determining the total amount of nonfinancial equity investments held by the bank holding company in relation to its tier 1 capital for purposes of table 1. In addition, any nonfinancial equity investment (or portion thereof) that is not required to be deducted from tier 1 capital will be assigned a 100 percent risk weight and included in the bank holding company's consolidated risk-weighted assets.

As discussed above for consolidated SBICs, some equity investments may be in companies that are consolidated for accounting purposes. For investments in a nonfinancial company that is consolidated for accounting purposes under generally accepted accounting principles, the parent banking organization's adjusted carrying value of the investment is determined under the equity method of accounting (net of any intangibles associated with the investment that are deducted from the consolidated bank holding company's core captial). Even though the assets of the nonfinancial company are consolidated for accounting purposes, these assets (as well as the credit-equivalent amounts of the company's off-balance-sheet items) should be excluded from the banking organization's risk-weighted assets for regulatory capital purposes.

4060.3.5.1.4.2 Equity Investments

The term "equity investment" means any equity instrument (including common stock, preferred stock, partnership interests, interests in limited-liability companies, trust certificates, and warrants and call options that give the holder the right to purchase an equity instrument), any equity feature of a debt instrument (such as a warrant or call option), and any debt instrument that is convertible into equity. An investment in any other instrument (including subordinated debt) may be treated as an equity investment if, in the judgment of the Federal Reserve, the instrument is the functional equivalent of equity or exposes the banking organization to essentially the same risks as an equity instrument.

4060.3.5.1.5 Revaluation Reserves

Revaluation reserves reflect the formal balance-sheet restatement or revaluation for capital purposes of asset carrying values to reflect the current market values. The Federal Reserve generally has not included unrealized asset appreciation in capital-ratio calculations, although it has long taken such values into account as a separate factor in assessing the overall financial strength of a banking organization.

Consistent with long-standing supervisory practice, the excess of market values over book values for assets held by bank holding companies will generally not be recognized in supplementary capital or in the calculation of the risk-based capital ratio. However, all bank holding companies are encouraged to disclose their equivalent of premises (building) and security-revaluation reserves. The Federal Reserve will consider any appreciation, as well as any depreciation, in specific asset values as additional considerations in assessing overall capital strength and financial condition.

4060.3.5.2 Certain Balance-Sheet-Activity Considerations

4060.3.5.2.1 Investment in Shares of a Mutual Fund

An exception to the general rule exists for an investment in shares of a fund that invests in various securities or money market instruments that are eligible to be assigned to different risk categories. In this case, the total investment would generally be assigned to the risk category appropriate to the highest risk-weighted asset the fund may hold, in accordance with the stated limits set forth in the prospectus. Bank holding companies have the option of assigning the investment on a pro rata basis to different risk categories according to the investment limits in the fund's prospectus. Regardless of the risk-weighting method used, the total risk weight of a mutual fund must not be less than 20 percent. If the bank holding company chooses to assign a fund investment on a pro rata basis, and the sum of the investment limits for all asset categories, as described in the fund's prospectus, exceeds 100 percent, it must assign risk weights in descending order *based on the assumption that the fund invests the largest possible percentage of its assets in the highest risk-weighted categories.*[23] If, in order to maintain a necessary degree of short-term liquidity, a fund is permitted to hold an insignificant amount of its assets in short-term, highly liquid securities of superior credit quality that do not qualify for a preferential risk weight, then those securities may be disregarded in determining the fund's risk weight.

The prudent use of hedging instruments by a fund to reduce the risk of its assets will not increase the risk weighting of the fund investment. For example, the use of hedging instruments by a fund to reduce the interest-rate risk of its government bond portfolio will not increase the risk weight of that fund above the 20 percent category. Nonetheless, if a fund engages in any activities that appear speculative in nature or the fund has any other characteristics that are inconsistent with the preferential risk weighting assigned to the fund's assets, holdings in the fund will be assigned to the 100 percent risk-weight category.

4060.3.5.2.2 Loans Secured by First Liens on One- to Four-Family Residential Properties or Multifamily Residential Properties

Qualifying one- to four-family residential properties, either owner-occupied or rented, or multifamily residential properties (as listed in the instructions to the bank holding company FR Y-9C Report), are accorded preferential risk-weighting treatment under the guidelines. These loans include loans to builders with substantial project equity for the construction of one- to four-family residential properties that have been presold under firm contracts to purchasers who have obtained firm commitments for permanent qualifying mortgage loans and have made substantial earnest-money deposits.[24] Effective with an April 1, 1999, amendment, such loans to builders will be considered prudently underwritten only if the bank holding company has obtained sufficient documentation that the buyer of the home intends to purchase the home (that is, has a legally binding written sales contract). The buyer must have the ability to obtain a mortgage sufficient to purchase the home (that is, has a firm written commitment for permanent financing of the home upon completion).

To ensure that only qualifying residential mortgage loans are assigned to the 50 percent risk-weight category, examiners are to review the real estate loans that are included in that category. Such loans are not eligible for preferential treatment unless the loans are made subject to prudent credit-underwriting standards; the loan-to-value ratios are conservative;[25] the loan-to-value ratios[26] are based on the most current appraisal or evaluation[27] of the properties, with such appraisal or evaluation conforming to both the Board's real estate appraisal regulations and guidelines and the banking organization's internal appraisal guidelines; and the loans are performing in accordance with their original terms and are not 90 days or more past due or carried in nonaccrual status. Where examiners find that some residential mortgage loans do not meet all the specified criteria or are made for the purpose of speculative real estate development, such loans should be assigned to

23. For example, assume that a fund's prospectus permits up to 30 percent of the fund's assets to be invested in 100 percent risk-weighted assets, up to 40 percent of the fund's assets to be invested in 50 percent risk-weighted assets, and up to 60 percent of the fund's assets to be invested in 20 percent risk-weighted assets. In such a case, the bank holding company must assign 30 percent of the total investment to the 100 percent risk category, 40 percent to the 50 percent risk category, and 30 percent to the 20 percent risk category. It may not minimize its capital requirement by assigning 60 percent of the total investment to the 20 percent risk category and 40 percent to the 50 percent risk category.

24. An amendment, effective December 29, 1992, lowered from 100 percent to 50 percent the risk weight on loans to finance the construction of one- to four-family residences that have been presold.

25. Prudent underwriting standards dictate that a loan-to-value ratio used in the case of originating a loan to acquire a property would not be deemed conservative unless the value is based on the lower of the acquisition cost of the property or the appraised (or, if appropriate, evaluated) value. Otherwise, the loan-to-value ratio generally would be based on the value of the property as determined by the most current appraisal or, if appropriate, the most current evaluation. All appraisals and evaluations must be made in a manner consistent with the federal banking agencies' real estate appraisal regulations and guidelines and with the banking organization's own appraisal guidelines.

26. If a banking organization holds the first and junior lien(s) on a residential property and no other party holds an intervening lien, the transaction is treated as a single loan secured by a first lien for the purposes of determining the loan-to-value ratio and assigning a risk weight.

27. Appraisals made at the inception of one- to four-family residential property loans are to be used in calculating loan-to-value ratios. Subsequent appraisals showing increased property values may be used to support higher loan-to-value ratios. However, to avoid penalizing banking organizations doing business in markets with declining real estate values, appraisals of residential properties as conducted at inception are to be used in calculating loan-to-value ratios, even though more current appraisals showing decreases in values are available.

the 100 percent risk-weight category in accordance with the guidelines.

Examiners should keep in mind that loans secured by multifamily residential property must meet additional criteria to be included in the 50 percent risk-weight category. These include the requirement that all principal and interest payments on the loan must have been made on time for at least the year preceding the placement of the loan in this risk-weight category. If the existing property owner is refinancing a loan on that property, all principal and interest payments on the loan being refinanced must have been made on time for at least the year preceding placement in this risk-weight category. In addition, amortization of the principal and interest must occur over a period of not more than 30 years, and the minimum original maturity for repayment of principal must not be less than seven years. Also, the annual net operating income (before debt service) generated by the property during its most recent fiscal year must not be less than 120 percent of the loan's current annual debt service (115 percent if the loan is based on a floating interest rate), or, in the case of a cooperative or other not-for-profit housing project, the property must generate sufficient cash flow to provide comparable protection to the institution.

If examiners find material evidence of residential mortgage loans having questionable eligibility for preferential risk-weighting, but cannot readily identify the amounts that were inappropriately weighted, the overall evaluation of the banking organization's capital adequacy should reflect a higher capital requirement than otherwise would be the case.

4060.3.5.3 Certain Off-Balance-Sheet Activity Considerations

Off-balance-sheet transactions include recourse obligations and direct-credit substitutes. The treatment for direct-credit substitutes, assets transferred with recourse, and securities issued in connection with asset securitizations and structured financings is described below. The terms "asset securitizations" or "securitizations," as used in this subsection, include structured financings as well as asset-securitization transactions.

4060.3.5.3.1 Assets Sold with Recourse

For risk-based capital adequacy purposes, recourse means the retention, by a bank holding company, in form or in substance, of any credit risk directly or indirectly associated with an asset it has transferred and sold that exceeds a pro rata share of the banking organization's claim on the asset. If a banking organization has no claim on a transferred asset, then the retention of any risk of credit loss is recourse. A recourse obligation typically arises when a bank holding company transfers assets and retains an explicit obligation to repurchase the assets or absorb losses due to a default on the payment of principal or interest or any other deficiency in the performance of the underlying obligor or some other party. Recourse may also exist implicitly if a bank holding company provides credit enhancement beyond any contractual obligation to support assets it has sold. The following are examples of recourse arrangements:

1. credit-enhancing representations and warranties made on the transferred assets
2. loan-servicing assets retained pursuant to an agreement under which the bank holding company will be responsible for credit losses associated with the loans being serviced (Mortgage-servicer cash advances that meet the conditions of section III.B.3.a.viii. of the guidelines (12 C.F.R. 225, appendix A) are not recourse arrangements.)
3. retained subordinated interests that absorb more than their pro rata share of losses from the underlying assets
4. assets sold under an agreement to repurchase, if the assets are not already included on the balance sheet
5. loan strips sold without contractual recourse, when the maturity of the transferred loan is shorter than the maturity of the commitment under which the loan is drawn
6. credit derivatives issued that absorb more than the bank holding company's pro rata share of losses from the transferred assets
7. clean-up calls that are greater than 10 percent of the balance of the original pool of transferred loans or of the outstanding principal amount of securities (Clean-up calls that are 10 percent or less of the original pool balance or of the outstanding principal amount of securities are not recourse arrangements.)

To qualify as an asset sale with recourse, a transfer of assets must first qualify as a sale according to the GAAP criteria set forth in paragraph 14 of the Financial Accounting Standards Board's Statement No. 140 (FAS 140), ''Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities.'' If a transfer of assets does not meet these criteria, the assets must remain on the bank holding company's balance sheet and thus they are subject to the appropriate risk-based capital charge.

If a transfer of assets qualifies as a sale under GAAP, but the bank holding company retains any risk of loss or obligation for payment of principal or interest, then the transfer is considered to be a sale with recourse. A more detailed definition of an asset sale with recourse may be found in the ''Summary Description of the Risk-Based Capital Treatment of Recourse Arrangements'' in the glossary to the Consolidated Financial Statements for Bank Holding Companies, the FR Y-9C Report instructions. Although the assets are removed from a bank holding company's balance sheet in an asset sale with recourse, the credit-equivalent amount is assigned to the risk category appropriate to the obligor in the underlying transaction, after considering any associated guaranties or nature of the collateral. This assignment also applies when the contractual terms of the recourse agreement limit the seller's risk to a percentage of the value of the assets sold or to a specific dollar amount.

If, however, the risk retained by the seller is limited to some fixed percentage of any losses that might be incurred and there are no other provisions resulting in the direct or indirect retention of risk by the seller, the maximum amount of possible loss for which the selling bank holding company is at risk (the stated percentage times the amount of assets to which the percentage applies) is subject to risk-based capital requirements. The remaining amount of assets transferred would be treated as a sale that is not subject to the risk-based capital requirements. For example, a seller would treat a sale of $1 million in assets with a recourse provision that the seller and buyer proportionately share in losses incurred on a 10 percent and 90 percent basis, respectively, and with no other retention of risk by the seller, as a $100,000 asset sale with recourse and a $900,000 sale not subject to risk-based capital requirements.

There are exceptions to this general reporting rule for recourse transactions. The first exception applies to recourse transactions for which the amount of recourse the bank holding company is contractually liable for is less than the capital requirement for the assets transferred under the recourse agreement. For such transactions, a bank holding company must hold capital equal to its maximum contractual recourse obligation. For example, assume that a bank holding company transfers a $100 pool of commercial loans and retains a recourse obligation of 2 percent. Ordinarily, it would be subject to an 8 percent capital charge, or $8. Because the recourse obligation is only 2 percent, however, the bank holding company would be required to hold capital of $2 against the recourse exposure. This capital charge may be reduced further by the balance of any associated noncapital GAAP recourse liability account.

A second exception to the general rule applies to the transfer of small-business loans and the transfer of leases on personal property with recourse. A bank holding company should include in risk-weighted assets only the amount of retained recourse—instead of the entire amount of assets transferred—in connection with a transfer of small-business loans or a transfer of leases on personal property with recourse, provided two conditions are met. First, the transaction must be treated as a sale under GAAP; second, the bank holding company must establish a non-capital reserve that is sufficient to cover its estimated liability under the recourse arrangement. The total outstanding amount of recourse retained under such transactions may not exceed 15 percent of a BHC's total risk-based capital without Board approval.

4060.3.5.3.2 Definitions

The capital adequacy guidelines provide special treatment for recourse obligations, direct-credit substitutes, residual interests, and asset- and mortgage-backed securities involved in asset-securitization activities. A brief discussion of some of the other primary definitions follows.

4060.3.5.3.2.1 Direct-Credit Substitutes

The term ''direct-credit substitute'' refers to an arrangement in which a bank holding company assumes, in form or in substance, credit risk associated with an on- or off-balance-sheet asset or exposure that was not previously owned by the bank holding company (third-party asset), and the risk assumed by the bank holding company exceeds the pro rata share of its interest in the third-party asset. If the bank holding company has no claim on the third-party asset, then the bank holding company's assumption of any credit risk on the third-party asset is a direct-credit substitute.

The term direct-credit substitute explicitly includes items such as purchased subordinated interests, agreements to cover credit losses that arise from purchased loan-servicing rights, credit derivatives, and lines of credit that provide credit enhancement. Some purchased subordinated interests, such as credit-enhancing I/O strips, are also residual interests for regulatory capital purposes.

Direct-credit substitutes include, but are not limited to—

1. financial standby letters of credit that support financial claims on a third party that exceed a bank holding company's pro rata share of losses in the financial claim;
2. guarantees, surety arrangements, credit derivatives, and similar instruments backing financial claims that exceed a bank holding company's pro rata share in the financial claim;
3. purchased subordinated interests or securities that absorb more than their pro rata share of losses from the underlying assets;
4. credit-derivative contracts under which the bank holding company assumes more than its pro rata share of credit risk on a third-party exposure;
5. loans or lines of credit that provide credit enhancement for the financial obligations of an account party;
6. purchased loan-servicing assets if the servicer is responsible for credit losses or if the servicer makes or assumes credit-enhancing representations and warranties with respect to the loans serviced (mortgage-servicer cash advances that meet the conditions of section III.B.3.a.viii. of the guidelines (12 C.F.R. 225, appendix A) are not direct-credit substitutes); and
7. clean-up calls on third-party assets (clean-up calls that are 10 percent or less of the original pool balance or outstanding principal amount of securities and that are exercisable at the option of the bank holding company are not direct-credit substitutes).

4060.3.5.3.2.2 Residual Interests

Residual interests are defined as any on-balance-sheet asset (1) that represents an interest (including a beneficial interest) created by a transfer that qualifies as a sale (in accordance with GAAP) of financial assets, whether through a securitization or otherwise, and (2) that exposes the bank holding company to any credit risk directly or indirectly associated with the transferred assets that exceeds a pro rata share of the bank holding company's claim on the asset, whether through subordination provisions or other credit-enhancement techniques. Examples of residual interests (assets) include credit-enhancing I/O strips receivables; spread accounts; cash-collateral accounts; retained subordinated interests; accrued but uncollected interest on transferred assets that, when collected, will be available to serve in a credit-enhancing capacity; other forms of overcollateralization; and similar on-balance-sheet assets that function as a credit enhancement. The functional-based definition reflects the fact that securitization structures vary in the way they use certain assets as credit enhancements. Residual interests therefore include any retained on-balance-sheet asset that functions as a credit enhancement in a securitization, regardless of how a bank holding company refers to the asset in financial or regulatory reports. In addition, due to their similar risk profile, purchased credit-enhancing I/O strips are residual interests for regulatory capital purposes. Residual interests generally do not include interests purchased from a third party, except for credit-enhancing I/O strips.

In general, the definition of residual interests includes only an on-balance-sheet asset that represents an interest created by a transfer of financial assets treated as a sale under GAAP, in accordance with FAS 140. Interests retained in a securitization or transfer of assets accounted for as a financing under GAAP are generally excluded from the definition of residual interest. In the case of GAAP financings, the transferred assets remain on the transferring bank holding company's balance sheet and are, therefore, directly included in both the leverage and risk-based capital calculations. Further, when a transaction is treated as a financing, no gain is recognized from an accounting standpoint.

Sellers' interests generally do not function as a credit enhancement. Thus, if a seller's interest shares losses on a pro rata basis with investors, such an interest would not be considered a residual interest. However, bank holding companies should recognize that sellers' interests that are structured to absorb a disproportionate share of losses will be considered residual interests.

The definition of residual interest also includes overcollateralization and spread accounts because these accounts are susceptible to the potential future credit losses within the loan pools that they support, and thus are subject to valuation inaccuracies. Spread accounts and overcollateralizations that do not meet the definition of credit-enhancing I/O strips generally do not expose a bank holding company to the same level of risk as credit-enhancing I/O strips, and thus are excluded from the concentration limit.

The capital treatment for a residual interest applies when a bank holding company effectively retains the risk associated with that residual interest, even if the residual is sold. The economic substance of the transaction will be used to determine whether the bank holding company has transferred the risk associated with the residual-interest exposure. Bank holding companies that transfer the risk on residual interests, either directly through a sale or indirectly through guarantees or other credit-risk-mitigation techniques, and then reassume this risk in any form will be required to hold risk-based capital as though the residual interest remained on its books. For example, if a bank holding company sells an asset that is an on-balance-sheet credit enhancement to a third party and then writes a credit derivative to cover the credit risk associated with that asset, the selling bank holding company must continue to risk-weight, and hold capital against, that asset as a residual interest as if the asset had not been sold.

4060.3.5.3.2.3 Spread Accounts That Function as Credit-Enhancing Interest-Only Strips

A spread account is an on-balance-sheet asset that functions as a credit enhancement and that can represent an interest in expected interest and fee cash flows derived from assets an organization has sold into a securitization. In those cases, the spread account is considered to be a "credit-enhancing interest-only strip" and is subject to the concentration limit. (See SR-02-16.) However, any portion of a spread account that represents an interest in cash that has already been collected and is held by the trustee is a "residual interest" subject to dollar-for-dollar capital, but it is not a credit-enhancing interest-only strip subject to the concentration limit. For example, assume that a bank holding company books a single spread-account asset that is derived from two separate cash-flow streams:

1. *A receivable from the securitization trust that represents cash that has already accumulated in the spread account.* In accordance with the securitization documents, the cash will be returned to the bank holding company at some date in the future after having been reduced by amounts used to reimburse investors for credit losses. Based on the date when the cash is expected to be paid out to the bank holding company, the present value of this asset is currently estimated to be $3.
2. *A projection of future cash flows that are expected to accumulate in the spread account.* In accordance with the securitization documents, the cash, to the extent collected, will also be returned to the bank holding company at some date in the future after having been reduced by amounts used to reimburse investors for credit losses. Based on the date when the cash is expected to be paid out to the bank holding company, the present value of this asset is currently estimated to be $2.

Both components of the spread account are considered to be residual interests under the current capital standards because both represent on-balance-sheet assets subject to more than their pro rata share of losses on the underlying portfolio of sold assets. However, the $2 asset that represents the banking holding company's retained interest in future cash flows exposes the organization to a greater degree of risk because the $2 asset presents additional uncertainty as to whether it will ever be collected. This additional uncertainty associated with the recognition of future subordinated excess cash flows results in the $2 asset being treated as a credit-enhancing interest-only strip, a subset of residual interests.

The face amount of all of the banking holding company's credit-enhancing interest-only strips is first subject to a 25 percent of tier 1 capital concentration limit. Any portion of this face amount that exceeds 25 percent of tier 1 capital is deducted from tier 1 capital. This limit will affect both a bank holding company's risk-based and leverage capital ratios. The remaining face amount of the bank holding company's credit-enhancing interest-only strips, as well as the face amount of the spread-account receivable for cash already held in the trust, is subject to the dollar-for-dollar capital requirement established for residual interests, which affects only the risk-based capital ratios.

4060.3.5.3.2.4 Credit-Enhancing Interest-Only Strips

A credit-enhancing interest-only (I/O) strip is an on-balance-sheet asset that, in form or substance, (1) represents the contractual right to receive some or all of the interest due on transferred assets and (2) exposes the bank holding company to credit risk that exceeds its pro rata claim on the underlying assets, whether through subordination provisions or other credit-enhancing techniques. Thus, credit-enhancing I/O strips include any balance-sheet asset that represents the contractual right to receive some or all of the remaining interest cash flow generated from assets that have been transferred into a trust (or other special-purpose entity), after taking into account trustee and other administrative expenses, interest payments to investors, servicing fees, and reimbursements to investors for losses attributable to the beneficial interests they hold, as well as reinvestment income and ancillary revenues[28] on the transferred assets.

Credit-enhancing I/O strips are generally carried on the balance sheet at the present value of the expected net cash flow that the banking organization reasonably expects to receive in future periods on the assets it has securitized, adjusted for some level of prepayments if relevant to that asset class, and discounted at an appropriate market interest rate. Typically, when assets are transferred in a securitization transaction that is accounted for as a sale under GAAP, the accounting recognition given to the credit-enhancing I/O strip on the seller's balance sheet results in the recording of a gain on the portion of the transferred assets that has been sold. This gain is recognized as income, thus increasing the bank holding company's capital position. The economic substance of a transaction will be used to determine whether a particular interest cash flow functions as a credit-enhancing I/O strip, and the Federal Reserve reserves the right to identify other cash flows or spread-related assets as credit-enhancing I/O strips on a case-by-case basis. For example, including some principal payments with interest and fee cash flows will not otherwise negate the regulatory capital treatment of that asset as a credit-enhancing I/O strip. Credit-enhancing I/O strips include both purchased and retained interest-only strips that serve in a credit-enhancing capacity, even though purchased I/O strips generally do not result in the creation of capital on the purchaser's balance sheet.

4060.3.5.3.2.5 Credit Derivatives

Credit derivative means a contract that allows one party (the protection purchaser) to transfer the credit risk of an asset or off-balance-sheet credit exposure to another party (the protection provider). The value of a credit derivative depends, at least in part, on the credit performance of a "reference asset."

4060.3.5.3.2.6 Credit-Enhancing Representations and Warranties

When a bank holding company transfers assets, including servicing rights, it customarily makes representations and warranties concerning those assets. When a bank holding company purchases loan-servicing rights, it may also assume representations and warranties made by the seller or a prior servicer. These representations and warranties give certain rights to other parties and impose obligations on the seller or servicer of the assets. To the extent a bank holding company's representations and warranties function as credit enhancements to protect asset purchasers or investors from credit risk, they are considered as recourse or direct-credit substitutes.

Banks and bank holding companies typically make a number of factual warranties that are unrelated to the ongoing performance or credit quality of transferred assets. These warranties entail operational risk, as opposed to the open-ended credit risk inherent in a financial guaranty, and are not considered recourse or a direct-credit substitute. Warranties that create operational risk include warranties that assets have been underwritten or collateral appraised in conformity with identified standards, as well as warranties that provide for the return of assets in instances of incomplete documentation, fraud, or misrepresentation.

Warranties can impose varying degrees of operational risk. For example, a warranty that asset collateral has not suffered damage from potential hazards entails a risk that is offset to some extent by prudent underwriting practices requiring the borrower to provide hazard insurance to the bank holding company. A warranty that asset collateral is free of environmental hazards may present acceptable operational risk for certain types of properties that have been subject to environmental assessment, depending on the circumstances. The appropriate limits for these operational risks are monitored through supervision of a bank holding company's loan-underwriting, -sale, and -servicing practices. Also, a bank holding company that provides warranties to loan purchasers and investors must

28. According to FAS 140, ancillary revenues include such revenues as late charges on the transferred assets.

include associated operational risks in its risk management of exposures arising from loan-sale or securitization-related activities. Bank holding companies should be prepared to demonstrate to examiners that operational risks are effectively managed.

Recourse or direct-credit-substitute treatment is required for warranties providing assurances about the actual value of asset collateral, including that the market value corresponds to its appraised value or that the appraised value will be realized in the event of foreclosure and sale. Warranties such as these, which make representations about the future value of a loan or related collateral, constitute an enhancement of the loan transferred, and thus are recourse arrangements or direct-credit substitutes. When a seller represents that it ''has no knowledge'' of circumstances that could cause a loan to be other than investment quality, the representation is not recourse. Bank holding companies may limit recourse exposure with warranties that directly address the condition of the asset at the time of transfer (that is, creation of an operational warranty) and by monitoring compliance with stated underwriting standards. Alternatively, bank holding companies might create warranties with exposure caps that would permit them to take advantage of the low-level-recourse rule.

The definition of credit-enhancing representations and warranties excludes warranties, such as early-default clauses and similar warranties, as discussed below. Early-default clauses typically give the purchaser of a loan the right to return the loan to the seller if the loan becomes 30 or more days delinquent within a stated period after the transfer, for example, four months after transfer. Early-default clauses can allow for a reasonable, but limited, period of time to review file documentation. Once the stated period has expired, the early-default clause will no longer trigger recourse treatment, provided there are no other provisions that constitute recourse.

Such early-default clauses and warranties are excluded from the definition of representations and warranties if they permit the return of qualifying one- to four-family residential first mortgage loans for a maximum period of 120 days from the date of transfer. To be eligible for exclusion, these warranties must cover only one- to four-family residential mortgage loans that are eligible for the 50 percent risk weight and that were originated within one year of the date of transfer. All other early-default clauses, including those for periods of greater than 120 days on qualifying one- to four-family residential first mortgages, are recourse or direct-credit substitutes until expiration.

A premium-refund clause is a warranty that obligates a seller who has sold a loan at a price in excess of par, that is, at a premium, to refund the premium, either in whole or in part, if the loan defaults or is prepaid within a certain period of time. Although premium-refund clauses can be triggered as a result of prepayments, they can also be triggered by defaults. Accordingly, premium-refund clauses are generally considered to be credit-enhancing representations and warranties. An exception exists, however, for premium-refund clauses on U.S. government–guaranteed loans and qualifying one- to four-family first mortgage loans that impose a refund obligation on a seller for a period not to exceed 120 days from the date of transfer. These types of loans hold significantly reduced credit risk.

4060.3.5.3.2.7 Clean-Up Calls

A clean-up call is an option that permits a servicer or its affiliate (which may be the originator) to take investors out of their positions in a securitization before all of the transferred loans have been repaid. The servicer accomplishes this by repurchasing the remaining loans in the pool once the pool balance has fallen below some specified level. This option in a securitization raises long-standing agency concerns that a bank holding company may implicitly assume a credit-enhancing position by exercising the option when the credit quality of the securitized loans is deteriorating. An excessively large clean-up call facilitates a securitization servicer's ability to take investors out of a pool to protect them from absorbing credit losses, and thus may indicate that the servicer has retained or assumed the credit risk on the underlying pool of loans.

Generally, clean-up calls (whether or not they are exercised) are treated as recourse and direct-credit substitutes. The purpose of treating large clean-up calls as recourse or direct-credit substitutes is to ensure that bank holding companies are not able to provide credit to the trust investors by repaying their investment when the credit quality of the pool is deteriorating without holding capital against the exposure. The focus should be on the arrangement itself and not the exercise of the call. Thus, the existence, not the exercise, of a clean-up call that does not meet the requirements of the risk-based capital rule will trigger treatment as a recourse obligation or a direct-credit substitute. A clean-up call can function as a credit enhancement because its existence provides the opportunity for a bank holding company (as servicer or an affiliate of a servicer) to provide credit support to investors by taking an action that is within the contractual terms of the securitization documents. Because clean-up calls can also serve an administrative function in the operation of a securitization, a limited exemption therefore exists for these options.

When an agreement permits a bank holding company that is a servicer or an affiliate of the servicer to elect to purchase loans in a pool, the agreement is not considered a recourse obligation or a direct-credit substitute if the agreement permits the banking organization to purchase the remaining loans in a pool when the balance of those loans is equal to or less than 10 percent of the original pool balance. This treatment will also apply to clean-up calls written with reference to less than 10 percent of the outstanding principal amount of securities. If, however, an agreement permits the remaining loans to be repurchased when their balance is greater than 10 percent of the original pool balance, the agreement is considered to be a direct-credit substitute. The exemption from direct-credit-substitute treatment for a clean-up call of 10 percent or less recognizes the real market need to be able to call a transaction when the costs of keeping it outstanding are burdensome. However, to minimize the potential for using such a feature as a means of providing support for a troubled portfolio, a bank holding company that exercises a clean-up call should not repurchase any loans in the pool that are 30 days or more past due. Alternatively, the bank holding company should repurchase the loans at the lower of their estimated fair value or their par value plus accrued interest.

Bank holding companies that repurchase assets pursuant to a clean-up call may do so based on an aggregate fair value for all repurchased assets. Bank holding companies do not have to evaluate each individual loan remaining in the pool at the time a clean-up call is exercised to determine fair value. Rather, the overall repurchase price should reflect the aggregate fair value of the assets being repurchased so that the bank holding company is not overpaying for the assets and, in so doing, providing credit support to the trust investors.

Examiners will review the terms and conditions relating to the repurchase arrangements in clean-up calls to ensure that transactions are done at the lower of fair value or par value plus accrued interest. Bank holding companies should be able to support their fair-value estimates. If the Federal Reserve concludes that a bank holding company has repurchased assets at a price that exceeds the lower of these two amounts, the clean-up call provisions in its future securitizations may be treated as recourse obligations or direct-credit substitutes. Regardless of the size of the clean-up call, the Federal Reserve will closely scrutinize and take appropriate supervisory action for any transaction in which the bank holding company repurchases deteriorating assets for an amount greater than a reasonable estimate of their fair value.

4060.3.5.3.2.8 Financial Standby Letters of Credit

A financial standby letter of credit means a letter of credit or similar arrangement that represents an irrevocable obligation to a third-party beneficiary—

1. to repay money borrowed by, advanced to, or for the account of a second party (the account party), or
2. to make payment on behalf of the account party, in the event that the account party fails to fulfill its obligation to the beneficiary.

4060.3.5.3.2.9 Loan-Servicing Arrangements

The definitions of recourse and direct-credit substitute cover loan-servicing arrangements if the bank holding company, as servicer, is responsible for credit losses associated with the serviced loans. However, cash advances made by residential mortgage servicers to ensure an uninterrupted flow of payments to investors or the timely collection of the mortgage loans are specifically excluded from the definitions of recourse and direct-credit substitute, provided the residential mortgage servicer is entitled to reimbursement for any significant advances and this reimbursement is not subordinate to other claims. To be excluded from recourse and direct-credit-substitute treatment, the bank holding company, as servicer, should make an independent credit assessment of the likelihood of repayment of the servicer advance before advancing funds, and should only make such an advance if prudent lending standards are met. Risk-based capital is assessed only against the amount of the cash advance, and the advance is assigned to the risk-weight category appropriate to the party obligated to reimburse the servicer.

If a residential mortgage servicer is not entitled to full reimbursement, then the maximum possible amount of any nonreimbursed advances on any one loan must be contractually limited to an insignificant amount of the outstanding principal on that loan. Otherwise, the servicer's obligation to make cash advances will not be excluded from the definitions of recourse and direct-credit substitute. Bank holding companies that act as servicers should establish policies on servicer advances and use discretion in determining what constitutes an ''insignificant'' servicer advance. The Federal Reserve will exercise its supervisory authority to apply recourse or direct-credit-substitute treatment to servicer cash advances that expose a bank holding company, acting as servicer, to excessive levels of credit risk.

4060.3.5.3.3 Recourse Obligations, Direct-Credit Substitutes, Residual Interests, and Asset- and Mortgage-Backed Securities

The risk-based capital treatment for recourse obligations, direct-credit substitutes, residual interests, and asset- and mortgage-backed securities in connection with asset securitizations and structured financings is described below. The capital treatment described in this subsection applies to the bank holding company's own positions.[29] For bank holding companies that comply with the market-risk rules, positions in the trading book that arise from asset securitizations, including recourse obligations, residual interests, and direct-credit substitutes, should be treated according to the market-risk rules. However, these bank holding companies remain subject to the 25 percent concentration limit for credit-enhancing I/O strips.

4060.3.5.3.3.1 Credit-Equivalent Amount

The credit-equivalent amount for a recourse obligation or direct-credit substitute is the full amount of the credit-enhanced assets for which the bank holding company directly or indirectly retains or assumes credit risk, multiplied by a 100 percent conversion factor. This treatment, however, does not apply to externally rated positions, senior positions not externally rated, residual interests, certain internally rated positions, and certain small-business loans and leases on personal property transferred with recourse.

4060.3.5.3.3.2 Risk-Weight Factor for Off-Balance-Sheet Recourse Obligations and Direct-Credit Substitutes

To determine the bank holding company's risk-weight factor for off-balance-sheet recourse obligations and direct-credit substitutes, the credit-equivalent amount is assigned to the risk category appropriate to the obligor in the underlying transaction, after considering any associated guarantees or collateral. For a direct-credit substitute that is an on-balance-sheet asset (for example, a purchased subordinated security), a bank holding company must calculate risk-weighted assets using the amount of the direct-credit substitute and the full amount of the assets it supports, that is, all the more senior positions in the structure. Direct-credit substitutes that have been syndicated or in which risk participations have been conveyed or acquired are considered off-balance-sheet items that are converted at a 100 percent conversion factor. (See section III.D.1. of the guidelines (12 C.F.R. 225, appendix A).)

4060.3.5.3.4 Ratings-Based Approach—Externally Rated Positions

Each loss position in an asset-securitization structure functions as a credit enhancement for the more senior loss positions in the structure. A multilevel, ratings-based approach is used to assess capital requirements on recourse obligations, residual interests (except credit-enhancing I/O strips), direct-credit substitutes, and senior and subordinated securities in asset securitizations. The approach uses credit ratings from the rating agencies to measure relative exposure to credit risk and determine the associated risk-based capital requirement. Using these credit ratings provides a way to use determinations of credit quality that are relied on by investors and other market participants to differentiate the regulatory capital treatment for loss positions representing different gradations of risk.

Under the ratings-based approach, the capital requirement for a position is computed by multiplying the face amount of the position by the appropriate risk weight, determined in accor-

29. This treatment also applies to BHCs that hold positions in their trading book, but are not otherwise subject to the market-risk rules.

dance with the following tables.[30] Table 2 maps long-term ratings to the appropriate risk weights. Table 3 maps short-term ratings for asset-backed commercial paper to the appropriate risk weights. The Federal Reserve has the authority, however, to override the use of certain ratings or the ratings on certain instruments, either on a case-by-case basis or through broader supervisory policy, if necessary or appropriate to address the risk that an instrument poses to a bank holding company.

The ratings-based approach can be used for certain designated asset-backed securities (including asset-backed commercial paper), recourse obligations, direct-credit substitutes, and residual interests (other than credit-enhancing I/O strips). Credit-enhancing I/O strips have been excluded from the ratings-based approach based on their high risk profile. While the ratings-based approach is available for both traded and untraded positions, the approach applies different requirements to each type of position.

Ratings-based qualification for corporate bonds or other securities. Corporate bonds or other securities not related in any way to a securitization or structured-finance program do not qualify for the ratings-based approach. Only mortgage- and asset-backed securities, recourse obligations, direct-credit substitutes, and residual interests (except credit-enhancing I/O strips) retained, assumed, or issued in connection with a securitization or structured-finance program qualify for the ratings-based approach. Securitization is defined as the pooling and repackaging by a special-purpose entity of assets or other credit exposures that can be sold to investors. A structured-finance program is defined as a program in which receivable interests and asset-backed securities issued by multiple participants are purchased by a special-purpose entity that repackages those exposures into securities that can be sold to investors. Corporate debt instruments, municipal bonds, and other securities that are not related to a securitization or structured-finance program do not meet these definitions and thus do not qualify for the ratings-based approach.

30. The rating designations (for example, AAA, BBB, A-1, and P-1) used in the tables are illustrative only and do note indicate any preference for, or endorsement of, any particular rating-agency designation system.

4060.3.5.3.4.1 Traded Positions

A traded position is only required to be rated by one rating agency. A position is defined as "traded" if, at the time it is rated by an external rating agency, there is a reasonable expectation that in the near future (1) the position may be sold to unafffiliated investors relying on the rating, or (2) an unaffiliated third party may enter into a transaction (for example, a loan or repurchase agreement) involving the position, whereby the third party relies on the rating of the position.

For a traded position that has received an external rating on a long-term position that is one grade below investment grade or better, or that has received a short-term rating that is investment grade, the bank holding company multiplies the face amount of the position by the appropriate risk weight, determined in accordance with tables 2 and 3. Stripped mortgage-backed securities and other similar instruments, such as interest-only or principal-only strips that are not credit enhancements, must be assigned to the 100 percent risk category. If a traded position has received more than one external rating, the lowest single rating will apply. Moreover, if a rating changes, the bank holding company must use the new rating.

Table 2—Risk-Weight Assignments for Externally Rated Long-Term Positions

Long-term rating category	*Rating-designation examples*	*Risk weight*
Highest or second-highest investment grade	AAA, AA	20 percent
Third-highest investment grade	A	50 percent
Lowest investment grade	BBB	100 percent
One category below investment grade	BB	200 percent

Table 3—Risk-Weight Assignments for Externally Rated Short-Term Positions

Short-term rating category	*Rating-designation examples*	*Risk weight*
Highest investment grade	A-1, P-1	20 percent
Second-highest investment grade	A-2, P-2	50 percent
Lowest investment grade	A-3, P-3	100 percent

Table 3, for short-term ratings, is not identical to table 2, for long-term ratings, because the rating agencies do not assign short-term ratings using the same methodology as long-term ratings. Each short-term rating category covers a range of longer-term rating categories.[31] For example, a P-1 rating could map to a long-term rating that is as high as Aaa or as low as A3.

4060.3.5.3.4.2 Externally Rated, Nontraded Positions

For a rated, but untraded, position to be eligible for the ratings-based approach, it must meet certain conditions. To qualify, the position (1) must be rated by more than one rating agency; (2) must have received an external rating on a long-term position that is one grade below investment grade or better or, for a short-term position, a rating that is investment grade or better by all rating agencies providing a rating; (3) must have ratings that are publicly available; and (4) must have ratings that are based on the same criteria used to rate traded securities. If the ratings are different, the lowest single rating will determine the risk-weight category to which the position will be assigned.

Split or partially rated instruments. For instruments that have been assigned separate ratings for principal and interest (split or partially rated instruments), the Federal Reserve will apply to the entire instrument the risk weight that corresponds to the lowest component rating. For example, a purchased subordinated security whose principal component is rated BBB, but whose interest component is rated B, is subject to the gross-up treatment accorded to direct-credit substitutes rated B or lower. Similarly, if a portion of an instrument is unrated, the entire position will be treated as if it were unrated. In addition to this regulatory capital treatment, the Federal Reserve may also, as appropriate, adversely classify and require write-downs for an other-than-temporary impairment on unrated and below-investment-grade securities, including split or partially rated securities. (See SR-02-16.)

4060.3.5.3.4.3 Senior Positions Not Externally Rated

A position that is not externally rated (an unrated position), but that is senior or preferred in all respects (including collateralization and maturity) to a rated position that is traded, is treated as if it had the rating assigned to the rated position. The bank holding company must satisfy the Federal Reserve that such treatment is appropriate. Senior unrated positions qualify for the risk weighting of the subordinated rated positions in the same securitization transaction as long as the subordinated rated position (1) is traded and (2) remains outstanding for the entire life of the unrated position, thus providing full credit support until the unrated position matures.

Recourse obligations and direct-credit substitutes (other than residual interests) that do not qualify for the ratings-based approach (or for the internal-ratings, program-ratings, or computer-program-ratings approaches outlined below) receive "gross-up" treatment, that is, the bank holding company holding the position must hold capital against the amount of the position, plus all more senior positions, subject to the low-level-exposure requirement.[32] This

31. See, for example, *Moody's Global Ratings Guide*, June 2001, p. 3.

32. Gross-up treatment means that a position is combined with all more senior positions in the transaction. The result is then risk-weighted based on the obligor or, if relevant, the guarantor or the nature of the collateral. For example, if a BHC retains a first-loss position (other than a residual interest) in a pool of mortgage loans that qualify for a 50 percent risk weight, the BHC would include the full amount of the assets in the pool, risk-weighted at 50 percent, in its risk-weighted assets for purposes of determining its risk-based capital ratio. The low-level-exposure rule provides that the dollar amount of risk-based capital required for assets transferred with recourse should not exceed the maximum dollar amount for which a BHC is contractually liable.

grossed-up amount is placed into a risk-weight category according to the obligor or, if relevant, according to the guarantor or nature of the collateral. The grossed-up amount multiplied by both the risk weight and 8 percent is never greater than the full capital charge that would otherwise be imposed on the assets if they were on the banking organization's balance sheet.[33]

4060.3.5.3.5 Residual Interests

4060.3.5.3.5.1 Credit-Enhancing I/O Strips

After applying the concentration limit to credit-enhancing I/O strips (both purchased and retained), a bank holding company must maintain risk-based capital for a credit-enhancing I/O strip (both purchased and retained), regardless of the external rating on that position, equal to the remaining amount of the credit-enhancing I/O strip (net of any existing associated deferred tax liability), even if the amount of risk-based capital required to be maintained exceeds the full risk-based capital requirement for the assets transferred. Transactions that, in substance, result in the retention of credit risk associated with a transferred credit-enhancing I/O strip will be treated as if the credit-enhancing I/O strip were retained by the bank holding company and not transferred.

4060.3.5.3.5.2 Other Residual Interests

Residual interests that are not eligible for the ratings-based approach receive dollar-for-dollar treatment. Dollar-for-dollar treatment means, effectively, that one dollar in total risk-based capital must be held against every dollar of a residual interest retained on the balance sheet (net of any existing associated deferred tax liability), even if the amount of risk-based capital required to be maintained exceeds the full risk-based capital requirement for the assets transferred. This capital treatment applies to all residual interests, except for credit-enhancing I/O strips that have already been deducted from tier 1 capital under the concentration limit.[34] Transactions that, in substance, result in the retention of credit risk associated with a transferred residual interest will be treated as if the residual interest were retained by the bank holding company and not transferred. When the aggregate capital requirement for residual interests and other recourse obligations in connection with the same transfer of assets exceeds the full risk-based capital requirement for those assets, a bank holding company must maintain risk-based capital equal to the greater of the risk-based capital requirement for the residual interest or the full risk-based capital requirement for the assets transferred.

Accrued interest receivables held on credit card securitizations. The accrued interest receivable (AIR) asset constitutes a subordinated residual (retained) interest in the transferred securitized assets, and it meets the definition of recourse exposure for risk-based capital purposes. Recourse exposures (such as the AIR asset) require risk-based capital against the full, risk-weighted amount of the assets transferred with recourse, subject to the low-level-recourse rule.[35] The AIR asset serves as a credit enhancement to protect third-party investors in the securitization from credit losses, and it meets the definition of a residual interest under the risk-based capital adequacy rules for the treatment of recourse arrangements. Under those rules, an institution must hold dollar-for-dollar capital against residual interests, even if that amount exceeds the full equivalent risk-based capital charge on the transferred assets.[36] The institution is expected to hold risk-based capital in an amount consistent with the subordinated nature of the AIR asset.

In a typical credit card securitization, an institution transfers a pool of credit card receivables to a trust, as well as the rights to receive future payments of principal, interest, and fee income

33. For assets that are assigned to the 100 percent risk-weight category, the minimum capital charge is 8 percent of the amount of assets transferred, and banking organizations are required to hold 8 cents of capital for every dollar of assets transferred with recourse. For assets that are assigned to the 50 percent risk-weight category, the minimum capital charge is 4 cents of capital for every dollar of assets transferred with recourse.

34. Residual interests that are retained or purchased credit-enhancing I/O strips are first subject to a capital concentration limit of 25 percent of tier 1 capital. For risk-based capital purposes (but not for leverage capital purposes), once this concentration limit is applied, a bank holding company must then hold dollar-for-dollar capital against the face amount of credit-enhancing I/O strips remaining.

35. The low-level-recourse rule limits the maximum risk-based capital requirement to the lesser of a banking organization's maximum contractual exposure or the full capital charge against the outstanding amount of assets transferred with recourse.

36. For a complete description of the appropriate capital treatment for recourse, residual interests, and credit-enhancing interest-only strips, see "Recourse, Direct Credit Substitutes, and Residual Interests in Asset Securitizations," 66 *Fed. Reg.* 59614 (November 29, 2001).

from those receivables. If a securitization transaction qualifies as a sale under FAS 140, the selling institution removes the receivables that were sold from its reported assets and continues to carry any retained interests in the transferred receivables on its balance sheet; the right to these future cash flows should be reported as an AIR asset.[37,38] Any accrued amounts (cash flows) the institution collects (for example, accrued fees and finance charges) generally must be transferred to the trust and will be used first by the trustee for the benefit of third-party investors to satisfy more senior obligations and for the payment of trust expenses (such as servicing fees, investor-certificate interest, and investor-principal charge-offs). Any remaining excess fee and finance charges will flow back to the seller.

In accounting for the sale, the AIR asset is treated as a subordinated retained interest of credit card receivables when computing the gain or loss on sale. Consistent with GAAP, this means that the value of the AIR, at the date of transfer, must be adjusted based on its relative fair (market) value. This adjustment will typically result in the carrying amount of the AIR being lower than its book (face) value prior to securitization. The AIR should be reported in regulatory reports as "Other Assets" and not as a loan receivable. (See SR-02-12 and SR-02-22.)

37. The AIR represents fees and finance charges that have been accrued on receivables that the institution has securitized and sold to other investors. For example, in credit card securitizations, this AIR asset may include both finance charges billed but not yet collected and finance charges accrued but not yet billed on the securitized receivables.

38. Some institutions may categorize part or all of this receivable as a loan, a "due from trust" account, a retained interest in the trust, or as part of an interest-only strip receivable.

4060.3.5.3.6 Other Unrated Positions

A position (but not a residual interest) maintained in connection with a securitization and that is not rated by a rating agency may be risk-weighted based on the bank holding company's internal determination of the credit rating of the position, as specified in table 4 below, multiplied by the face amount of the position. The bank holding company may use three approaches to determine the capital requirements for certain unrated direct-credit substitutes and recourse obligations. Under each of these approaches, the bank holding company must satisfy the Federal Reserve that the use of the approach is appropriate for the particular bank holding company and for the exposure being evaluated. The risk weight that may be applied to an exposure under these alternative approaches is limited to a minimum of 100 percent.

Table 4—Risk-Weight Assignments for Unrated Positions Using the Alternative Approaches[1]

Rating category	*Rating-designation examples*	*Risk weight*
Highest or second-highest investment grade	AAA, AA	100 percent
Third-highest investment grade	A	100 percent
Lowest investment grade	BBB	100 percent
One category below investment grade	BB	200 percent

1. such as the internal-ratings approach

4060.3.5.3.6.1 Internal Risk-Rating Systems for Asset-Backed Commercial Paper Programs

A bank holding company that has a qualifying internal risk-rating system can use that system to apply the ratings-based approach to its unrated direct-credit substitutes in asset-backed commercial paper programs. Internal risk ratings could be used to qualify such a credit enhancement for a risk weight of 100 percent or 200 percent under the ratings-based approach, but not for a risk weight of less than 100 percent.

Most sophisticated banking organizations that participate extensively in the asset-securitization business assign internal risk ratings to their credit exposures, regardless of the form of the exposure. Usually, internal risk ratings more finely differentiate the credit quality of a banking organization's exposures than the categories used to evaluate credit risk during bank holding company inspections (pass, substandard, doubtful, or loss). An individual bank holding company's internal risk ratings may be associated with a certain probability of default, loss in the event of default, and loss volatility.

The credit enhancements that sponsors obtain for their commercial paper conduits are rarely rated or traded. If an internal risk-ratings approach were not available for these unrated credit enhancements, the provider of the enhancement would have to obtain two ratings solely to avoid the gross-up treatment that would otherwise apply to nontraded positions in asset securitizations for risk-based capital purposes. However, before a provider of an enhancement decides whether to provide a credit enhancement for a particular transaction (and at what price), the provider will generally perform its own analysis of the transaction to evaluate the amount of risk associated with the enhancement. An internal risk-ratings approach, therefore, is potentially less costly than a ratings-based approach that relies exclusively on ratings by the rating agencies for the risk weighting of these positions.

Internal risk ratings that correspond to the rating categories of the rating agencies can be mapped to risk weights under the Federal Reserve's capital standards. This mapping can be done in a way that would make it possible to differentiate the riskiness of various unrated direct-credit substitutes in asset-backed commercial paper programs based on credit risk. The use of internal risk ratings, however, may raise concerns about the accuracy and consistency of the ratings, especially because the mapping of ratings to risk-weight categories will give bank holding companies an incentive to rate their risk exposures in a way that minimizes the effective capital requirement. A bank holding company engaged in asset-backed commercial paper securitization activities that wishes to use the internal risk-ratings approach must therefore be able to demonstrate to the satisfaction of the Federal Reserve, before relying on its internal ratings, that the bank holding company's internal credit-risk rating system is adequate. Adequate internal risk-rating systems usually have the following characteristics:

1. The internal risk ratings are an integral part of a bank holding company's effective risk-management system that explicitly incorporates the full range of risks arising from the bank holding company's participation in securitization activities. The system must also fully take into account the effect of such activities on the bank holding company's risk profile and capital adequacy.
2. The internal credit ratings must link to measurable outcomes, such as the probability that a position will experience any losses, the expected losses on that position in the event of default, and the degree of variance in losses given default on that position.
3. The ratings separately consider the risk associated with the underlying loans or borrowers, as well as the risk associated with the specific positions in a securitization transaction.
4. The ratings identify gradations of risk among "pass" assets and other risk positions, and not just among assets that have deteriorated to the point that they fall into "watch" grades. Although it is not necessary for a bank holding company to use the same categories as the rating agencies, its internal ratings must correspond to the ratings of the rating agencies so that the Federal Reserve can determine which internal risk rating corresponds to each rating category of the rating agencies. A bank holding company would be responsible for demonstrating, to the satisfaction of the Federal Reserve, how these ratings correspond with the rating-agency standards that are used as the framework for the asset-securitization portion of the risk-based capital rule. This correlation is necessary so that the mapping of credit ratings to risk-weight categories in the ratings-based approach can be applied to internal ratings.
5. The ratings classify assets into each risk grade using clear, explicit criteria, including subjective factors.
6. Independent credit-risk-management or loan-review personnel assign or review the credit-risk ratings. These personnel should have adequate training and experience to ensure that they are fully qualified to perform this function.
7. An internal-audit procedure periodically verifies that internal risk ratings are assigned in accordance with the bank holding company's established criteria.[39]

39. The audit may be performed by any group within the organization that is qualified to audit the system and is independent of both the group that makes the decision to extend credit to the asset-baked commercial paper program and the groups that develop and maintain the internal credit-risk rating system. (See SR-02-16.)

8. The performance of internal ratings is tracked over time to evaluate how well risk grades are being assigned, and adjustments are being made to the rating system when the performance of the rated positions diverges from assigned ratings, and the individual ratings are adjusted accordingly.
9. Credit-risk rating assumptions are consistent with, or more conservative than, the credit-risk rating assumptions and methodologies of the rating agencies.

If it determines that a bank holding company's rating system is not adequate, the Federal Reserve may preclude the bank holding company from applying the internal risk-ratings approach to new transactions for risk-based capital purposes until the deficiencies have been remedied. Additionally, depending on the severity of the problems identified, the Federal Reserve may decline to rely on the internal risk ratings that the bank holding company had applied to previous transactions for purposes of determining its regulatory capital requirements.

4060.3.5.3.6.2 Ratings of Specific Unrated Positions in Structured-Financing Programs

A bank holding company may also use a rating obtained from a rating agency for an unrated direct-credit substitute or recourse obligation (other than a residual interest) that is assumed or retained in connection with a structured-finance program, if a rating agency has reviewed the terms of the program (according to the specifications set by the rating agency) and stated a rating for positions associated with the program. If the program has options for different combinations of assets, standards, internal credit enhancements, and other relevant factors, and if the rating agency specifies ranges of rating categories to them, the bank holding company may apply the rating category that corresponds to the bank holding company's position. To rely on a program rating, the bank holding company must demonstrate to the Federal Reserve's satisfaction that the credit-risk rating assigned to the program meets the same standards generally used by rating agencies for rating traded positions.

The bank holding company must also demonstrate to the Federal Reserve's satisfaction that the criteria underlying the rating agency's assignment of ratings for the structured-financing program are satisfied for the particular position. If a bank holding company participates in a securitization sponsored by another party, the Federal Reserve may authorize the bank holding company to use this approach based on a programmatic rating obtained by the sponsor of the program.

Bank holding companies with limited involvement in securitization activities may find the above alternative to be useful. In addition, some bank holding companies extensively involved in securitization activities already rely on ratings of the credit-risk positions under their securitization programs as part of their risk-management practices. Such bank holding companies can rely on these ratings for regulatory capital purposes if the ratings are part of a sound overall risk-management process and the ratings reflect the risk of nontraded positions to the bank holding companies.

This approach in a structured-financing program can be used to qualify a direct-credit substitute or recourse obligation (but not a residual interest) for a risk weight of 100 percent or 200 percent of the face value of the position under the ratings-based approach, but not for a risk weight of less than 100 percent.

4060.3.5.3.6.3 Credit-Assessment Computer Programs

A bank holding company (particularly a bank holding company with limited involvement in securitization activities) may use an internal ratings-based approach if it is using an acceptable credit-assessment computer program, developed by a rating agency, to determine the rating of a direct-credit substitute or a recourse obligation (but not a residual interest) issued in connection with a structured-finance program. To be used by a bank holding company for risk-based capital purposes, a computer program must have been developed by a rating agency. Further, the bank holding company must demonstrate to the satisfaction of the Federal Reserve that the computer program's credit assessments correspond credibly and reliably to the rating standards of the rating agencies for traded positions in securitizations and with the rating of traded positions in the financial markets. The latter would generally be shown if investors and other market participants significantly used the computer program for risk-assessment purposes. In addition, the bank holding company must demonstrate to the Federal Reserve's satisfaction that the program was designed to apply to its particular direct-credit substitute or recourse exposure and that it has properly implemented the computer program. In general, sophisticated bank holding companies with extensive securitization activities should use this approach only if the computer program is an integral part of their risk-management systems and if the bank holding company's systems fully capture the risks from its securitization activities. This computer-program approach can be used to qualify a direct-credit substitute or recourse obligation (but not a residual interest) for a risk weight of 100 percent or 200 percent of the face value of the position under the ratings-based approach, but not for a risk weight of less than 100 percent.

4060.3.5.3.7 Limitations on Risk-Based Capital Requirements

4060.3.5.3.7.1 Low-Level Exposure

If a bank holding company's maximum contractual exposure to loss retained or assumed in connection with a recourse obligation or a direct-credit substitute, except for a residual interest, is less than the effective risk-based capital requirement for the enhanced assets, the risk-based capital requirement is limited to the maximum contractual exposure, less any recourse liability account established in accordance with GAAP. This limitation does not apply when a bank holding company provides credit enhancement beyond any contractual obligation to support assets it has sold.

4060.3.5.3.7.2 Mortgage-Related Securities or Participation Certificates Retained in a Mortgage Loan Swap

If a bank holding company holds a mortgage-related security or a participation certificate as a result of a mortgage loan swap with recourse, capital is required to support the recourse obligation plus the percentage of the mortgage-related security or participation certificate that is not covered by the recourse obligation. The total amount of capital required for the on-balance-sheet asset and the recourse obligation, however, is limited to the capital requirement for the underlying loans, calculated as if the bank holding company continued to hold the loans as on-balance-sheet assets.

4060.3.5.3.7.3 Related On-Balance-Sheet Assets

If a recourse obligation or direct-credit substitute also appears as a balance-sheet asset, the balance-sheet asset is not included in a bank holding company's risk-weighted assets to the extent the value of the balance-sheet asset is already included in the off-balance-sheet credit-equivalent amount for the recourse obligation or direct-credit substitute. In the case of loan-servicing assets and similar arrangements with embedded recourse obligations or direct-credit substitutes, both the on-balance-sheet assets and the related recourse obligations and direct-credit substitutes must be separately risk-weighted and incorporated into the risk-based capital calculation.

4060.3.5.3.8 Other Types of Off-Balance-Sheet Transactions

4060.3.5.3.8.1 Distinction Between Financial and Performance Standby Letters of Credit

For risk-based capital purposes, the vast majority of standby letters of credit a bank holding company issues are considered financial in nature. On the one hand, in issuing a financial standby letter of credit, a bank holding company guarantees that the account party will fulfill a contractual financial obligation that involves payment of money. On the other hand, in issuing a performance standby letter of credit, a bank holding company guarantees that the account party will fulfill a contractual nonfinancial obligation, that is, an obligation that does not entail the payment of money. For example, a standby letter of credit that guarantees that an insurance company will pay as required under the terms of a policy is deemed to be financial and is converted at 100 percent, while a letter of credit that guarantees a contractor will pave a street according to certain specifications is deemed to be performance-related and is converted at 50 percent. Financial standby letters of credit have a higher conversion factor in large part because, unlike performance standby letters of credit, they tend to be drawn down only when the account party's financial condition has deteriorated.

4060.3.5.3.8.2 Sale and Repurchase Agreements and Forward Agreements

Forward agreements are legally binding contractual obligations to purchase assets with certain drawdown at a specified future date. Such obligations include forward purchases, forward forward deposits placed,[40] and partly paid shares and securities; they do not include commitments to make residential mortgage loans or forward foreign-exchange contracts.

4060.3.5.3.8.3 Participations of Off-Balance-Sheet Transactions

If a standby letter of credit or commitment has been participated to other institutions in the form of a syndication, as defined in the instructions to the call report, that is, if each bank holding company is responsible only for its pro rata share of loss and there is no recourse to the originating bank holding company, each bank holding company includes only its pro rata share of the standby or commitment in its risk-based capital calculation.

The treatment differs, however, if the participation takes the form of a conveyance of a risk participation. In such a participation, the originating bank holding company remains liable to the beneficiary for the full amount of the standby or commitment if the institution that has acquired the participation fails to pay when the instrument is drawn. Under this arrangement, the originating bank holding company is exposed to the credit risk of the institution that has acquired the conveyance rather than that of the account party. Accordingly, for risk-based capital purposes, the originating bank holding company should convert the full amount of the standby or commitment to an on-balance-sheet credit-equivalent amount. The credit-equivalent amount of the portion of the credit that has not been conveyed is assigned to the risk category appropriate to the obligor, after giving effect to any collateral or guarantees. The portion that has been conveyed is assigned either to the same risk category as the obligor or to the risk category appropriate to the institution acquiring the participation, whichever category carries the lower risk weight. Any remainder is assigned to the risk category appropriate to the obligor, guarantor, or collateral. For example, the pro rata share of the full amount of the assets supported, in whole or in part, by a direct-credit substitute conveyed as a risk participation to a U.S. domestic depository institution or foreign bank holding company is assigned to the 20 percent risk category. Risk participations with a remaining maturity of over one year that are conveyed to non-OECD banks are to be assigned to the 100 percent risk category, unless a lower risk category is appropriate to the obligor, guarantor, or collateral.

40. Forward forward deposits accepted are treated as interest-rate contracts.

4060.3.5.3.9 Small-Business Loans and Leases on Personal Property Transferred with Recourse (FAS 140 Sales)

A qualifying banking organization (that is, a bank holding company) that has transferred small-business loans and leases on personal property (small-business obligations) with recourse can include in weighted-risk assets only the amount of retained recourse, provided two conditions are met. First, the transaction must be treated as a FAS 140 sale under GAAP and, second, the banking organization must establish pursuant to GAAP a noncapital reserve sufficient to meet the organization's reasonably estimated liability under the recourse arrangement. Only loans and leases to businesses that meet the criteria for a small-business concern established by the Small Business Administration under section 3(a) of the Small Business Act are eligible for this capital treatment.

A banking organization qualifies if it meets the criteria for well capitalized or, by order of the Board, adequately capitalized, as those criteria are set forth in the Board's prompt-corrective-action regulation for state member banks (12 C.F.R. 208.40). For purposes of determining whether an organization meets these criteria, its capital ratios must be calculated without regard to the capital treatment for transfers of small-business obligations with recourse. The total outstanding amount of recourse retained by a qualifying banking organization on transfers of small-business obligations receiving the preferential capital treatment cannot exceed 15 percent of the organization's total risk-based capital. By order, the Board may approve a higher limit.

If a bank holding company ceases to be qualifying or exceeds the 15 percent capital limitation, the preferential capital treatment will continue to apply to any transfers of small-business obligations with recourse that were consummated during the time that the organization was qualifying and did not exceed the capital limit.

4060.3.5.3.10 Securities Lent

Examiners are to review securities-lent transactions of banking organizations and verify that, when banking organizations have risk of loss as either principal or agent, the transaction is converted at 100 percent and assigned to the appropriate risk-weight category. The guidelines treat securities lent in two ways, depending on the nature of the transactions and the risk of loss. If, however, banking organizations are acting as their customers' agent and do not indemnify their customers against loss, the amount of securities lent is excluded from risk-based capital calculations. If banking organizations lend their own securities or, acting as an agent for a customer, lend the customers' securities and indemnify their customers against loss, the amount of securities lent is converted at 100 percent and assigned the risk weight appropriate to the obligor or, if applicable, to any collateral delivered to the lending organization or the independent custodian acting on the lending organization's behalf. Where a banking organization is acting as agent for a customer in a transaction involving the lending or sale of securities that is collateralized by cash delivered to the banking organization, the transaction is deemed to be collateralized by cash on deposit in a subsidiary depository institution for purposes of determining the appropriate risk-weight category—provided that (1) any indemnification is limited to no more than the difference between the market value of the securities and the cash collateral received and (2) any reinvestment risk associated with that cash collateral is borne by the customer.

If securities lent are secured by cash on deposit in subsidiary depository institutions, the appropriate risk weight is either zero or 20 percent, depending on qualification criteria. Claims collateralized by cash on deposit in subsidiary depository institutions for which a margin of collateral is maintained on a daily basis—fully taking into account any change in the bank's exposure to the obligor or counterparty under a claim in relation to the market value of the collateral held in support of that claim—are assigned the zero risk weight. When securities lent are collateralized by cash on deposit in subsidiary lending institutions for which a daily margin is *not* maintained, the cash collateral is assigned a 20 percent risk weight.

4060.3.5.3.11 Commitments to Make Off-Balance-Sheet Transactions

A commitment to make a standby letter of credit is considered to be a standby letter of credit. Accordingly, such a commitment should be converted to an on-balance-sheet credit-equivalent amount at 100 percent if it is a commitment to make a financial standby letter of credit or at 50 percent if it is a commitment to make a performance standby letter of credit.

A commitment to make a commitment is treated as a single commitment whose maturity is the combined maturity of the two commitments. For example, a six-month commitment to make a one-year commitment is considered to be a single 18-month commitment. Since the maturity is over one year, such a commitment would be accorded the 50 percent conversion factor appropriate to long-term commitments, rather than the zero percent conversion factor that would be accorded to separate unrelated short-term commitments of six months and one year.

A commitment to make a commercial letter of credit may be treated as either a commitment or a commercial letter of credit, whichever results in the lower conversion factor. Normally, this would mean that a commitment under one year to make a commercial letter of credit would be treated as a commitment and converted at zero percent, while a similar commitment of over one year would be treated as a commercial letter of credit and converted at 20 percent.

If a commitment facility is structured so that it can be drawn down in several forms, such as a standby letter of credit, a loan, or a commercial letter of credit, the entire facility should be treated as a commitment to extend credit in the form that incurs the highest capital charge. Thus, if a facility could be drawn down in any of the three forms just cited, the entire facility would be treated as a commitment to issue a standby letter of credit and would be converted at 100 percent rather than being treated as a commitment to make a loan or commercial letter of credit, which would have a lower conversion factor.

4060.3.5.3.12 Unused Commitments

Unused commitments (including underwriting commitments and commercial and consumer credit commitments) that have an original maturity of one year or less are converted at zero percent. Facilities that are unconditionally cancelable at any time by the banking organization are not deemed to be commitments, provided that a separate credit decision is made before each drawing under the facility.

Unused commitments with an original maturity of over one year are converted at 50 percent. For this purpose, ''original maturity'' is defined as the length of time between the date the commitment is issued and the earliest date on which (1) the banking organization can, at its option, unconditionally cancel[41] the commitment *and* (2) the banking organization is scheduled to (and as a normal practice actually does) review the facility to determine whether or not the unused commitment should be extended. (See SR-90-23 regarding loan commitments and put options.)

Banking organizations must continue to review unused commitments at least annually to determine that they qualify for short-term commitment treatment. Examiners are to review unused commitments to determine that they meet the conditions for being treated as short-term or long-term and are appropriately weighted for risk-based capital calculations.

A commitment may be issued that expires within one year with the understanding that the commitment will be renewed upon expiration subject to a thorough credit review of the obligor. Such a commitment may be converted at zero percent only if (1) the renegotiation process is carried out in good faith, involves a full credit assessment of the obligor, and allows the bank holding company the flexibility to alter the terms and conditions of the new commitment; (2) the bank holding company has absolute discretion to decline renewal or extension of the commitment; and (3) the renegotiated commitment expires within 12 months from the time it is made. Some commitments contain unusual renegotiation arrangements that would give the borrower a considerable amount of advance notice that a commitment would not be renewed. Provisions of this kind can have the effect of creating a rolling-commitment arrangement that should be treated for risk-based capital purposes as a long-term commitment and, thus, be converted to a credit-equivalent amount at 50 percent. Normally, the renegotiation process should take no more than six to eight weeks, and in many cases it should take less time. The renegotiation period should immediately precede the expiration date of the commitment. The reasons for provisions in a commitment arrangement that would appear to provide for a protracted renegotiation period should be thoroughly documented by the bank holding company and reviewed by the examiner.

A commitment may be structured to be drawn down in a number of tranches, some exercisable in one year or less and others exercisable in over one year. The full amount of such a commitment is deemed to be over one year and converted at 50 percent. Some long-term commitments may permit the customer to draw down varying amounts at different times to accommodate, for example, seasonal borrowing needs. The 50 percent conversion factor should be applied to the maximum amount that could be drawn down under such commitments.

41. This does not refer to material-adverse-change clauses.

4060.3.5.3.13 Derivative Contracts (Interest-Rate, Exchange-Rate, and Commodity- (Including Precious Metals) and Equity-Linked Contracts)

Credit-equivalent amounts are computed for each of the following off-balance-sheet-derivative contracts:

1. interest-rate contracts
   a. single-currency interest-rate swaps
   b. basis swaps
   c. forward rate agreements
   d. interest-rate options purchased (including caps, collars, and floors purchased)
   e. any other instrument linked to interest rates that gives rise to similar credit risks (including when-issued securities and forward forward deposits accepted)
2. exchange-rate contracts
   a. cross-currency interest-rate swaps
   b. forward foreign-exchange-rate contracts
   c. currency options purchased
   d. any other instrument linked to exchange rates that gives rise to similar credit risks
3. equity derivative contracts
   a. equity-linked swaps
   b. equity-linked options purchased
   c. forward equity-linked contracts
   d. any other instrument linked to equities that gives rise to similar credit risks
4. commodity (including precious metal) derivative contracts
   a. commodity-linked swaps
   b. commodity-linked options purchased
   c. forward commodity-linked contracts

d. any other instrument linked to commodities that gives rise to similar credit risks

Derivative contract exceptions. Exchange-rate contracts with an original maturity of 14 or fewer calendar days and derivative contracts traded on exchanges that require daily receipt and payment of cash-variation margin may be excluded from the risk-based ratio calculation. Gold contracts are accorded the same treatment as exchange-rate contracts except that gold contracts with an original maturity of 14 or fewer calendar days are included in the risk-based ratio calculation. Over-the-counter options purchased are included and treated in the same way as other derivative contracts.

4060.3.5.3.13.1 Calculation of Credit-Equivalent Amounts and the Application of Risk Weights

The credit-equivalent amount of a derivative contract that is not subject to a qualifying bilateral netting contract in accordance with subsection 4060.3.5.3.4 above is equal to the sum of—

1. the current exposure (sometimes referred to as the replacement cost) of the contract and
2. an estimate of the potential future credit exposure of the contract.

The current exposure is determined by the mark-to-market value of the contract. If the mark-to-market value is positive, then the current exposure is equal to that mark-to-market value. If the mark-to-market value is zero or negative, then the current exposure is zero. Mark-to-market values are measured in dollars, regardless of the currency or currencies specified in the contract, and should reflect changes in the relevant rates, prices, and indices, as well as in counterparty credit quality.

The potential future credit exposure of a contract, including a contract with a negative mark-to-market value, is estimated by multiplying the notional principal amount of the contract by a credit-conversion factor. Banking organizations should use, subject to examiner review, the effective rather than the apparent or stated notional amount in this calculation. The conversion factors (in percent) are listed on the next page.

For a contract that is structured such that on specified dates any outstanding exposure is settled and the terms are reset so that the market value of the contract is zero, the remaining maturity is equal to the time until the next reset date. For an interest-rate contract with a remaining maturity of more than one year that meets these criteria, the minimum conversion factor is 0.5 percent.

For a contract with multiple exchanges of principal, the conversion factor is multiplied by the number of remaining payments in the contract. A derivative contract not included in the definitions of interest-rate, exchange-rate, equity, or commodity contracts as set forth in subsection 4060.3.5.3.4 is subject to the same conversion factors as a commodity, excluding precious metals.

No potential future credit exposure is calculated for a single-currency interest-rate swap in which payments are made based on two floating-rate indices, so-called floating/floating or basis swaps; the credit exposure on these contracts is evaluated solely on the basis of their mark-to-market values.

The Board has noted that these conversion factors, which are based on observed volatilities of the particular types of instruments, are subject to review and modification in light of changing volatilities or market conditions.

100 Percent Credit-Conversion Factor for Off-Balance-Sheet Items for BHCs

1. direct-credit substitutes (These include general guarantees of indebtedness and all guarantee-type instruments, including standby letters of credit backing the financial obligations of other parties.)
2. risk participations in banker's acceptances and direct-credit substitutes, such as standby letters of credit
3. sale and repurchase agreements and assets sold with recourse that are not included on the balance sheet
4. forward agreements to purchase assets, including financing facilities, on which drawdown is certain
5. securities lent for which the banking organization is at risk

50 Percent Conversion Factor

1. transaction-related contingencies (These include bid bonds, performance bonds, warranties, and standby letters of credit related to particular transactions and performance standby letters of credit. Performance standby letters of credit represent obligations backing the performance of nonfinancial or commercial contracts or undertakings.)

CONVERSION FACTORS
[in percent]

Remaining maturity	*Interest-rate*	*Exchange-rate and gold*	*Equity*	*Commodity, excluding precious metals*	*Precious metals, except gold*
One year or less	0.0	1.0	6.0	10.0	7.0
Over one to five years	0.5	5.0	8.0	12.0	7.0
Over five years	1.5	7.5	10.0	15.0	8.0

2. unused portions of commitments with an original maturity exceeding one year, including underwriting commitments and commercial and consumer credit commitments
3. revolving underwriting facilities (RUFs), note-issuance facilities (NIFs), and other similar arrangements

20 Percent Conversion Factor

Short-term, self-liquidating, trade-related contingencies that arise from the movement of goods, including commercial letters of credit and other documentary letters of credit collateralized by the underlying shipments.

Zero Percent Conversion Factor

Unused portions of commitments with an original maturity of one year or less, or which are unconditionally cancelable at any time, provided a separate credit decision is made before each drawing under the facility.

Examples of the calculation of credit-equivalent amounts for these instruments are shown on the following page.

CALCULATING CREDIT-EQUIVALENT AMOUNTS FOR DERIVATIVE CONTRACTS

Type of contract	*Notional principal amount*	*Conversion factor*	*Potential exposure (dollars)*	*Mark-to-market*	*Current exposure (dollars)*		*Credit-equivalent amount*
(1) 120-day forward foreign exchange	5,000,000	.01	50,000	100,000	100,000		150,000
(2) 4-year forward foreign exchange	6,000,000	.05	300,000	–120,000	0		300,000
(3) 3-year single-currency fixed and floating interest-rate swap	10,000,000	.005	50,000	200,000	200,000		250,000
(4) 6-month oil swap	10,000,000	.10	1,000,000	–250,000	0		1,000,000
(5) 7-year cross-currency floating and floating interest-rate swap	20,000,000	.075	1,500,000	–1,500,000	0		1,500,000
TOTAL			2,900,000	+	300,000	=	3,200,000

If contracts (1) through (5) above are subject to a qualifying bilateral netting contract, then the following applies:

Contract	*Potential future exposure*		*Net current exposure*		*Credit-equivalent amount*
(1)	50,000				
(2)	300,000				
(3)	50,000				
(4)	1,000,000				
(5)	1,500,000				
TOTAL	2,900,000	+	0	=	2,900,000

Note: The total of the mark-to-market values from the first table is –$1,570,000. Since this is a negative amount, the net current exposure is zero.

To recognize the effects of bilateral netting on potential future exposure, the following formula applies:

$$A_{net} = (0.4 \times A_{gross}) + 0.6(NGR \times A_{gross})$$

In the above example, where the net current exposure is zero, the credit-equivalent amount would be calculated as follows:

$$NGR = 0 = (0/300{,}000)$$

$$A_{net} = (0.4 \times \$2{,}900{,}000) + .6(0 \times \$2{,}900{,}000)$$

$$A_{net} = \$1{,}160{,}000$$

The credit-equivalent amount is

$$\$1{,}160{,}000 + 0 = \$1{,}160{,}000.$$

If the net current exposure was a positive number, for example $200,000, the credit equivalent would be calculated as follows:

$$NGR = .67 = (\$200{,}000/\$300{,}000)$$

$$A_{net} = (0.4 \times \$2{,}900{,}000) + 0.6(.67 \times \$2{,}900{,}000)$$

$$A_{net} = \$2{,}325{,}800$$

The credit-equivalent amount would be $2,325,800 + $200,000 = $2,525,800.

Applying risk weights. Once the credit-equivalent amount for a derivative contract, or a group of derivative contracts subject to a qualifying bilateral netting contract, has been determined, that amount is assigned to the risk-weight category appropriate to the counterparty, or, if relevant, the guarantor or the nature of any collateral.[42] However, the maximum weight that will be applied to the credit-equivalent amount of such contracts is 50 percent.

4060.3.5.3.13.2 Avoidance of Double-Counting of Derivative Contracts

In certain cases, credit exposures arising from derivative contracts may be reflected, in part, on the balance sheet. To avoid double-counting such exposures in the assessment of capital adequacy and, perhaps, assigning inappropriate risk weights, counterparty credit exposures arising from the derivative instruments covered by the guidelines may need to be excluded by examiners from balance-sheet assets in calculating a banking organization's risk-based capital ratios. This exclusion will eliminate the possibility that an organization could be required to hold capital against both an off-balance-sheet and on-balance-sheet amount for the same item. This treatment is not accorded to margin accounts and accrued receivables related to interest-rate and exchange-rate contracts.

The aggregate on-balance-sheet amount excluded from the risk-based capital calculation is equal to the lower of—

1. each contract's positive on-balance-sheet amount or
2. its positive market value included in the off-balance-sheet risk-based capital calculation.

For example, a forward contract that is marked to market will have the same market value on the balance sheet as is used in calculating the credit-equivalent amount for off-balance-sheet exposures under the guidelines. Therefore, the on-balance-sheet amount is not included in the risk-based capital calculation. Where either the contract's on-balance-sheet amount or its market value is negative or zero, no deduction from on-balance-sheet items is necessary for that contract.

If the positive on-balance-sheet asset amount exceeds the contract's market value, the excess (up to the amount of the on-balance-sheet asset) should be included in the appropriate risk-weight category. For example, a purchased option will often have an on-balance-sheet amount equal to the fee paid until the option expires. If that amount exceeds market value, the excess of carrying value over market value would be included in the appropriate risk-weight category for purposes of the on-balance-sheet portion of the calculation.

4060.3.5.3.14 Treatment of Commodity and Equity Contracts

Credit-equivalent amounts of swap agreements and futures, forwards, and option contracts on commodities, equities, and equity indexes are calculated in the same way as credit-equivalent amounts of foreign-exchange-rate contracts. Contracts on commodities, equities, and equity

42. For derivative contracts, sufficiency of collateral or guarantees is determined by the market value of the collateral or the amount of the guarantee in relation to the credit-equivalent amount. Collateral and guarantees are subject to the same provisions noted under section III.B. of appendix A of Regulation Y.

indexes traded on exchanges that require daily payment of variation margin are excluded from the risk-based capital calculation. Such a margining arrangement requires the marking to market of contracts and the settling of the resulting gains and losses in cash on a daily basis.

4060.3.5.3.15 Netting of Swaps and Similar Contracts

Netting refers to the offsetting of positive and negative mark-to-market values in the determination of a current exposure to be used in the calculation of a credit-equivalent amount. Any legally enforceable form of bilateral netting (that is, netting with a single counterparty) of derivative contracts is recognized for purposes of calculating the credit-equivalent amount provided that—

1. the netting is accomplished under a written netting contract that creates a single legal obligation, covering all included individual contracts, with the effect that the organization would have a claim to receive, or an obligation to receive or pay, only the net amount of the sum of the positive and negative mark-to-market values on included individual contracts in the event that a counterparty, or a counterparty to whom the contract has been validly assigned, fails to perform due to default, insolvency, liquidation, or similar circumstances;
2. the banking organization obtains written and reasoned legal opinions that in the event of a legal challenge—including one resulting from default, insolvency, liquidation, or similar circumstances—the relevant court and administrative authorities would find the banking organization's exposure to be such a net amount under—
   a. the law of the jurisdiction in which the counterparty is chartered or the equivalent location in the case of noncorporate entities, and if a branch of the counterparty is involved, then also under the law of the jurisdiction in which the branch is located;
   b. the law that governs the individual contracts covered by the netting contract; and
   c. the law that governs the netting contract;
3. the banking organization establishes and maintains procedures to ensure that the legal characteristics of netting contracts are kept under review in light of possible changes in relevant law; and
4. the banking organization maintains in its files documentation adequate to support the netting of rate contracts, including a copy of the bilateral netting contract and necessary legal opinions.

A contract containing a walkaway clause is not eligible for netting for purposes of calculating the credit-equivalent amount.[43]

By netting individual contracts for the purpose of calculating credit-equivalent amounts of derivative contracts, a banking organization represents that it has met the requirements of the risk-based measure of the capital adequacy guidelines for BHCs and that all the appropriate documents are in the organization's files and available for inspection by the Federal Reserve. The Federal Reserve may determine that a banking organization's files are inadequate or that a netting contract, or any of its underlying individual contracts, may not be legally enforceable. If such a determination is made, the netting contract may be disqualified from recognition for risk-based capital purposes, or underlying individual contracts may be treated as though they are not subject to the netting contract.

The credit-equivalent amount of contracts that are subject to a qualifying bilateral netting contract is calculated by adding—

1. the current exposure of the netting contract (net current exposure) and
2. the sum of the estimates of the potential future credit exposures on all individual contracts subject to the netting contract (gross potential future exposure) adjusted to reflect the effects of the netting contract.[44]

The net current exposure of the netting contract is determined by summing all positive and negative mark-to-market values of the individual contracts included in the netting contract. If the net sum of the mark-to-market values is positive, then the current exposure of the netting

43. A walkaway clause is a provision in a netting contract that permits a nondefaulting counterparty to make lower payments than it would make otherwise under the contract, or no payment at all, to a defaulter or to the estate of a defaulter, even if the defaulter or the estate of the defaulter is a net creditor under the contract.

44. For purposes of calculating potential future credit exposure to a netting counterparty for foreign-exchange contracts and other similar contracts in which notional principal is equivalent to cash flows, total notional principal is defined as the net receipts falling due on each value date in each currency.

contract is equal to that sum. If the net sum of the mark-to-market values is zero or negative, then the current exposure of the netting contract is zero. The Federal Reserve may determine that a netting contract qualifies for risk-based capital netting treatment even though certain individual contracts may not qualify. In such instances, the nonqualifying contracts should be treated as individual contracts that are not subject to the netting contract.

Gross potential future exposure or A_{gross} is calculated by summing the estimates of potential future exposure (determined in accordance with subsection 4060.3.5.3.4.1) for each individual contract subject to the qualifying bilateral netting contract.

The effects of the bilateral netting contract on the gross potential future exposure are recognized through the application of a formula that results in an adjusted add-on amount (A_{net}). The formula, which employs the ratio of net current exposure to gross current exposure (NGR), is expressed as:

$$A_{net} = (0.4 \times A_{gross}) + 0.6(NGR \times A_{gross})$$

The NGR may be calculated in accordance with either the counterparty-by-counterparty approach or the aggregate approach.

Under the counterparty-by-counterparty approach, the NGR is the ratio of the net current exposure for a netting contract to the gross current exposure of the netting contract. The gross current exposure is the sum of the current exposures of all individual contracts subject to the netting contract calculated in accordance with subsection 4060.3.5.3.4.1. Net negative mark-to-market values for individual netting contracts with the same counterparty may not be used to offset net positive mark-to-market values for other netting contracts with the same counterparty.

Under the aggregate approach, the NGR is the ratio of the sum of all the net current exposures for qualifying bilateral netting contracts to the sum of all the gross current exposures for those netting contracts (each gross current exposure is calculated in the same manner as in subsection 4060.3.5.3.6 (counterparty-by-counterparty approach)). Net negative mark-to-market values for individual counterparties may not be used to offset net positive current exposures for other counterparties.

A banking organization must consistently use either the counterparty-by-counterparty approach or the aggregate approach to calculate the NGR. Regardless of the approach used, the NGR should be applied individually to each qualifying bilateral netting contract to determine the adjusted add-on for that netting contract.

In the event a netting contract covers contracts that are normally excluded from the risk-based ratio calculation—for example, exchange-rate contracts with an original maturity of 14 or fewer calendar days or instruments traded on exchanges that require daily payment of cash-variation margin—an institution may elect to either include or exclude all mark-to-market values of such contracts when determining net current exposure, provided the method chosen is applied consistently.

Examiners are to review the netting of off-balance-sheet derivative contractual arrangements used by banking organizations when calculating or verifying risk-based capital ratios to ensure that the positions of such contracts are reported gross unless the net positions of those contracts reflect netting arrangements that comply with the netting requirements listed previously.

4060.3.5.3.16 Financial Standby Letters of Credit and Performance Standby Letters of Credit

The determining characteristic of whether a standby letter of credit is financial or performance is the contractual obligation that triggers payment. If the event that triggers payment is financial, such as a failure to pay money, the standby letter of credit should be classified as financial. If the event that triggers payment is performance-related, such as a failure to ship a product or provide a service, the standby letter of credit should be classified as performance. The vast majority of standby letters of credit a bank issues are considered, for risk-based capital purposes, to be financial standby letters of credit. (See SR-95-20 (SUP).)

4060.3.5.3.16.1 Financial Standby Letters of Credit

The risk-based capital guidelines describe a financial standby letter of credit as an irrevocable undertaking by a banking organization to guarantee repayment of a financial obligation. Such a guarantee is considered a direct-credit substitute and is converted to an on-balance-sheet credit-equivalent amount at 100 percent.

The resulting credit-equivalent amount is then risk-weighted according to the type of counterparty or, if relevant, to any guarantee or collateral.

Financial standby letters of credit have a higher conversion factor than performance standby letters of credit. This is primarily because, unlike performance standby letters of credit, financial standby letters of credit tend to be drawn down only when the account party's financial condition has deteriorated.

A standby letter of credit guaranteeing the performance of a contractual obligation to pay money is viewed as a financial letter of credit. For example, a standby letter of credit backing a purchaser's contractual obligation to pay for delivered goods is a financial guarantee backing the purchaser's credit standing for the sale. It would not be viewed as a performance letter of credit guaranteeing the purchaser's performance to make payment under the contract.

A failure to perform a contractual obligation involving the payment of money can arise in a variety of situations, for example, failure to pay insurance premiums or deductibles, failure to pay insurance claims, failure to pay workers' compensation obligations, or failure to pay for (or arrange) cleanup in the event the account party's operations cause environmental damage. In each instance, the triggering event is the failure to pay money under a contractual obligation. A standby letter of credit guaranteeing payment in the event the account party fails to perform any of these contractual financial obligations or other circumstances should be treated as a financial standby letter of credit and converted to an on-balance-sheet credit-equivalent amount at 100 percent.

4060.3.5.3.16.2 Performance Standby Letters of Credit

A performance standby letter of credit is an irrevocable undertaking by the organization to make payment in the event the customer fails to perform a nonfinancial contractual obligation. This type of letter of credit is considered a transaction-related contingency and is converted to an on-balance-sheet credit-equivalent amount at 50 percent. The resulting credit-equivalent amount is then risk-weighted according to the type of counterparty or, if relevant, to any guarantee or collateral.

4060.3.5.3.17 Credit Derivatives

For purposes of risk-based capital, credit derivatives generally are to be treated as off-balance-sheet direct-credit substitutes. They are arrangements that allow one party (the beneficiary) to transfer the credit risk of a "reference asset," which it often actually owns, to another party (the guarantor).[45] The notional amount of the contract should be converted at 100 percent to determine the credit-equivalent amount to be included in risk-weighted assets of the guarantor.[46] A banking organization providing a guarantee through a credit-derivative transaction should assign its credit exposure to the risk category appropriate to the obligor of the reference asset or any collateral. On the other hand, a banking organization that owns the underlying asset upon which effective credit protection has been acquired through a credit derivative may under certain circumstances assign the unamortized portion of the underlying asset to the risk category appropriate to the guarantor (for example, to the 20 percent risk category if the guarantor is a bank or, if a bank holding company, to the 100 percent risk-weight category).

Whether the credit derivative is considered an eligible guarantee for purposes of risk-based capital depends on the *degree of credit protection* actually provided, which may be limited depending on the terms of the arrangement. For example, a relatively restrictive definition of a default event or a materiality threshold that requires a comparably high percentage of loss to occur before the guarantor is obliged to pay could effectively limit the amount of credit risk actually transferred in the transaction. If the terms of the credit-derivative arrangement significantly limit the degree of risk transference, then the beneficiary bank cannot reduce the risk weight of the "protected" asset to that of the guarantor. On the other hand, even if the transfer of credit risk is limited, a banking organization providing limited credit protection through a credit derivative should hold appropriate capital against the underlying exposure while the organization is exposed to the credit risk of the reference asset.

45. Credit derivatives that are held in a banking organization's (a bank's or bank holding company's) trading account are subject to the market-risk rules.

46. Guarantor banks or bank holding companies that have made cash payments representing depreciation on reference assets may deduct such payments from the notional amount when computing credit-equivalent amounts for capital purposes. For example, if a guarantor bank or bank holding company makes a depreciation payment of $10 on a $100 notional total-rate-of-return swap, the credit-equivalent amount would be $90.

Banking organizations providing a guarantee through a credit derivative may mitigate the credit risk associated with the transaction by entering into an offsetting credit derivative with another counterparty, a so-called ''back-to-back'' position. Organizations that have entered into such a position may treat the first credit derivative as guaranteed by the offsetting transaction for risk-based capital purposes. Accordingly, the notional amount of the first credit derivative may be assigned to the risk category appropriate to the counterparty providing credit protection through the offsetting credit-derivative arrangement (for example, to the 20 percent risk category if the counterparty is an OECD bank).

In some instances, the reference asset in the credit-derivative transaction may not be identical to the underlying asset for which the beneficiary has acquired credit protection. For example, a credit derivative used to offset the credit exposure of a loan to a corporate customer may use a publicly traded corporate bond of the customer as the reference asset, whose credit quality serves as a proxy for the on-balance-sheet loan. In such a case, the underlying asset will still generally be considered guaranteed for capital purposes as long as both the underlying asset and the reference asset are obligations of the same legal entity and have the same level of seniority in bankruptcy. In addition, banking organizations offsetting credit exposure in this manner would be obligated to demonstrate to examiners that there is a high degree of correlation between the two instruments; the reference instrument is a reasonable and sufficiently liquid proxy for the underlying asset so that the instruments can be reasonably expected to behave similarly in the event of default; and, at a minimum, the reference asset and underlying asset are subject to mutual cross-default provisions. A banking organization that uses a credit derivative, which is based on a reference asset that differs from the protected underlying asset, must document the credit derivative being used to offset credit risk and must link it directly to the asset or assets whose credit risk the transaction is designed to offset. The documentation and the effectiveness of the credit-derivative transaction are subject to examiner review. Banking organizations providing credit protection through such arrangements must hold capital against the risk exposures that are assumed.

4060.3.5.3.18 Credit Derivatives Used to Synthetically Replicate Collateralized Loan Obligations

Credit derivatives can be used to synthetically replicate collateralized loan obligations (CLOs). Banking organizations (BOs) can use CLOs and their synthetic variants to manage their balance sheets and, in some instances, transfer credit risk to the capital markets. Such transactions allow economic capital to be more efficiently allocated, resulting in, among other things, improved shareholders' returns. Supervisors and examiners need to fully understand these complex structures, and identify the relative degree of transference and retention of the securitized portfolio's credit risk. They must also determine whether the BO's regulatory risk-based and leverage capital is adequate given the retained credit exposures.[47]

A CLO is an asset-backed security that is usually supported by a variety of assets, including whole commercial loans, revolving credit facilities, letters of credit, banker's acceptances, or other asset-backed securities. In a typical CLO transaction, the sponsoring banking organization (SBO) transfers the loans and other assets to a bankruptcy-remote special-purpose vehicle (SPV), which then issues asset-backed securities consisting of one or more classes of debt. This type of transaction represents a so-called cash-flow CLO that enables the SBO to reduce its leverage and risk-based capital requirements, improve its liquidity, and manage credit concentrations.

The first synthetic CLO (issued in 1997) used credit-linked notes (CLNs).[48] Rather than transferring assets to the SPV, the sponsoring bank issued CLNs to the SPV, individually referencing the payment obligation of a particular company or ''reference obligor.'' The notional amount of the CLNs issued equaled the dollar amount of the reference assets the sponsor was hedging on its balance sheet. Other structures have evolved that use credit-default swaps to transfer credit risk and create different levels of risk exposure, but that hedge only a portion of the notional amount of the overall reference portfolio.[49]

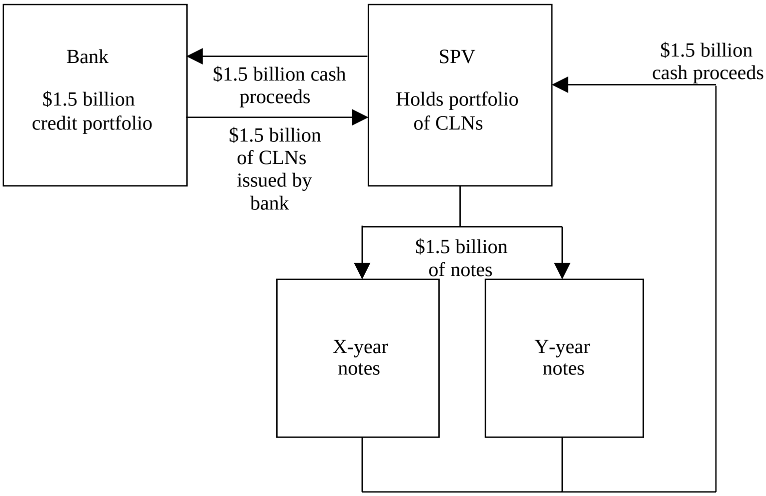
---

47. See SR-99-32 and its attached November 15, 1999, FRB-OCC capital interpretation on synthetic collateralized loan obligations.

48. CLNs are obligations whose principal repayment is conditioned upon the performance of a referenced asset or portfolio. The assets' performance may be based on a variety of measures, such as movements in price or credit spread, or the occurrence of default.

49. A credit-default swap is similar to a financial standby letter of credit in that the BO writing the swap provides, for a fee, credit protection against credit losses associated with a

Figure 1—Transaction 1



Traditional CLO structures usually transfer assets into the SPV. In synthetic securitizations, the underlying exposures that make up the reference portfolio remain in the BO's banking book.[50] The credit risk is transferred into the SPV through credit-default swaps or CLNs. The BO is thus able to maintain client confidentiality and avoid sensitive client-relationship issues that arise from loan-transfer-notification requirements, loan-assignment provisions, and loan-participation restrictions

Corporate credits are assigned to the 100 percent risk-weighted asset category for risk-based capital calculation purposes. In the case of high-quality, investment-grade corporate exposures, the associated 8 percent capital requirement may exceed the economic capital that the SBO sets aside to cover the credit risk of the transaction. Therefore, one of the apparent motivations behind CLOs and other securitizations is to more closely align the SBO's regulatory capital requirements with the economic capital required by the market.

Synthetic CLOs can raise questions about their capital treatment when calculating the risk-based and leverage capital ratios. Capital treatments for three synthetic transactions follow. They are discussed from the perspective of the investors and the SBOs.

default on a specified reference asset or pool of assets.

50. "Banking book" refers to nontrading accounts. See the "trading account" definition in the Glossary for the instructions to the Consolidated Financial Statements for Bank Holding Companies, FR Y-9C.

4060.3.5.3.18.1 Transaction 1—Entire Notional Amount of the Reference Portfolio Is Hedged

In the first type of synthetic securitization, the SBO, through a synthetic CLO, hedges the entire notional amount of a reference asset portfolio. An SPV acquires the credit risk on a reference portfolio by purchasing CLNs issued by the SBO. The SPV funds the purchase of the CLNs by issuing a series of notes in several tranches to third-party investors. The investor notes are in effect collateralized by the CLNs. Each CLN represents one obligor and the BO's credit-risk exposure to that obligor, which could take the form of bonds, commitments, loans, and counterparty exposures. Since the noteholders are exposed to the full amount of credit risk associated with the individual reference obligors, all of the credit risk of the reference portfolio is shifted from the SBO to the capital markets. The dollar amount of notes issued to investors equals the notional amount of the reference portfolio. In the example shown in figure 1, this amount is $1.5 billion.

If the obligor linked to a CLN in the SPV defaults, the SBO will call the individual CLN and redeem it based on the repayment terms specified in the note agreement. The term of each CLN is set so that the credit exposure (to which it is linked) matures before the maturity of the CLN, which ensures that the CLN will be in place for the full term of the exposure to which it is linked.

An investor in the notes issued by the SPV is exposed to the risk of default of the underlying reference assets, as well as to the risk that the SBO will not repay principal at the maturity of the notes. Because of the linkage between the credit quality of the SBO and the issued notes, a downgrade of the sponsor's credit rating most likely will result in the notes also being downgraded. Thus, a BO investing in this type of synthetic CLO should assign the notes to the higher of the risk categories appropriate to the underlying reference assets or the issuing entity.

For purposes of risk-based capital, the SBOs may treat the cash proceeds from the sale of CLNs that provide protection against underlying reference assets as cash collateralizing these assets.[51] This treatment would permit the reference assets, if carried on the SBO's books, to be assigned to the zero percent risk category to the extent that their notional amount is fully collateralized by cash. This treatment may be applied even if the cash collateral is transferred directly into the general operating funds of the BO and is not deposited in a segregated account. The synthetic CLO would not confer any benefits to the SBO for purposes of calculating its tier 1 leverage ratio, however, because the reference assets remain on the organization's balance sheet.

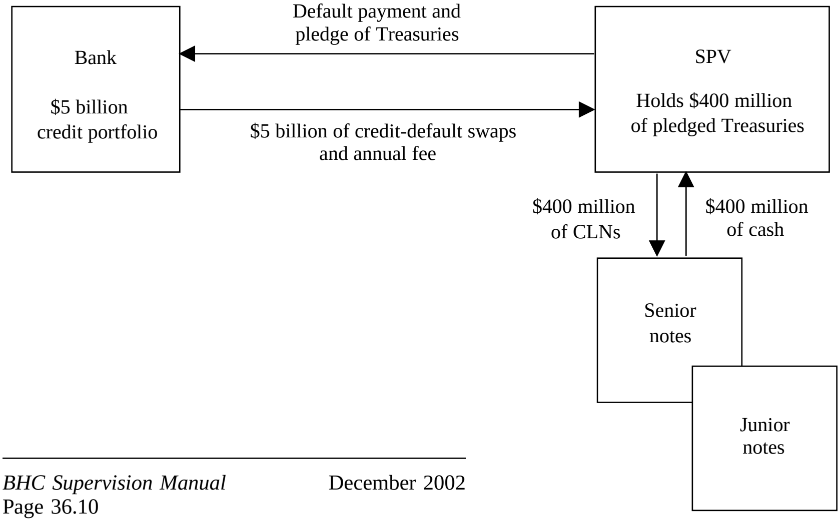
51. The CLNs should not contain terms that would significantly limit the credit protection provided against the underlying reference assets, for example, a materiality threshold that requires a relatively high percentage of loss to occur before CLN payments are adversely affected, or a structuring of CLN post-default payments that does not adequately pass through credit-related losses on the reference assets to investors in the CLNs.

4060.3.5.3.18.2 Transaction 2—High-Quality, Senior Risk Position in the Reference Portfolio Is Retained

In the second type of synthetic CLO transaction, the SBO hedges a portion of the reference portfolio and retains a high-quality, senior risk position that absorbs only those credit losses in excess of the junior-loss positions. For some noted synthetic CLOs, the SBO used a combination of credit-default swaps and CLNs to transfer to the capital markets the credit risk of a designated portfolio of the organization's credit exposures. Such a transaction allows the SBO to allocate economic capital more efficiently and to significantly reduce its regulatory capital requirements.

In the structure illustrated in figure 2, the SBO purchases default protection from an SPV for a specifically identified portfolio of banking-book credit exposures, which may include letters of credit and loan commitments. The credit risk on the identified reference portfolio (which continues to remain in the sponsor's banking book) is transferred to the SPV through the use of credit-default swaps. In exchange for the credit protection, the SBO pays the SPV an annual fee. The default swaps on each of the

Figure 2—Transaction 2



obligors in the reference portfolio are structured to pay the average default losses on all senior unsecured obligations of defaulted borrowers. To support its guarantee, the SPV sells CLNs to investors and uses the cash proceeds to purchase U.S. government Treasury notes. The SPV then pledges the Treasuries to the SBO to cover any default losses.[52] The CLNs are often issued in multiple tranches of differing seniority and in an aggregate amount that is significantly less than the notional amount of the reference portfolio. The amount of notes issued typically is set at a level sufficient to cover some multiple of expected losses, but well below the notional amount of the reference portfolio being hedged.

There may be several levels of loss in this type of synthetic securitization. The first-loss position may consist of a small cash reserve, sufficient to cover expected losses. The cash reserve accumulates over a period of years and is funded from the excess of the SPV's income (that is, the yield on the Treasury securities plus the credit-default-swap fee) over the interest paid to investors on the notes. The investors in the SPV assume a second-loss position through their investment in the SPV's senior and junior notes, which tend to be rated AAA and BB, respectively. Finally, the SBO retains a high-quality, senior risk position that would absorb any credit losses in the reference portfolio that exceed the first- and second-loss positions.

Typically, no default payments are made until the maturity of the overall transaction, regardless of when a reference obligor defaults. While operationally important to the SBO, this feature has the effect of ignoring the time value of money. Thus, the Federal Reserve expects that when the reference obligor defaults under the terms of the credit derivative and when the reference asset falls significantly in value, the SBO should, in accordance with generally accepted accounting principles, make appropriate adjustments in its regulatory reports to reflect the estimated loss that takes into account the time value of money.

For risk-based capital purposes, the BOs investing in the notes must assign them to the risk weight appropriate to the underlying reference assets.[53] The SBO must include in its risk-weighted assets its retained senior exposure in the reference portfolio, to the extent these underlying assets are held in its banking book. The portion of the reference portfolio that is collateralized by the pledged Treasury securities may be assigned a zero percent risk weight. Unless the SBO meets the stringent minimum conditions for transaction 2 outlined in the subsection ''Minimum Conditions,'' the remainder of the portfolio should be risk-weighted according to the obligor of the exposures.

When the SBO has virtually eliminated its credit-risk exposure to the reference portfolio through the issuance of CLNs, and when the other minimum requirements are met, the SBO may assign the uncollateralized portion of its retained senior position in the reference portfolio to the 20 percent risk weight. However, to the extent that the reference portfolio includes loans and other on-balance-sheet assets, the SBO would not realize any benefits in the determination of its leverage ratio.

In addition to the three stringent minimum conditions, the Federal Reserve may impose other requirements, as it deems necessary to ensure that an SBO has virtually eliminated all of its credit exposure. Furthermore, the Federal Reserve retains the discretion to increase the risk-based capital requirement assessed against the retained senior exposure in these structures, if the underlying asset pool deteriorates significantly.

Federal Reserve staff will make a case-by-case determination, based on a qualitative review, as to whether the senior retained portion of an SBO's synthetic securitization qualifies for the 20 percent risk weight. The SBO must be able to demonstrate that virtually all the credit risk of the reference portfolio has been transferred from the banking book to the capital markets. As they do when BOs are engaging in more traditional securitization activities, examiners must carefully evaluate whether the SBO is fully capable of assessing the credit risk it retains in its banking book and whether it is adequately capitalized given its residual risk exposure. The Federal Reserve will require the SBO to maintain higher levels of capital if it is not deemed to be adequately capitalized given the retained residual risks. In addition, an SBO involved in synthetic securitizations must adequately disclose to the marketplace the effect of its transactions on its risk profile and capital adequacy.

The Federal Reserve may consider an SBO's failure to require the investors in the CLNs to absorb the credit losses that they contractually agreed to assume an unsafe and unsound bank-

52. The names of corporate obligors included in the reference portfolio may be disclosed to investors in the CLNs.

53. Under this type of transaction, if a structure exposes investing BOs to the creditworthiness of a substantive issuer, for example, the SBO, then the investing BOs should assign the notes to the higher of the risk categories appropriate to the underlying reference assets or the SBO.

ing practice. In addition, such a failure generally would constitute ''implicit recourse'' or support to the transaction, which result in the SBO's losing preferential capital treatment on its retained senior position.

If an SBO of a synthetic securitization does not meet the stringent minimum conditions, it may still reduce the risk-based capital requirement on the senior risk position retained in the banking book by transferring the remaining credit risk to a third-party OECD bank through the use of a credit derivative. Provided the credit-derivative transaction qualifies as a guarantee under the risk-based capital guidelines, the risk weight on the senior position may be reduced from 100 percent to 20 percent. SBOs may not enter into nonsubstantive transactions that transfer banking-book items into the trading account to obtain lower regulatory capital requirements.[54]

4060.3.5.3.18.3 Minimum Conditions

The following stringent minimum conditions are those that the SBOs must meet to use the synthetic securitization capital treatment for transaction 2. The Federal Reserve may impose additional requirements or conditions as deemed necessary to ascertain that an SBO has sufficiently isolated itself from the credit-risk exposure of the hedged reference portfolio.

Condition 1—Demonstration of transfer of virtually all the risk to third parties. Not all transactions structured as synthetic securitizations transfer the level of credit risk needed to receive the 20 percent risk weight on the retained senior position. To demonstrate that a transfer of virtually all of the risk has been achieved, SBOs must—

1. produce credible analyses indicating a transfer of virtually all the credit risk to substantive third parties;
2. ensure the absence of any early-amortization or other credit performance–contingent clauses;[55]
3. subject the transaction to market discipline through the issuance of a substantive amount of notes or securities to the capital markets;
4. have notes or securities rated by a nationally recognized credit rating agency;
5. structure a senior class of notes that receives the highest possible investment-grade rating, for example, AAA, from a nationally recognized credit rating agency;
6. ensure that any first-loss position retained by the SBO in the form of fees, reserves, or other credit enhancement—which effectively must be deducted from capital—is no greater than a reasonable estimate of expected losses on the reference portfolio; and
7. ensure that the SBO does not reassume any credit risk beyond the first-loss position through another credit derivative or any other means.

Condition 2—Demonstration of ability to evaluate remaining banking-book risk exposures and provide adequate capital support. To ensure that the SBO has adequate capital for the credit risk of its unhedged exposures, it is expected to have adequate systems that fully account for the effect of these transactions on its risk profiles and capital adequacy. In particular, the SBO's systems should be capable of fully differentiating the nature and quality of the risk exposures it transfers from the nature and quality of the risk exposures it retains. Specifically, to gain capital relief SBOs are expected to—

1. have a credible internal process for grading credit-risk exposures, including the following:
   a. adequate differentiation of risk among risk grades
   b. adequate controls to ensure the objectivity and consistency of the rating process
   c. analysis or evidence supporting the accuracy or appropriateness of the risk-grading system;
2. have a credible internal economic capital-assessment process that defines the SBO to be adequately capitalized at an appropriate insolvency probability and that readjusts, as necessary, its internal economic capital requirements to take into account the effect of the synthetic securitization transaction. In

54. For instance, a lower risk weight would not be applied to a nonsubstantive transaction in which the SBO (1) enters into a credit-derivative transaction to pass the credit risk of the senior retained portion held in its banking book to an OECD bank, and then (2) enters into a second credit-derivative transaction with the same OECD bank, in which it reassumes into its trading account the credit risk initially transferred.

55. Early-amortization clauses may generally be defined as features that are designed to force a wind-down of a securitization program and rapid repayment of principal to asset-backed securities investors if the credit quality of the underlying asset pool deteriorates significantly.

addition, the process should employ a sufficiently long time horizon to allow necessary adjustments in the event of significant losses. The results of an exercise demonstrating that the organization is adequately capitalized after the securitization transaction must be presented for examiner review;

3. evaluate the effect of the transaction on the nature and distribution of the nontransferred banking-book exposures. This analysis should include a comparison of the banking book's risk profile and economic capital requirements before and after the transaction, including the mix of exposures by risk grade and by business or economic sector. The analysis should also identify any concentrations of credit risk and maturity mismatches. Additionally, the SBO must adequately manage and control the forward credit exposure that arises from any maturity mismatch. The Federal Reserve retains the flexibility to require additional regulatory capital if the maturity mismatches are substantive enough to raise a supervisory concern. Moreover, as stated above, the SBO must demonstrate that it meets its internal economic capital requirement subsequent to the completion of the synthetic securitization; and
4. perform rigorous and robust forward-looking stress testing on nontransferred exposures (remaining banking-book loans and commitments), transferred exposures, and exposures retained to facilitate transfers (credit enhancements). The stress tests must demonstrate that the level of credit enhancement is sufficient to protect the SBO from losses under scenarios appropriate to the specific transaction.

Condition 3—Provide adequate public disclosures of synthetic CLO transactions regarding their risk profile and capital adequacy. In their 10-K and annual reports, SBOs must adequately disclose to the marketplace the accounting, economic, and regulatory consequences of synthetic CLO transactions. In particular, SBOs are expected to disclose—

1. the notional amount of loans and commitments involved in the transaction;
2. the amount of economic capital shed through the transaction;
3. the amount of reduction in risk-weighted assets and regulatory capital resulting from the transaction, both in dollar terms and in terms of the effect in basis points on the risk-based capital ratios; and
4. the effect of the transaction on the distribution and concentration of risk in the retained portfolio by risk grade and sector.

4060.3.5.3.18.4 Transaction 3—First-Loss Position Is Retained

In the third type of synthetic transaction, the SBO may retain a subordinated position that absorbs the credit risk associated with a first loss in a reference portfolio. Furthermore, through the use of credit-default swaps, the SBO may pass the second- and senior-loss positions to a third-party entity, most often an OECD bank. The third-party entity, acting as an intermediary, enters into offsetting credit-default swaps with an SPV, thus transferring its credit risk associated with the second-loss position to the SPV.[56] The SPV then issues CLNs to the capital markets for a portion of the reference portfolio and purchases Treasury collateral to cover some multiple of expected losses on the underlying exposures.

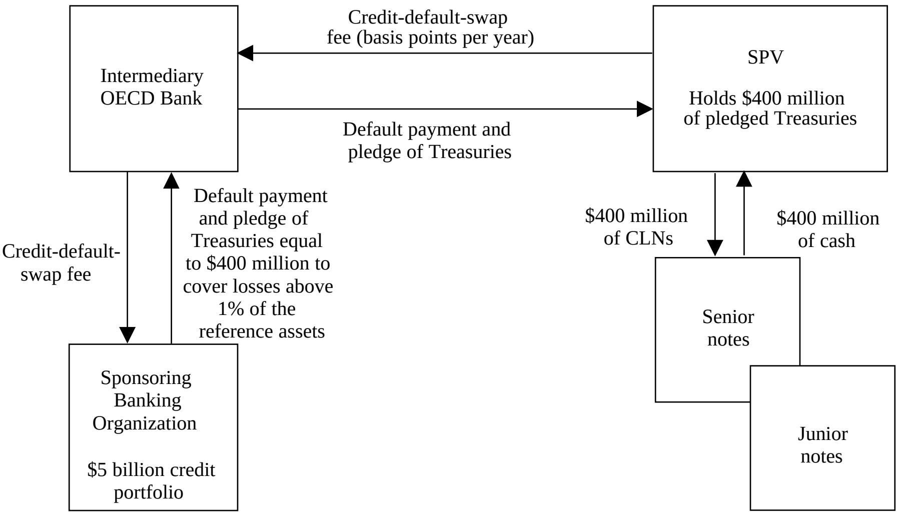
Two alternative approaches could be used to determine how the SBO should treat the overall transaction for risk-based capital purposes. The first approach employs an analogy to the low-level capital rule for assets sold with recourse. Under this rule, a transfer of assets with recourse that contractually is limited to an amount less than the effective risk-based capital requirements for the transferred assets is assessed a total capital charge equal to the maximum amount of loss possible under the recourse obligation. If this rule applied to an SBO retaining a 1 percent first-loss position on a synthetically securitized portfolio that would otherwise be assessed 8 percent capital, the SBO would be required to hold dollar-for-dollar capital against the 1 percent first-loss risk position. The SBO would not be assessed a capital charge against the second- and senior-risk positions.[57]

The second approach employs a literal reading of the capital guidelines to determine the SBO's risk-based capital charge. In this instance, the 1 percent first-loss position retained by the SBO would be treated as a guarantee, that is, a direct-credit substitute, which would be assessed

56. Because the credit risk of the senior position is not transferred to the capital markets but remains with the intermediary bank, the SBO should ensure that its counterparty is of high credit quality, for example, at least investment grade.

57. The SBO would not realize any benefits in the determination of its leverage ratio since the reference assets remain on the SBO's balance sheet.

Figure 3—Transaction 3



an 8 percent capital charge against its face value of 1 percent. The second-loss position, which is collateralized by Treasury securities, would be viewed as fully collateralized and subject to a zero percent capital charge. The senior-loss position guaranteed by the intermediary bank would be assigned to the 20 percent risk category appropriate to claims guaranteed by OECD banks.[58]

The second approach may result in a higher risk-based capital requirement than the dollar-for-dollar capital charge imposed by the first approach, depending on whether the reference portfolio consists primarily of loans to private obligors or undrawn long-term commitments. The latter generally have an effective risk-based capital requirement one-half of the requirement for loans because these commitments are converted to an on-balance-sheet credit-equivalent amount using the 50 percent conversion factor. If the reference pool consists primarily of drawn loans to private obligors, then the capital requirement on the senior-loss position would be significantly higher than if the reference portfolio contained only undrawn long-term commitments. As a result, the capital charge for the overall transaction could be greater than the dollar-for-dollar capital requirement set forth in the first approach.

SBOs will be required to hold capital against a retained first-loss position in a synthetic securitization equal to the higher of the two capital charges resulting from application of the first and second approaches, as discussed above. Further, although the SBO retains only the credit risk associated with the first-loss position, it still should continue to monitor all the underlying credit exposures of the reference portfolio to detect any changes in the credit-risk profile of the counterparties. This is important to ensure that the SBO has adequate capital to protect against unexpected losses. Examiners should determine whether the SBO has the capability to assess and manage the retained risk in its credit portfolio after the synthetic securitization is completed. For risk-based capital purposes, BOs investing in the notes must assign them to the risk weight appropriate to the underlying reference assets.[59]

58. If the intermediary is a BO, then it could place both sets of credit-default swaps in its trading account and, if subject to the Federal Reserve's market-risk capital rules, use its general market-risk model and, if approved, specific-risk model to calculate the appropriate risk-based capital requirement. If the specific-risk model has not been approved, then the SBO would be subject to the standardized specific-risk capital charge.

59. Under this type of transaction, if a structure exposes investing BOs to the creditworthiness of a substantive issuer, for example, the SBO, then the investing BOs should assign the notes to the higher of the risk categories appropriate to the underlying reference assets or the SBO.

4060.3.5.3.19 Reservation of Authority

The Federal Reserve reserves its authority to determine, on a case-by-case basis, the appropriate risk weight for assets and credit-equivalent amounts and the appropriate credit-conversion factor for off-balance-sheet items. The Federal Reserve's exercise of this authority may result in a higher or lower risk weight for an asset or credit-equivalent amount, or in a higher or lower credit-conversion factor for an off-balance-sheet item. This reservation of authority explicitly recognizes that the Federal Reserve retains sufficient discretion to ensure that bank holding companies, as they develop novel financial assets, will be treated appropriately under the regulatory capital standards. Under this authority, the Federal Reserve reserves its right to assign risk positions in securitizations to appropriate risk categories on a case-by-case basis, if the credit rating of the risk position is determined to be inappropriate.

4060.3.5.4 Considerations in the Overall Assessment of Capital Adequacy

Examiners are to take into account the following factors when assessing the overall capital adequacy of banking organizations.

4060.3.5.4.1 Unrealized Asset Values

Banking organizations often have assets on their books that are carried at significant discounts below current market values. This difference between book value (historical cost or acquisition value) and market value of any asset, particularly for banking premises, may represent potential capital to the banking organization. These "unrealized asset values" *are not included* in the risk-based capital calculation. Examiners should take into consideration such unrecognized capital when assessing capital adequacy. Particular attention should be given to the nature of the asset, the reasonableness of its valuation, its marketability, and the likelihood of its sale.

4060.3.5.4.2 Subordinated Debt

To be included in tier 2 capital, subordinated debt must be subordinated in right of payment to the claims of the issuer's general creditors. For bank holding companies, such debt must be subordinated to senior indebtedness. To meet this requirement, bank holding company debt must, at a minimum, be subordinated to (1) all borrowed and purchased money, (2) similar obligations arising from off-balance-sheet guarantees and direct-credit substitutes, and (3) obligations associated with derivative products such as interest-rate and foreign-exchange-rate contracts, commodity contracts, and similar arrangements. (See SR-92-37.)

Subordinated debt (and intermediate-term preferred stock) must have an original weighted average maturity of at least five years to qualify as supplementary capital. The average maturity of an obligation whose principal is repayable in scheduled periodic payments (for example, a so-called serial redemption issue) is the weighted average of the maturities of all such scheduled repayments. If the holder has the option to require the issuer to redeem, repay, or repurchase the instrument before the original stated maturity, maturity is defined as the earliest possible date on which the holder can put the instrument back to the issuing banking organization. This date may be much earlier than the instrument's stated maturity date. The outstanding amount includable in tier 2 capital must be discounted by 20 percent a year (20 percent of the original amount less any redemptions) during the instrument's last five years before maturity. The aggregate amount of subordinated debt and intermediate-term preferred stock that may be included in tier 2 capital is limited to 50 percent of tier 1 capital (net of goodwill and other intangible assets required to be deducted in accordance with section II.B.1.b. of the risk-based capital measure). Amounts issued or outstanding in excess of this limit are not included in the risk-based capital calculation. However, examiners are to take any excess amount not included in the risk-based capital calculation into consideration when assessing the banking organization's funding and financial condition.

A state member bank may not repay, redeem, or repurchase a subordinated debt issue without the Federal Reserve's prior written approval. Prior written approval is not required for BHCs. They should consult with the Federal Reserve before redeeming subordinated debt. (See 12 C.F.R. 250.166(f)(2).)

Close scrutiny should be given to terms that permit the holder to accelerate payment of principal upon the occurrence of certain events. The only acceleration clauses acceptable in a subordinated debt issue included in tier 2 capital are those that are triggered by bankruptcy (in the case of a bank holding company) or receivership (in the case of a bank.)[60] (See SR-92-37.) Terms that permit the holder to accelerate payment of principal upon the occurrence of other events jeopardize the subordination of the debt because such terms could permit debtholders in a troubled institution to be paid out before the depositors. In addition, debt whose terms permit holders to accelerate payment of principal upon the occurrence of events other than insolvency does not meet the minimum five-year maturity requirement for debt capital instruments. Holders of such debt have the right to put the debt back to the issuer upon the occurrence of the named events, which could happen on a date well in advance of the debt's stated maturity.

Close scrutiny should also be given to the terms of those debt issues if an event of default is defined more broadly than insolvency or a failure to pay interest or principal when due. There is a strong possibility that such terms are inconsistent with safe and sound banking practice and that, accordingly, the debt issue should not be included in capital. Concern is heightened when an event of default gives the holder the right to accelerate payment of principal or when other borrowings contain cross-default clauses. Some events of default, such as making additional borrowings in excess of a certain amount, may unduly restrict the day-to-day operations. Other events of default, such as change of control or disposal of a banking organization subsidiary, may limit the flexibility of management or supervisors to work out the problems of a troubled organization. Still other events of default, such as failure to maintain certain capital ratios or rates of return or to limit the amount of nonperforming assets or charge-offs to a certain level, may be intended to allow the debtholder to be made whole before a deteriorating banking organization becomes truly troubled. Debt issues that include any of these types of events of default are not truly subordinated and should not be included in capital. Likewise, bank holding companies should not include in capital debt issues that otherwise contain terms or covenants that could adversely affect the issuer's liquidity; unduly restrict management's flexibility to run the organization, particularly in times of financial difficulty; or limit the regulator's ability to resolve problem situations.

Certain terms found in subordinated debt, however, may provide protection to investors without adversely affecting the overall benefits of the instrument to the organization, and thus would be acceptable for subordinated debt to be included in capital. Among such acceptable terms would be a provision that prohibits a bank holding company from merging, consolidating, or selling substantially all of its assets unless the new entity assumes the subordinated debt. Another acceptable provision would be the inclusion as an event of default of the failure to pay principal and interest on a timely basis or to make mandatory sinking-fund deposits, so long as such event of default does not allow the debtholders to accelerate the repayment of principal. (See SR-92-37.)

Debt issues, including mandatory convertible securities, that tie interest payments to the financial condition of the borrower generally should not be included in capital. Such payments may be linked to the financial condition of an institution through various ways, such as (1) an auction-rate mechanism, which is a preset schedule-mandating interest-rate increase either over the passage of time or as the credit rating of the bank holding company declines,[61] or (2) a term that raises the interest rate if payment is not made in a timely fashion. As the financial condition of a bank holding company declines, it is faced with higher and higher payments on its credit-sensitive subordinated debt at a time when it most needs to conserve its resources. Thus, credit-sensitive debt does not provide the support expected of a capital instrument to an institution whose financial condition is deteriorating; rather, the credit-sensitive feature can accelerate depletion of the organization's resources and increase the likelihood of default on the debt. While such terms may be acceptable in perpetual preferred stock qualifying for tier 2 capi-

60. A provision in bank holding company subordinated debt that permits acceleration in the event a major bank subsidiary enters into receivership would not jeopardize the issue's tier 2 capital status. A provision permitting acceleration in the event that any other type of affiliate of the issuer entered into bankruptcy or receivership would not be acceptable in a subordinated debt issue included in capital.

61. Although payment on debt whose interest rate increases over time may not on the surface appear to be directly linked to the financial condition of the issuing banking organization, such debt (sometimes referred to as expanding- or exploding-rate debt) has a strong potential to be credit sensitive in substance. Banking organizations whose financial condition has strengthened are more likely to be able to refinance the debt at a lower rate than that mandated by the preset increase, whereas those banking organizations whose condition has deteriorated are less likely to be able to do so. Moreover, just when these latter institutions would be in the most need of conserving capital, they would be under strong pressure to redeem the debt as an alternative to paying higher rates and therefore would accelerate depletion of their resources.

tal, they are not acceptable in a capital debt issue because a banking organization in a deteriorating financial condition may not have the option available in equity issues of eliminating the higher payments without going into default. If a bank holding company has included in its capital subordinated debt issued by an operating or nonoperating subsidiary, it is possible that the debt is in effect secured and, thus, not includable in capital.

4060.3.5.4.3 Ineligible Collateral and Guarantees

The risk-based capital guidelines recognize collateral and guarantees in only a limited number of cases. Other types of collateral and guarantees support the asset mix of banking organizations, particularly within their loan portfolios. Such collateral or guarantees may serve to substantially improve the overall quality of loan portfolios and other credit exposures, and should be considered by examiners when they are arriving at their overall assessment of capital adequacy.

4060.3.5.4.4 Overall Asset Quality

The conclusions drawn by banking organizations from calculating their risk-based capital ratios may be significantly different from conclusions drawn by examiners. The main reason for these differences is the assessment of asset quality. Examiners must assess the capital adequacy of banking organizations, taking into account examination or inspection findings, particularly those findings regarding the severity of problem and classified assets and investment or loan-portfolio concentrations, as well as the adequacy of the banking organization's allowance for loan and lease losses.

4060.3.5.4.5 Interest-Only Strips and Principal-Only Strips

Interest-only strips (IOs) and principal-only strips (POs) have highly volatile price characteristics as interest rates change, and they are generally not considered appropriate investments for most banking organizations. However, some sophisticated banking organizations may use IOs and POs as hedging vehicles. The Board does not want to discourage the legitimate use of IOs and POs as hedging vehicles. Examiners' assessments of capital adequacy should reflect banking organizations' appropriate use of hedging instruments, including IOs and POs. Banking organizations that have appropriately hedged their interest-rate exposure may be permitted to operate with lower levels of capital than those banking organizations that are vulnerable to interest-rate changes.

4060.3.5.4.6 Interest-Rate Risk

Examiners are to continue to scrutinize banking organizations' interest-rate risk exposure carefully and to require that organizations with undue levels of interest-rate risk strengthen their capital positions even though they may meet the minimum risk-based capital standards.

4060.3.5.4.7 Claims on, and Claims Guaranteed by, OECD Central Governments

The risk-based capital guidelines assign a zero percent risk weight to all direct claims (including securities, loans, and leases) on the central governments of the OECD-based group of countries and U.S. government agencies. Generally, the only direct claims banking organizations have on the U.S. government and its agencies are in the form of Treasury securities. Zero-coupon, that is, single-payment, Treasury securities trading under the U.S. Treasury's Separately Traded Registered Interest and Principal (STRIP) Program are assigned to the zero percent risk category. A security that has been stripped by a private-sector entity, such as a brokerage firm, is considered an obligation of that entity and, accordingly, is assigned to the 100 percent risk category.

Claims that are directly and unconditionally guaranteed by an OECD-based central government or a U.S. government agency are also assigned to the zero percent risk category. Such claims that are not unconditionally guaranteed are assigned to the 20 percent risk category. A claim is not considered to be unconditionally guaranteed by a central government if the validity of the guarantee depends on some affirmative action by the holder or a third party. Generally, securities guaranteed by the U.S. government or its agencies that are actively traded in financial markets are considered to be unconditionally guaranteed. These include Government National Mortgage Association (GNMA) and

Small Business Administration (SBA) securities.

As of December 30, 1992, banking organizations are permitted to assign to the zero percent risk category claims collateralized by cash on deposit in the banking organization or by OECD central governments or U.S. government agency securities for which a positive collateral margin is maintained on a daily basis, fully taking into account any change in the banking organization's exposure to the obligor or counterparty under a claim in relation to the market value of the collateral held in support of that claim. The Board is not requiring that a specific minimum margin of collateral be maintained on collateralized transactions assigned to the zero percent risk category. The Board expects that banking organizations will establish, as a part of prudent operating procedures, a minimum level of margin for these transactions based on such factors as the volatility of the securities involved, so as to avoid unduly frequent margin calls.

A limited number of U.S. government agency–guaranteed loans are deemed to be unconditionally guaranteed and, hence, can be assigned to the zero percent risk category. These include most loans guaranteed by the Export-Import Bank (Exim Bank),[62] loans guaranteed by the U.S. Agency for International Development (AID) under its Housing Guaranty Loan Program, SBA loans subject to a secondary participation guaranty (in accordance with SBA Form 1086), and Farmers Home Administration (FmHA) loans subject to an assignment guaranty agreement in accordance with FmHA Form 449–36.

Apart from the exceptions noted in the preceding paragraph, loans guaranteed by the U.S. government or its agencies are considered conditionally guaranteed. The guaranteed portion of the loans is assigned to the 20 percent category. These loans include, but are not limited to, loans guaranteed by the Commodity Credit Corporation (CCC), the Federal Housing Administration (FHA), the Foreign Credit Insurance Association (FCIA), the Overseas Private Investment Corporation (OPIC), and the Veterans Administration (VA), and, except as indicated above, portions of loans guaranteed by the FmHA and the SBA. Loan guarantees offered by FCIA and OPIC often guarantee against political risk. However, only that portion of a loan guaranteed by FCIA or OPIC against commercial or credit risk may receive a preferential 20 percent risk weight. The portion of government trust certificates issued to provide funds for the refinancing of foreign military sales loans made by the Federal Financing Bank or the Defense Security Assistance Agency that are indirectly guaranteed by the U.S. government also qualify for the 20 percent risk weight.

62. Loans guaranteed under Exim Bank's Working Capital Guarantee Program, however, receive a 20 percent risk weight.

4060.3.6 DIFFERENCE IN APPLICATION OF THE RISK-BASED CAPITAL GUIDELINES TO BANKING ORGANIZATIONS

The capital guidelines are generally the same for state member banks and bank holding companies. Since year-end 1992, however, there has been one significant difference: the manner in which capital is defined for use in computing the risk-based capital ratio. Specifically, perpetual preferred stock is handled differently for state member banks than it is for bank holding companies.

4060.3.6.1 Difference in Treatment of Perpetual Preferred Stock

Bank holding companies may include unlimited amounts of *noncumulative* perpetual preferred stock in tier 1 capital and limited amounts of cumulative perpetual preferred stock. The aggregate amount of *cumulative* stock that may be included in a bank holding company's tier 1 capital is limited to one-third of the sum of core capital elements, excluding cumulative perpetual preferred stock. Any amount of *cumulative* perpetual preferred stock in excess of this limit may be included as tier 2 capital. In contrast, state member banks may include only noncumulative perpetual preferred stock in tier 1 capital.

4060.3.6.2 Perpetual Preferred Stock (Terms Relating to Tier 1 Treatment)

Given the importance of core capital, the Federal Reserve's guidelines exclude from tier 1 capital preferred stock (including auction-rate preferred) in which the dividend rate is reset periodically, based in whole or in part upon the banking organization's financial condition or credit standing. Under such instruments, the obligation to pay out higher dividends in response to a deterioration in an organization's financial condition is inconsistent with the essential precept that capital should provide both strength and loss-absorption capacity to an organization during periods of adversity. Rather than paying out higher dividends, banking organizations are expected to conserve capital during such periods.

Ordinarily, fixed-rate preferred stock and traditional floating- or adjustable-rate preferred stock—where the dividend rate is based on an independent market index that is in no way tied to the issuer's financial condition—do not raise significant supervisory concerns, especially if the adjustable-rate instrument is accompanied by reasonable spreads and cap rates. However, certain other features that have been incorporated in, or mentioned for possible inclusion in, some preferred stock issues do raise serious questions about whether these issues will truly serve as a permanent, or even long-term, source of capital. Such features include exploding-rate or similar mechanisms, whereby, after a specified period, the dividend rate automatically increases to a level that appears unreasonable or that could create substantial incentives for the issuer to redeem the instrument. Perpetual preferred stock with this type of feature could cause the banking organization to be faced with higher dividend requirements at a future date when it is experiencing financial difficulties. Such preferred stock is not generally includable in tier 1 capital.

4060.3.7 CASH REDEMPTION OF PERPETUAL PREFERRED STOCK

Under the Federal Reserve's risk-based capital guidelines, two essential characteristics of core (tier 1) capital—which comprises common stock and perpetual preferred stock—are loss-absorption capacity and stability. In addition to existing laws and regulations that pertain to the redemption or repurchase of capital securities, the Federal Reserve's risk-based capital guidelines generally provide that any bank holding company contemplating the redemption of material amounts of permanent equity instruments, including perpetual preferred stock, should receive Federal Reserve approval before taking such action.[63] Any perpetual preferred stock with a feature permitting redemption at the option of the issuer may qualify as capital *only* *if* the redemption is subject to prior approval of the Federal Reserve.

The guidelines indicate that consultation with the Federal Reserve could be unnecessary if the instrument is redeemed with the proceeds of another acceptable tier 1 instrument and the organization's capital is considered fully adequate. However, because of the need to make supervisory judgments on these conditions, as well as the objective of fostering sound capital positions, banking organizations contemplating material redemptions of core capital are generally expected to discuss these plans with their appropriate supervisory authorities, regardless of the circumstances. This has long been the expectation and practice of the Federal Reserve. Prior consultation puts the supervisory authority in a position to take appropriate action if any planned capital redemption could have an adverse impact on an organization's financial condition.

The Federal Reserve's interest in the level and composition of capital derives both from the System's general supervisory responsibilities to monitor and address any actions that could erode an organization's capital base and from the need to implement the letter and spirit of supervisory guidelines on capital adequacy. Under the Federal Reserve's guidelines, to qualify as capital an instrument may not contain or be covered by covenants, terms, or restrictions that are inconsistent with safe and sound banking practice. Moreover, perpetual preferred stock cannot contain provisions that would require future redemption of the issue, and the issuer must have the ability and legal right to defer or eliminate preferred dividends.

4060.3.7.1 Federal Reserve's Supervisory Position on Cash Redemption of Tier 1 Preferred Stock

To qualify for tier 1 treatment, redemption for cash, regardless of source, is permissible only at the issuer's option. Moreover, in view of the importance of ensuring the stability of tier 1 capital, tier 1 preferred stock instruments should also provide that cash redemption would be permitted only with the prior consent of the Federal Reserve. The Federal Reserve expects that it would usually grant such approval, when consistent with the organization's overall financial condition, if the preferred shares are redeemed with the proceeds of an acceptable

63. This general principle also applies to the redemption of limited-life capital instruments before their stated maturities.

tier 1 capital instrument that would maintain or strengthen the issuer's capital base. Approval could also be granted if the Federal Reserve determines that the issuer's capital position after the redemption would clearly be adequate and that the issuer's condition and circumstances warrant the reduction of a source of permanent capital.

4060.3.8 COMMON STOCK REPURCHASES AND DIVIDEND INCREASES ON COMMON STOCK

The Federal Reserve has long emphasized the importance of prudent levels of capital to the overall safety and soundness of banking organizations. In pursuit of its supervisory objective to achieve an adequate level of capitalization in banking organizations, the Federal Reserve has over time promulgated various rules, guidelines, and standards concerning capital levels and the acceptable characteristics of various capital instruments and transactions. With respect to cash redemptions of common stock, section 225.4(b)(1) of Regulation Y requires bank holding companies to give the Federal Reserve prior notice of any repurchase of common stock that would reduce total equity capital by 10 percent or more aggregated over any 12-month period. The risk-based capital guidelines further request that bank holding companies consult with the Federal Reserve before any material redemption of permanent equity instruments.

Because of the need for banking organizations to strengthen their capital positions generally, the Board strongly recommends that bank holding companies deemed to be experiencing financial weaknesses (or those at significant risk of developing financial weaknesses) consult with the appropriate Federal Reserve Bank before any cash redemption of common stock. Similarly, any bank holding company considering expansion, either through acquisitions or through new activities, is also requested to consult with the appropriate Federal Reserve Bank before any cash redemption of common stock. Although there may be legitimate uses of repurchased shares (for example, in ESOP transactions), this request is intended to prevent an imprudent or untimely repurchase that would have an immediate or potentially adverse impact on the financial condition of the banking organization. In general, Reserve Banks should discourage bank holding companies from repurchasing their shares if there would be an adverse effect on the capital of the organization. A similar procedure was adopted for redemptions of perpetual preferred stock. (See section 4060.3.7 or SR-89-20.)

Further, because the banking organizations' ability to gain access to capital markets can be further diminished by rating-agency downgrades, the Federal Reserve considers internal capital generation an important element in a banking organization's capital planning. Therefore, bank holding companies in general, but particularly those experiencing any degree of financial weakness, are requested to consult with the appropriate Federal Reserve Bank before increasing the rate of cash dividends paid on common stock, an action that reduces capital-generation rates for companies experiencing financial weakness. It is the intention of the Federal Reserve to ensure that the financial condition, future earnings prospects, and capital level of the banking organization are consistent with any proposed increase in dividends. (See Regulation Y, section 225.4(b)(1) and appendix A, section II.)

4060.3.9 MANDATORY CONVERTIBLE DEBT SECURITIES AND PERPETUAL DEBT

Mandatory convertible debt securities are essentially subordinated debt instruments that may be converted into common or perpetual preferred stock within a specified period of time, not to exceed 12 years. To be counted as tier 2 capital, mandatory convertible securities must meet the criteria set forth below. These criteria cover the two basic types of mandatory convertible securities: equity contract notes (securities that obligate the holder to take common or perpetual preferred stock of the issuer in lieu of cash for repayment of principal) and equity commitment notes (securities that are redeemable only with the proceeds from the sale of common or perpetual preferred stock). Bank holding companies may include mandatory convertible debt securities (net of the stock dedicated to retire the issue(s)), in the form of equity contract notes or equity commitment notes as unlimited elements of tier 2 capital, provided that the applicable criteria set forth below are met. (See also Regulation Y, appendix B.) They are also permitted to include perpetual debt as an element of tier 2 capital. To be included as unlimited elements of tier 2 capital for bank holding companies, these instruments must meet the respective criteria set forth below (also found in Regulation Y, appendix B). The amount of mandatory convertible securities that have the proceeds of the issuance of common stock dedicated to redeem or retire them are treated as term subordinated debt subject to the specified limitation. A banking organization must receive Federal Reserve approval before redeeming (or repurchasing) mandatory convertible debt before maturity. The terms of the securities should note that such approval is required.

4060.3.9.1 Treatment of Debt with Dedicated Proceeds

If a bank holding company has issued common or perpetual preferred stock and dedicated the proceeds to the retirement or redemption of mandatory convertibles, the portion of mandatory convertibles covered by the dedication no longer carries a commitment to issue equity and, thus, has in effect been rendered into ordinary subordinated debt. Accordingly, the amount of the stock dedicated is netted from the amount of mandatory convertibles includable as unlimited tier 2 capital. The portion of such securities covered by dedications should be included in capital as subordinated debt, subject to amortization in the last five years of its life, and should be limited, together with other subordinated debt and intermediate-term preferred stock, to 50 percent of tier 1 capital. For example, a bank holding company has an outstanding equity contract note for $1 million and issues $300,000 of common stock, dedicating the proceeds to the retirement of the note. It would include the $300,000 of common stock in its tier 1 capital. The $700,000 of the equity contract note not covered by the dedication would be treated as an unlimited element of tier 2 capital. The $300,000 of the note covered by the dedication would be treated as subordinated debt.

4060.3.9.2 Treatment of Debt with Segregated Funds

In some cases, the indenture of a mandatory convertible debt issue may require the bank holding company to set up segregated trust funds to hold the proceeds from the sale of equity securities dedicated to pay off the principal of the mandatory convertibles at maturity. The portion of mandatory convertible securities covered by the amount of such segregated trust funds is considered secured and, thus, may not be included in capital. The maintenance of such a separate segregated fund for the redemption of mandatory convertibles exceeds the requirements of appendix B of Regulation Y. Accordingly, if a banking organization, with the agreement of the debtholders, wishes to eliminate the fund, regulatory approval normally should be given unless supervisory concerns warrant otherwise.

4060.3.9.3 Criteria Applicable to Both Types of Mandatory Convertible Securities

1. The securities must mature in 12 years or less.
2. The issuer may redeem securities before maturity only with the proceeds from the sale of common or perpetual preferred stock of the bank holding company. Any exception to this rule must be approved by the Federal Reserve. The securities may not be redeemed with the proceeds of another issue of mandatory convertible securities, nor may the issuer repurchase or acquire its own mandatory convertible securities for resale or reissuance.
3. Holders of the securities may not accelerate the payment of principal except in the event of bankruptcy, insolvency, or reorganization.
4. The securities must be subordinate in right of payment to all senior indebtedness of the issuer. If the proceeds of the securities are reloaned to an affiliate, the loan must be subordinated to the same degree as the original issue.
5. If an issuer intends to dedicate the proceeds of an issue of common or perpetual preferred stock to satisfy the funding requirements of an issue of mandatory convertible securities (that is, the requirement to retire or redeem the notes with the proceeds from the issuance of common or perpetual preferred stock), the issuer generally must make the dedication during the quarter in which the new common or preferred stock is issued.[64] As a general rule, if the dedication is not made within the

64. Common or perpetual preferred stock issued under dividend reinvestment plans or issued to finance acquisitions, including acquisitions of business entities, may be dedicated to the retirement or redemption of the mandatory convertible securities. Documentation certified by an authorized agent of the issuer showing the amount of common stock or perpetual preferred stock issued, the dates of issue, and amounts of such issues dedicated to the retirement or redemption of mandatory convertible securities will satisfy the dedication requirement.

prescribed period, then the securities issued may not at a later date be dedicated to the retirement or redemption of the mandatory convertible securities.[65]

4060.3.9.3.1 Additional Criteria Applicable to Equity Contract Notes

1. The note must contain a contractual provision (or be issued with a mandatory stock purchase contract) that requires the holder of the instrument to take the common or perpetual stock of the issuer in lieu of cash in satisfaction of the claim for principal repayment. The holder's obligation to take the common or perpetual preferred stock of the issuer may be waived if, and to the extent that, before the maturity date of the obligation, the issuer sells new common or perpetual preferred stock and dedicates the proceeds to the retirement or redemption of the notes. The dedication generally must be made during the quarter in which the new common or preferred stock is issued.
2. A stock purchase contract may be separated from a security only if (1) the holder of the contract provides sufficient collateral[66] to the issuer, or to an independent trustee for the benefit of the issuer, to ensure performance under the contract, and (2) the stock purchase contract requires the purchase of common or perpetual preferred stock.

65. For each dollar of common or perpetual preferred proceeds dedicated to the retirement or redemption of the notes, there is a corresponding reduction in the amount of outstanding mandatory securities that may qualify as tier 2 capital (the amount of proceeds dedicated would be included in tier 2 capital as subordinated debt subject, together with other subordinated debt, to a limit of 50 percent of tier 1 capital and to discounting of 20 percent per year during the last five years to maturity). De minimis amounts of common or perpetual stock issued under arrangements in which the amount of stock issued is not predictable, such as dividend reinvestment plans and employee stock option plans (but excluding public stock offerings and stock issued in connection with acquisitions), should be dedicated by no later than the company's fiscal year-end.

66. Collateral is defined as (1) cash or certificates of deposit; (2) U.S. government securities that will mature prior to or simultaneous with the maturity of the equity contract and that have a par or maturity value at least equal to the amount of the holder's obligation under the stock purchase contract; (3) standby letters of credit issued by an insured U.S. bank that is not an affiliate of the issuer; and (4) other collateral as may be designated from time to time by the Federal Reserve.

4060.3.9.3.2 Additional Criteria Applicable to Equity Commitment Notes

1. The indenture or note agreement must contain the following two provisions:
   a. The proceeds of the sale of common or perpetual preferred stock will be the sole source of repayment for the notes, and the issuer must dedicate the proceeds for the purpose of repaying the notes. (Documentation, certified by an authorized agent of the issuer, showing the amount of common or perpetual preferred stock issued, the dates of issue, and amounts of such issues dedicated to the retirement or redemption of mandatory convertible securities will satisfy the dedication requirement.)
   b. By the time that one-third of the life of the securities has run, the issuer must have raised and dedicated an amount equal to one-third of the original principal of the securities. By the time that two-thirds of the life of the securities has run, the issuer must have raised and dedicated an amount equal to two-thirds of the original principal of the securities. At least 60 days before the maturity of the securities, the issuer must have raised and dedicated an amount equal to the entire original principal of the securities. Proceeds dedicated to redemption or retirement of the notes must come only from the sale of common or perpetual preferred stock.[67]
2. If the issuer fails to meet any of these periodic funding requirements, the Federal Reserve will immediately cease to treat the unfunded securities as tier 2 capital and will take appropriate supervisory action. In addition, failure to meet the funding requirements will be viewed as a breach of a regulatory commitment, which the Board will take into consideration when it acts on statutory applications.
3. If a security is issued by a subsidiary of a bank or bank holding company, any guarantee of the principal by that subsidiary's parent bank or bank holding company must be subordinate to the same degree as the security issued by the subsidiary and limited to repayment of the principal amount of the security at its final maturity.

67. The funded portions of the securities will be deducted from the amount of mandatory convertible securities outstanding, but included in the amount of subordinated debt.

4060.3.9.4 Criteria for Determining the Tier 2 Capital Status of Perpetual Debt Instruments of Bank Holding Companies

1. The instrument must be unsecured.
2. The instrument may not give the noteholder the right to demand repayment of principal except in the event of bankruptcy, insolvency, or reorganization. The instrument must provide that nonpayment of interest shall not trigger repayment of the principal of the perpetual debt note or any other obligation of the issuer, nor shall it constitute prima facie evidence of insolvency or bankruptcy.
3. The issuer shall not voluntarily redeem the debt issue without prior Federal Reserve approval, except when the debt is converted to, exchanged for, or simultaneously replaced in like amount by an issue of common or perpetual preferred stock of the issuer or the issuer's parent company.
4. If issued by a bank holding company, a bank subsidiary, or a subsidiary with substantial operations, the instrument must contain a provision that allows the issuer to defer interest payments on the perpetual debt in the event of, and at the same time as, the elimination of dividends on all outstanding common or preferred stock of the issuer (or, in the case of a guarantee by a parent company, at the same time as the elimination of the dividends of the parent company's common and preferred stock). In the case of a nonoperating subsidiary (a funding subsidiary or one formed to issue securities), the deferral of interest payments must be triggered by elimination of dividends by the parent company.
5. If issued by a bank holding company or a subsidiary with substantial operations, the instrument must convert automatically to common or perpetual preferred stock of the issuer when the issuer's retained earnings and surplus accounts become negative. If an operating subsidiary's perpetual debt is guaranteed

by its parent, the debt may convert to the shares of the issuer or parent when the issuer's or parent's retained earnings and surplus accounts become negative. If issued by a nonoperating subsidiary of a bank holding company or bank, the instrument must convert automatically to common or preferred stock of the issuer's parent when the retained earnings and surplus accounts of the issuer's parent become negative.

4060.3.10 INSPECTION OBJECTIVES

1. To determine the adequacy of capital in relation to the risks inherent in the transactions and activities of the banking organization.
2. To determine compliance with the risk-based and tier 1 leverage measures of the capital adequacy guidelines as they apply to bank holding companies (see section 4060.4 of this manual).
3. To determine if the capital management and operating policies, practices, and procedures are adequate, and whether they reflect the requirements of the capital adequacy guidelines, if applicable.
4. To evaluate the performance of the bank holding company's officers and employees in administering and controlling the capital position of the organization, including its banking and nonbanking subsidiaries.
5. To evaluate the propriety and consistency of the banking organization's present and planned level of capitalization in light of the risk-based and leverage capital measures, as required, as well as existing conditions and future plans.
6. To initiate corrective action, in conjunction with the inspection process, when policies, procedures, or capital are deficient.

4060.3.11 INSPECTION PROCEDURES

Section 4060.3.5 lists items that examiners should consider during their analysis of capital adequacy with regard to the risk-based measure. The instructions in that section are to be followed in addition to the inspection procedures listed below.

Verification of the Risk-Based Capital Ratio

NOTE: Examiners should verify that the bank holding company has adequate systems in place to compute and document its risk-based capital ratios.

1. Determine if the bank holding company is correctly reporting risk-based capital information requested on the Federal Reserve's FR Y-9C Reports of Condition and Income and supplementary schedules.
   a. If the bank holding company has consolidated assets of less than $150 million, determine whether the bank holding company risk-based capital guidelines still apply because—
      (1) the bank holding company is engaged in nonbank activity involving significant leverage (includes off-balance-sheet activities) or
      (2) the parent company has a significant amount of outstanding debt that is held by the general public.

For the qualifying components of capital

2. Determine if management is adhering to the underlying terms of any currently outstanding stock issues.
3. Review common stock to ensure that the bank holding company is in compliance with the terms of any underlying agreement(s) and to determine if more than one class exists. If more than one class exists, review the terms for any preference or nonvoting features. If the terms include such features, determine whether the class of common stock qualifies for inclusion in tier 1 capital.
4. Review any perpetual and long-term preferred stock for the following:
   a. compliance with terms of the underlying agreement(s), carefully noting—
      (1) adherence to the cumulative or noncumulative nature of the stock and
      (2) adherence to any conversion rights
   b. proper categorization as tier 1 or tier 2 for capital adequacy purposes, noting the following requirements:
      (1) Tier 1 perpetual preferred stock must have the following characteristics:
         — no maturity date
         — not redeemable at the option of the holder
         — unsecured
         — ability to absorb losses

— ability and legal right for issuer to defer or eliminate dividends
— any issuer redemption feature subject to Federal Reserve prior approval
— fixed-rate or traditional floating- or adjustable-rate
— no features that would require or create an incentive for the issuer to redeem or repurchase the instrument, such as an ''exploding rate,'' an auction-rate pricing mechanism, or a feature that allows the stock to be converted into increasing numbers of common shares

(2) Perpetual preferred stock, includable within tier 2 capital without a sublimit, must have the characteristics listed within inspection procedure 4.b.(1) above for tier 1 perpetual preferred stock, but does not otherwise qualify for inclusion in tier 1 capital. For example, cumulative or auction-rate perpetual preferred stock, which does not qualify for tier 1 capital, may be includable in tier 2 capital.

5. Verify that minority interest in equity accounts of consolidated subsidiaries included in tier 1 capital consists of tier 1 capital elements. Determine whether any perpetual preferred stock of a subsidiary that is included in minority interest is secured by the subsidiary's assets; if so, that stock may not be included in capital.
6. Review the intermediate-term preferred stock and subordinated debt instruments included in capital for the following:
   a. compliance with terms of the underlying agreement(s), noting that subordinated debt containing one or both of the following terms may not be included in capital:
      (1) interest payments tied to the banking organization's financial condition
      (2) acceleration clauses or broad conditions of events of default that are inconsistent with safe and sound banking practices
   b. compliance with restrictions on the inclusion of such instruments in capital by verifying that the aggregate amount of both types of instruments does not exceed 50 percent of tier 1 capital (net of all goodwill) and that the portions includable in tier 2 capital possess the following characteristics:
      (1) unsecured
      (2) minimum five-year original weighted-average maturity
      (3) in the case of subordinated debt, contains terms stating that the debt (1) is not a deposit, (2) is not insured by a federal agency, (3) cannot be redeemed without prior approval from the Federal Reserve, and (4) is subordinated to depositors and general creditors
   c. appropriate amortization, if the instruments have a remaining maturity of less than five years
7. Determine, through review of minutes of the board of directors meetings, if a stock offering or subordinated debt issue is being considered. If so, determine that management is aware of the risk-based capital requirements for inclusion in capital.
8. Review any mandatory convertible debt securities for the following:
   a. compliance of the terms with the criteria set forth in Regulation Y (12 C.F.R. 225), appendix B
   b. notification in the terms of agreement that the redemption or repurchase of such securities prior to maturity is subject to prior approval from the Federal Reserve
   c. the treatment of the portions of such securities covered by the issuance of common or perpetual preferred stock dedicated to the repayment of the securities, bearing in mind the following:
      (1) The amount of the security covered by dedicated stock should be treated as subordinated debt and is subject, together with other subordinated debt and intermediate-term preferred stock, to a sublimit within tier 2 capital of 50 percent of tier 1 capital, as well as to amortization in the last five years of life.
      (2) The portion of a mandatory convertible security that is not covered by dedication qualifies for inclusion in tier 2 capital without any sublimit and without being subject to amortization in the last five years of life.
9. Verify that the transactions within the allowance for loan and lease losses have been properly accounted for during the inspection period and verify that the amount included in tier 2 capital has been limited to 1.25 percent of weighted-risk assets.

For the calculation of risk-weighted assets

10. Verify that each on- and off-balance-sheet item has been assigned to the appropriate risk category in accordance with the risk-based capital guidelines. Close attention should be paid to the underlying obligor, collateral, and guarantees, and to assignment to a risk category based upon the terms of a claim. The claim should be assigned to the risk category appropriate to the highest risk option available under the terms of the transaction. Verify that the bank holding company's documentation supports the assignment of preferential risk weights. If necessary, recalculate the value of risk-weighted assets.
11. Verify that all off-balance-sheet items have been converted properly to credit-equivalent amounts based on the risk-based capital guidelines. Close attention should be paid to the proper reporting of assets sold with recourse, financial and performance standby letters of credit, participations of off-balance-sheet transactions, and commitments.

Verification of the Tier 1 Leverage Ratio

1. Verify that the bank holding company has correctly calculated tier 1 capital in accordance with the definition of tier 1 capital for year-end 1992 as set forth in the risk-based capital guidelines.
2. Verify that the bank holding company has properly calculated average total consolidated assets.

Overall Assessment of Capital Adequacy

1. For bank holding companies that do not meet the minimum risk-based tier 1 leverage capital standard, as required, or that are otherwise considered to lack sufficient capital to support their activities, examine the capitalization plans for achieving adequate levels of capital and determine whether they are acceptable to the Federal Reserve District's management. Review and comment on these plans and any progress achieved in meeting the requirements.
2. The analysis of capital adequacy requires an evaluation of the propriety and consistency of the bank holding company's present and planned level of capitalization in light of existing conditions and future plans. In this regard, the examiner assigned to assessing capital adequacy should do the following:
   a. Using the latest Bank Holding Company Performance Report (BHCPR), analyze applicable ratios involving capital funds, comparing these ratios with those of its peer group and investigating trends or significant variations from peer-group averages.
   b. Determine that capital is sufficient to compensate for any instabilities or deficiencies in asset and liability mix and quality.
   c. Determine if the bank holding company's consolidated earnings performance enables it to fund its expansion adequately, to remain competitive in the market, and to replenish or increase its capital funds as needed.
   d. Analyze trends in the levels of debt versus equity funding, including double leverage, to determine the level of borrowing to fund equity, if any.
   e. If the reserve for loan losses is determined to be inadequate, analyze the impact of current and potential losses on the bank holding company's capital structure.
   f. Consider the impact of any management deficiencies on present and projected capital.
   g. Determine if there are any assets or contingent accounts whose quality represents an actual or potential serious weakening of capital.
   h. Consider the potential impact, should approval be given, of any proposed changes in controlling ownership on the projected capital position.
   i. Analyze assets that are considered undervalued on the balance sheet and carried at below-market values. The excess of market value over cost may represent an additional cushion to the bank holding company.
   j. Consider the cushion for absorbing losses that may be provided by any subordinated debt or intermediate-term preferred stock not included in tier 2 capital because of the 50 percent of tier 2 capital limitation or not included in capital for tier 1 leverage ratio purposes.
   k. Analyze any collateral and guarantees supporting assets that may not be taken into account for risk-based or tier 1 leverage capital purposes, and consider these in the

overall assessment of capital adequacy. This includes guarantees provided through credit-derivative transactions (see section 4060.3.5.3.9) in which the credit exposure is assigned to the risk category of the obligor of the reference asset or any collateral. For the latter, determine whether adequate capital and reserves are held against the exposures to reference assets.

l. Evaluate the consolidated asset quality of the bank holding company and determine whether it needs to strengthen its capital position based on the following:
   (1) the severity of problem and classified assets
   (2) investment or loan portfolio concentrations
   (3) the adequacy of loan-loss reserves

m. Analyze the bank holding company's management of interest-rate risk and use of hedging instruments. Determine if the bank holding company should strengthen its capital position based on undue levels of risk at any structural level within the organization. Review hedging instruments for any use of IOs and POs that may raise concerns, and management's expertise in using hedging instruments.

3. Review capital adjustments for goodwill, and other intangible assets (such as core deposit intangibles, favorable leasehold rights, organization costs, purchased trust-servicing rights, purchased investment-management relationships, purchased home-equity rights, merchant-servicing rights), that are required to be deducted from capital. An analysis of intangible assets that may be included in capital also must be performed. The analysis of these intangible assets should be performed using the following procedures:
   a. Verify the existence, the evidence of title to, and the accounting for intangible assets. Review and assess both the book values and the fair market values assigned to intangible assets, as well as the adequacy of the documentation evidencing the values, the amortization methods, and assigned amortization periods. When assessing the quality of a banking organization's intangible assets for purposes of evaluating its overall capital position, consider—
      (1) the reliability and predictability of any cash flows associated with the assets and the degree of certainty that can be achieved in periodically determining the asset's useful life and value,
      (2) the existence of an active and liquid market for the assets, and
      (3) the feasibility of selling the asset apart from the banking organization or from the bulk of its assets.
   b. Verify that intangibles are being reduced in accordance with the amortization method and that, if the carrying amount exceeds its value, the carrying value of the intangible asset is reduced accordingly, or is written off.
   c. Determine if a quarterly review of the level and quality of all intangibles is performed.
   d. Verify that goodwill and nonqualifying identifiable intangibles are deducted from tier 1 capital.
   e. Determine if the amount of mortgage-servicing rights or purchased credit-card relationships was within the established limitations on the amount that may be included in tier 1 capital.
   f. Ascertain whether the asset values of the intangible assets were reassessed during the annual audit.
4. In light of the overall capital adequacy analysis, and in accordance with the Federal Reserve's capital adequacy guidelines, determine if any appropriate supervisory action is warranted because of deficient levels of capital in relation to inherent risks of the bank holding company organization.
5. Review the following in preparation for discussion with appropriate management:
   a. all noted deficiencies regarding the capital accounts and
   b. the adequacy of present and projected capital
6. Ascertain through minutes, reports, etc., or through discussions with management how the bank holding company's future business and operational plans will affect its asset quality, capital position, and other areas of its balance sheet.
7. Prepare comments for the inspection report based on the bank holding company's capital position, including any comments on deficiencies that were observed.
8. Update the appropriate workpapers with any information that will facilitate future inspections.

2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

On August 2, 1990, the Board issued capital leverage guidelines, effective September 10, 1990. The Board established the capital leverage ratio to be applied in conjunction with the risk-based capital guidelines. The leverage ratio is designed to complement the risk-based capital ratios when the overall capital adequacy of banking organizations is being determined. This section includes the subsequent revisions to the capital leverage guidelines.

4060.4.1 CAPITAL ADEQUACY GUIDELINES FOR BANK HOLDING COMPANIES: TIER 1 LEVERAGE MEASURE

The tier 1 leverage measure is found in appendix D of Regulation Y (12 C.F.R. 225).

4060.4.1.1 Overview of the Tier 1 Leverage Measure for Bank Holding Companies

The Board of Governors of the Federal Reserve System has adopted a minimum ratio of tier 1 capital to total assets to assist in the assessment of the capital adequacy of bank holding companies (banking organizations).[1] The principal objective of this measure is to place a constraint on the maximum degree to which a banking organization can leverage its equity capital base. It is intended to be used as a supplement to the risk-based capital measure.

The guidelines apply on a consolidated basis to bank holding companies with consolidated assets of $150 million or more. For bank holding companies with less than $150 million in consolidated assets, the guidelines will be applied on a bank-only basis unless (1) the parent bank holding company is engaged in a nonbank activity involving significant leverage[2] or (2) the parent company has a significant amount of outstanding debt that is held by the general public.

The tier 1 leverage guidelines are to be used in the inspection and supervisory process as well as in the analysis of applications acted upon by the Federal Reserve. The Board will review the guidelines from time to time and will consider the need for possible adjustments in light of any significant changes in the economy, financial markets, and banking practices.

4060.4.1.2 Tier 1 Leverage Ratio for Bank Holding Companies

The Board has established a minimum level of tier 1 capital to total assets of 4.0 percent for bank holding companies. For strong bank holding companies (rated composite 1 under the BOPEC rating system of bank holding companies) and for bank holding companies that have implemented the Board's risk-based capital measure for market risk as set forth in appendixes A and E of part 225 of Regulation Y, however, the minimum ratio of tier 1 capital to total assets is 3.0 percent. Banking organizations with supervisory, financial, operational, or managerial weaknesses, as well as organizations that are anticipating or experiencing significant growth, are expected to maintain capital ratios well above the minimum levels. Moreover, higher capital ratios may be required for any bank holding company if warranted by its particular circumstances or risk profile. In all cases, bank holding companies should hold capital commensurate with the level and nature of the risks, including the volume and severity of problem loans, to which they are exposed.

A banking organization's tier 1 leverage ratio is calculated by dividing its tier 1 capital (the numerator of the ratio) by its average total consolidated assets (the denominator of the ratio). The ratio will also be calculated on the basis of period-end assets, whenever necessary, on a case-by-case basis. For the purpose of this leverage ratio, the definition of tier 1 capital, as set forth in the risk-based capital guidelines in appendix A of Regulation Y, will be used.[3] As a

1. Supervisory ratios that related capital to total assets for state member banks are outlined in appendix B of Regulation Y.

2. A parent company that is engaged in significant off-balance-sheet activities would generally be deemed to be engaged in activities that involve significant leverage.

3. Tier 1 capital for bank holding companies includes common equity, minority interest in the equity accounts of consolidated subsidiaries, qualifying noncumulative perpetual preferred stock, and qualifying cumulative perpetual preferred stock. (Cumulative perpetual preferred stock is limited to 25 percent of tier 1 capital.) In addition, as a general matter, tier 1 capital excludes goodwill; amounts of mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships that, in the aggregate, exceed 100 percent of tier 1 capital; amounts of nonmortgage-servicing assets and purchased credit-card relationships that, in the aggregate, exceed 25 percent of tier 1 capital; amounts

general matter, average total consolidated assets are defined as the quarterly average total assets (defined net of the allowance for loan and lease losses) reported on the banking organization's Consolidated Financial Statements (FR Y-9C Report), less goodwill; amounts of mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships that, in the aggregate, are in excess of 100 percent of tier 1 capital; amounts of nonmortgage-servicing assets and purchased credit-card relationships that, in the aggregate, are in excess of 25 percent of tier 1 capital; amounts of credit-enhancing interest-only strips that are in excess of 25 percent of tier 1 capital; all other identifiable intangible assets; any investments in subsidiaries or associated companies that the Federal Reserve determines should be deducted from tier 1 capital; deferred tax assets that are dependent upon future taxable income, net of their valuation allowance, in excess of the limitation set forth in section II.B.4 of appendix A of Regulation Y;[4] and the amount of the total adjusted carrying value of nonfinancial equity investments that is subject to a deduction from tier 1 capital.

of credit-enhancing interest-only strips that are in excess of 25 percent of tier 1 capital; all other identifiable intangible assets; deferred tax assets that are dependent upon future taxable income, net of their valuation allowance, in excess of certain limitations; and a percentage of the organization's nonfinancial equity investments. The Federal Reserve may exclude certain investments in subsidiaries and associated companies as appropriate.

Whenever appropriate, including when an organization is undertaking expansion, seeking to engage in new activities, or otherwise facing unusual or abnormal risks, the Board will continue to consider the level of an individual organization's tangible tier 1 leverage ratio (after deducting all intangibles) in making an overall assessment of capital adequacy. This is consistent with the Federal Reserve's risk-based capital guidelines and long-standing Board policy and practice with regard to leverage guidelines. Organizations experiencing growth, whether internally or by acquisition, are expected to maintain strong capital positions substantially above minimum supervisory levels, without significant reliance on intangible assets.

4. Deductions from tier 1 capital and other adjustments are discussed more fully in section II.B. of appendix A of Regulation Y.

Banking organizations and supervisors[1] must consider a broader range of exposures and deal with an increasingly complex array of financial instruments and activities that reflect important, but often subtle, differences in the levels of risk. Many banking organizations, especially large banking organizations and others with complex risk profiles, or those that are engaged in complex transfers of risk,[2] require formal analytical processes to identify and measure their risks and to maintain an adequate overall level of capital that is appropriate to those risks.

4060.7.1 FACTORS USED IN EVALUATING OVERALL CAPITAL ADEQUACY

Most banking organizations are currently considering several factors in evaluating their overall capital adequacy:

1. a comparison of their own capital ratios with regulatory standards and with those of industry peers
2. consideration of their—
   a. identified risk concentrations in credit and other activities;
   b. current and desired credit-agency ratings, if applicable; and
   c. the organization's historical experiences, including severe adverse events in its past.

4060.7.2 SOPHISTICATED TECHNIQUES USED IN ASSESSING CAPITAL ADEQUACY

Some more sophisticated banking organizations use risk-modeling techniques and scenario analyses to evaluate risk, but they generally have not formally incorporated these analyses into their overall assessment of capital adequacy. Those banking organizations that are using risk modeling and scenario analysis as tools to illuminate potential economic losses arising from certain types of risk are working to integrate these tools, as they apply to different risk types, into their capital adequacy assessments. The approaches and methods used vary among banking organizations, as does the degree of precision and integration. Sound practices are clearly moving toward a more quantitative, systematic, and comprehensive process for risk evaluation. Sophisticated banking organizations are also increasingly using analytical techniques developed either for pricing and performance measurement across business and product lines or for making portfolio risk-management decisions. Such techniques incorporate one or more volatility-based measures that allow for analysis of unexpected losses as well as more subjective considerations.

Regardless of the techniques used, nearly all U.S. banking organizations have found it advantageous to operate with capital levels above regulatory minimums—and above levels defined as ''well capitalized'' by regulation. High capital ratios are often not indicative of overall capital adequacy, especially for securitizations of high-quality assets and other capital arbitrage techniques. Supervisors often cannot rely solely on risk-based capital ratios as indicators of capital strength at banking organizations engaging in these types of activities.

4060.7.3 STRENGTHENING CAPITAL ADEQUACY

Banking organizations and their supervisors are increasingly emphasizing internal processes for assessing risks and for ensuring that capital, liquidity, and other financial resources are adequate in relation to an organization's overall risk profile. This increased emphasis stems from the greater scope and complexity of the banking business, particularly those activities related to ongoing financial innovation. Banking organizations therefore need to ensure that their capital is not only adequate to meet formal regulatory standards, but is also fully sufficient to support their underlying risk positions. Internal capital-management processes at large, complex banking organizations need to be significantly improved for better integration with internal risk measurement and analysis. See SR-99-18.

1. The term ''supervisors'' refers to, as an example, federal banking organization supervisors.

2. Such complex transfers of risk would include collateralized loan obligations (CLOs), credit derivatives, and credit-linked notes. For information on CLOs, see section 4353.1 in the *Trading and Capital-Markets Activities Manual*. For information on credit derivatives, see SR-96-17 or section 2129.0, and for secondary-market credit activities, SR-97-21 or section 2129.05.

4060.7.4 SUPERVISORY APPROACH TO EVALUATING CAPITAL ADEQUACY MANAGEMENT

Supervisors and examiners need to determine whether internal capital-management processes meaningfully tie the identification, monitoring, and evaluation of the risks that arise from the banking organization's business activities to the determination of its capital needs. The larger and more complex banking organizations are working to broaden their consideration of risks in assessing capital adequacy, and examiners should not immediately expect these organizations to have in place a comprehensive internal process for assessing capital adequacy. Examiners should expect, however, that such banking organizations will initiate improved capital-management efforts to do so promptly, and thereafter will make steady and meaningful progress toward that end. As these processes develop and become fully implemented, supervisors and examiners should also place increasing reliance on internal assessments of capital adequacy as an integral part of a banking organization's *capital adequacy* rating. Examiners should evaluate an organization's progress in developing these internal processes for capital adequacy assessment since the previous inspection, considering the organization's former practices and current status relative to its peers. The results of the examiner's evaluation should be recorded in the inspection report.

4060.7.5 FUNDAMENTAL ELEMENTS OF AN INTERNAL ANALYSIS OF CAPITAL ADEQUACY

A sound and effective internal analysis of capital adequacy should include the following elements:

1. *Identifying and measuring all material risks.* A disciplined risk-measurement program promotes consistency and thoroughness in assessing current and prospective risk profiles, recognizing that risks often cannot be precisely measured. The detail and sophistication of risk measurement should be appropriate for the nature of the risks posed by each of the banking organization's activities and its asset size. At a minimum, risk-measurement systems should be sufficiently comprehensive and rigorous to capture the nature and magnitude of the risks faced by the organization, while differentiating risk exposures consistently among risk categories and levels of riskiness. Controls should be in place to ensure objectivity and consistency and that all material risks—both on- and off-balance-sheet—are adequately addressed.

   Banking organizations should conduct detailed analyses to support the accuracy or appropriateness of the risk-measurement techniques used. Similarly, inputs used in risk measurement should be of good quality. Those risks not easily quantified should be evaluated through more subjective, qualitative techniques or through stress testing. Risk-profile changes should be promptly incorporated into risk measures, whether the changes are due to new products, increased volumes or changes in concentrations, the quality of the portfolio, or the overall economic environment. Such measurement *should not* be oriented to the current treatment of these transactions under risk-based capital regulations.

   When measuring such risks, banking organizations should perform comprehensive and rigorous stress tests to identify possible events or changes in markets that could have serious adverse effects in the future. Adequate consideration should be given to contingent exposures arising from loan commitments, securitization programs, and other transactions or activities that may create such exposure.
2. *Relating capital to the level of risk.* The amount of capital held should reflect not only the measured amount of risk but also an additional amount to account for potential uncertainties in risk measurement. A banking organization's capital should reflect the perceived level of precision in the risk measures used, the potential volatility of exposures, and the relative importance of the activities producing the risk. Capital levels should also reflect the fact that historical correlation among exposures can change rapidly.

   Banking organizations should be able to demonstrate that their approach to relating capital to risk is conceptually sound and that outputs and results are reasonable.[3] Sensi-

3. One credible method for assessing capital adequacy would be for a banking organization to consider itself adequately capitalized if it meets a reasonable and objectively determined standard of financial health, tempered by sound judgment—such as a target public-agency debt rating or even a statistically measured maximum probability of becoming insolvent over a given time horizon. In effect, this latter method is the foundation of the Basle Accord's treatment of capital requirements for market and foreign-exchange risk.

tivity analysis of key inputs and peer analysis can be used in assessing an organization's approach to relating its capital to risk.

3. *Stating explicit capital adequacy goals with respect to risk.* Explicit goals need to be established for capitalization as a standard for evaluating the banking organization's capital adequacy with respect to risk. Its target capital levels might reflect the desired level of risk coverage or, alternatively, a desired credit rating that reflects a desired degree of creditworthiness and thus access to funding sources. These goals should be reviewed and approved by the board of directors. Because risk profiles and goals may differ across banking organizations, the chosen target levels of capital may differ significantly from one organization to another. Moreover, banking organizations should evaluate whether long-run capital targets might differ from short-run goals, based on current and planned changes in risk profiles and the recognition that accommodating new capital needs can require significant lead time.

   In addition, capital goals and the monitoring of performance against those goals should be integrated with the methodology used to identify the adequacy of the allowance for credit losses (the allowance). Both the allowance and capital represent the ability to absorb losses; however, an insufficiently clear distinction between their respective roles can distort the analysis of their adequacy. For example, a banking organization's internal standard of *capital* adequacy for credit risk could reflect the desire that capital absorb ''unexpected losses''—that is, some level of potential losses above that level already estimated as being inherent in the current portfolio and reflected in the allowance.[4] If the allowance is not maintained at the high end of the range of estimated credit losses, the banking organization would require more capital than would otherwise be necessary to maintain its overall desired capacity to absorb potential losses. Failure to recognize this relationship could lead to overestimating the strength of its capital position.

4. *Assessing conformity to the banking organization's stated objectives.* A banking organization's target level and composition of capital, along with the process for setting and monitoring such targets, should be periodically reviewed and approved by its board of directors.

4. In March 1999, the banking agencies and the Securities and Exchange Commission issued a joint interagency letter to financial institutions stressing that depository institutions should have prudent and conservative allowances that fall within an acceptable range of estimated losses. The Federal Reserve has issued additional guidance on credit-loss allowances to supervisors and bankers. See SR-99-13 and SR-99-22.

4060.7.6 RISKS ADDRESSED IN A SOUND INTERNAL ANALYSIS OF CAPITAL ADEQUACY

Sound internal risk-measurement and capital-assessment processes should address the full range of risks faced by the banking organization. The capital regulations of the Federal Reserve (and the other U.S. banking agencies) refer to many specific factors and other risks that banking organizations should consider in assessing capital adequacy.[5]

Credit risk. Internal credit-risk-rating systems are vital to measuring and managing credit risk at large banking organizations. A large banking organization's internal ratings system should be adequate to support the identification and measurement of risk for its lending activities and be adequately integrated into its overall analysis of capital adequacy (see SR-98-25). Well-structured credit-risk-rating systems should reflect implicit, if not explicit, judgments of loss probabilities or expected loss, and should be supported where possible by quantitative analysis. Definitions of risk ratings should be sufficiently detailed and descriptive, consistently applied, and reviewed throughout the organization.[6]

Banking organizations should also take full account of credit risk arising from securitization and other secondary-market credit activities, including credit derivatives (see SR-97-21).[7] Maintaining detailed and comprehensive credit-risk measures is most necessary at banking orga-

5. See 12 CFR 208, appendix A (overview), for state member institutions and 12 CFR 225, appendix A (overview), for bank holding companies.

6. SR-98-25 and section 2122.0 discuss the need for banking organizations to have sufficiently detailed, consistent, and accurate risk ratings for all loans, not only for criticized or problem credits. This guidance also describes an emerging sound practice of incorporating such ratings information into internal capital- allocation frameworks, recognizing that riskier assets require higher capital levels.

7. Secondary-market credit activities generally include loan syndications, loan sales and participations, credit derivatives, and asset securitizations, as well as the provision of credit enhancements and liquidity facilities to support such transactions. See SR-97-21 and section 2129.05.

nizations that conduct asset securitization programs, as these activities have the potential to greatly change—and reduce the transparency of—the risk profile of credit portfolios.[8] Because the current capital standard treats most loans alike, banking organizations have incentives to reduce their regulatory capital requirements by securitizing or otherwise selling lower-risk assets, while increasing the average level of remaining credit risk through devices like first-loss positions and contingent exposure. Thus, it is important that banking organizations are able to assess their remaining risks and hold appropriate levels of capital and allowances. Banking organizations are at the frontier of financial innovation, and they should also be at the frontier of risk measurement and internal capital allocation.

Market risk. The regulatory capital standard for market risk is based largely on a banking organization's own measure of value-at-risk (VaR). The market-risk standard emphasizes the importance of stress testing as a critical complement to a VaR-based calculation in evaluating the adequacy of capital to support the trading function.

Interest-rate risk. The interest-rate risk inherent in a banking organization's activities should also be closely monitored. The banking agencies have emphasized that banking organizations should carefully assess the risk to the economic value of their capital from adverse changes in interest rates. The Joint Agency Policy Statement on Interest-Rate Risk (see SR-96-13) stresses the importance of (1) assessing interest-rate risk in relation to the economic value of a banking organization's capital and (2) sound practices in selecting appropriate interest-rate scenarios to be applied for capital adequacy purposes.

Operational and other risks. Many banking organizations view operational risk—often viewed as any risk not categorized as credit or market risk—as being second in significance only to credit risk. Although operational risk does not easily lend itself to quantitative measurement, it can result in substantial costs through error, fraud, or other performance problems. The growing dependence of banking organizations on information technology emphasizes one aspect of the need to identify and control this risk.

4060.7.7 CAPITAL COMPOSITION

The analysis of capital adequacy should couple (1) a rigorous assessment of the particular measured and unmeasured risks the banking organization faces with (2) consideration of the capacity of its paid-in equity and other capital instruments to absorb economic losses. The Board's long-standing view is that common equity (that is, common stock and surplus and retained earnings) should be the dominant component of a banking organization's capital structure and that organizations should avoid undue reliance on capital elements that do not form common equity.[9] Common equity allows an organization to absorb losses on an ongoing basis and is permanently available for this purpose. Further, this element of capital best allows organizations to conserve resources when they are under stress because it provides full discretion as to the amount and timing of dividends and other distributions. Consequently, common equity is the basis on which most market judgments of capital adequacy are made.

Consideration of the capacity of a banking organization's capital structure to absorb losses should also take into account how that structure could be affected by changes in performance. For example, a banking organization experiencing a net operating loss—perhaps due to realization of unexpected losses—will not only face a reduction in its retained earnings, but also possible constraints on its access to capital markets. These constraints could be exacerbated if detrimental conversion options are exercised. A decrease in common equity, the key element of tier 1 capital, may have further unfavorable implications for a banking organization's regulatory capital position. The eligible amounts of most types of tier 1 preferred stock and tier 2 or tier 3[10] capital elements may be reduced because

8. SR-97-21 and section 2129.05 state that such changes have the effect of distorting portfolios that were previously ''balanced'' in terms of credit risk. The term ''balanced'' refers to the overall weighted mix of risks assumed in a loan portfolio by the current regulatory risk-based capital standard. This standard, for example, effectively treats the commercial loan portfolios of all banks as having ''typical'' levels of risk.

9. The Basle Committee on Banking Supervision affirmed this view in an October 1998 release, which stated that common shareholders' funds are the key element of capital. It also suggested that, to protect the integrity of an organization's tier 1 capital and its common equity base, innovative instruments included in tier 1 capital generally should be limited to 15 percent of total tier 1.

10. For the definition of tier 3 capital, see market-risk measure, Regulation Y (12 C.F.R. 225), appendix E, section 2(d).

current capital requirements limit the amount of these elements to a maximum percentage of tier 1 capital. Such adverse magnification effects could be further accentuated if adverse events take place at critical junctures for raising or maintaining capital (for example, as limited-life capital instruments are approaching maturity or new capital instruments are being issued).

4060.7.8 EXAMINER REVIEW OF INTERNAL ANALYSIS OF CAPITAL ADEQUACY

During inspections and supervisory contacts at large, complex banking organizations (LCBOs), examiners should review internal capital-assessment processes, as well as the adequacy of the organizations' capital and their compliance with regulatory capital standards. Such reviews should assess the degree to which an organization has in place, or is making progress toward implementing, a sound internal process to assess capital adequacy. Examiners should briefly describe in the inspection report the approach and internal processes that are used by the banking organization to assess capital adequacy with respect to its risks. Examiners should then document their evaluation of the adequacy and appropriateness of these processes for the size and complexity of the organization and its risk profile. Examiners should also report their assessment of the quality and timing of the organization's plans to develop and enhance its processes for evaluating capital adequacy with respect to risk. Significant deficiencies and inadequate progress in developing and maintaining capital-assessment procedures should also be noted. Examiners should discuss plans for correcting any deficiency with the organization's directors and management and, as appropriate, initiate supervisory action.

In all cases, the examiner's evaluation of the internal processes for an organization's capital adequacy review should be considered in determining its supervisory rating for management. Examiners should expect those organizations that are already active in complex activities involving the transfer of risk, such as securitization and related activities, to have sound internal processes for assessing capital adequacy in place immediately as a fundamental element of safe and sound operation.

Beyond its consideration in evaluating management, the examiner's review should also become, over time, an integral element of assessing and assigning a supervisory rating for capital adequacy. The banking organization should be developing appropriate processes for establishing capital targets and analyzing its capital adequacy. If these internal assessments suggest that capital levels appear to be insufficient to support the risks taken by the banking organization, examiners should note this finding in the inspection report; discuss plans for correcting this insufficiency with the banking organization's directors and management; and, as appropriate, initiate follow-up supervisory actions.

4060.7.8.1 Adequacy of Risk Measurement and Risk Coverage

Examiners should assess the degree to which internal targets and processes incorporate the full range of material risks faced by the banking organization. They should also assess the adequacy of risk measures used in assessing internal capital adequacy, and the extent to which these risk measures are also used operationally in setting limits, evaluating business-line performance, and evaluating and controlling risk. Measurement systems that are in place but are not integral to the banking organization's risk management should be viewed with some skepticism. Examiners should review whether an organization's approach treats similar risks across products and/or business lines consistently, and whether changes in its risk profile are timely. Finally, examiners should consider the results of sensitivity analyses and stress tests conducted by the banking organization and how these results relate to its capital plans.

4060.7.8.2 Relating Capital to the Level of Risk

In addition to complying with regulatory capital ratios, banking organizations should be able to demonstrate through internal analysis that their capital levels and composition are adequate to support the risks they face, and that these levels are properly monitored and reviewed by directors. Examiners should review this analysis, including the target levels of capital chosen, to determine whether it is sufficiently comprehensive and relevant to the current operating environment. Examiners should also consider the extent to which the banking organization has provided for unexpected events in setting its capital levels. The analysis should cover a sufficiently wide range of external conditions and scenarios, and the sophistication of techniques and stress tests used should be commensurate with the banking organization's activities. Consideration of such conditions and scenarios should take appropriate account of the possibility that adverse events may have disproportionate effects on overall capital levels, such as the effect of tier 1 limitations, adverse capital-market responses, and other magnification effects. Finally, supervisors should consider the quality of the banking organization's management information reporting and systems, the manner in which business risks and activities are aggregated, and management's record in responding to emerging or changing risks.

Finally, when performing their review, supervisors and examiners should be careful to distinguish between a comprehensive process that seeks to identify a banking organization's capital requirements on the basis of measured economic risk, and one that focuses only narrowly on the calculation and use of allocated capital or "economic value added" (EVA) for individual products or business lines for internal profitability analysis. This latter approach, which measures the amount by which operations or projects return more or less than their cost of capital, can be important to an organization in targeting activities for future growth or cutbacks. It requires, however, that the organization first determine—by some method—the amount of capital necessary for each activity or business line. The process for determining the necessary capital should not be confused with management's related efforts to measure relative returns of the firm or of individual business lines, given an amount of capital already invested or allocated. Such EVA approaches often do not meaningfully aggregate the allocated capital across business lines and risk types as a tool for evaluating the banking organization's overall capital adequacy.

4060.7.9 INSPECTION OBJECTIVES

1. To integrate an assessment of capital adequacy with a comprehensive analysis of existing risk.
2. To determine whether internal capital-management processes meaningfully tie the identification, monitoring, and evaluation of the banking organization's risks, arising from its business activities, to the determination of its capital needs.
3. To evaluate a banking organization's progress in developing a comprehensive internal process for assessing capital adequacy, and to document that progress in the inspection report.
4. To place greater reliance on internal assessments of the banking organization's processes that are used to evaluate capital adequacy, and to incorporate those assessments into a supervisory rating for management and capital adequacy.
5. For banking organizations involved in complex activities such as securitization, other secondary-market activities (including credit derivatives), or other complex transfers of risk, to determine and report whether a sound, fundamental internal process for the analysis of capital adequacy currently exists.
6. To discuss with the board of directors and management any insufficiency in capital adequacy management, recognizing the risks taken, and to reach agreements for corrective action.

4060.7.10 INSPECTION PROCEDURES

Internal Capital Assessment

1. Review the banking organization's internal capital-assessment processes as well as its capital adequacy and compliance with regulatory capital standards.
2. Briefly describe in the inspection report the approach and internal processes that are used to assess capital adequacy with respect to the banking organization's risks.
   a. Evaluate and document an assessment of the adequacy and appropriateness of these internal processes (including the extent of their contribution to the assignment of a management supervisory rating). Consider the size and complexity of the banking organization with respect to the quality and timing of its plans to develop and enhance its processes for evaluating capital adequacy with respect to risk.
   b. If the banking organization is already involved in complex activities involving the transfer of risk, such as securitization and related activities, ascertain whether sound internal processes currently exist for evaluating capital adequacy.
   c. If the internal assessments described above suggest that capital levels appear to be insufficient to support the risks taken, dis-

cuss plans for correcting this insufficiency with the directors and management, and note these finding(s) in the inspection report and initiate follow-up supervisory action(s).

Measurement and Risk Coverage

1. Determine the degree to which internal targets and processes incorporate the full range of material risks faced by the banking organization.
   a. Evaluate the adequacy of risk measures used in assessing internal capital adequacy.
   b. Assess the extent to which these risk measures are used operationally in setting limits, evaluating business-line performance, and evaluating and controlling risk.
2. Ascertain whether the banking organization's approach treats similar risks across products and/or business lines consistently, and whether changes in the risk profile are fully reflected in a timely manner.
3. Evaluate the results of sensitivity analyses and stress tests conducted by the banking organization, and determine how these results relate to its capital plans.

Relating Capital to the Level of Risk

1. Determine whether the banking organization can demonstrate through internal analysis that its target capital levels and composition are adequate to support present risks, and whether these levels are properly monitored and reviewed by the directors. Decide if the internal analysis is sufficiently comprehensive and relevant to the current operating environment.
2. Ascertain if the banking organization has provided for unexpected events in setting its capital levels.
   a. Evaluate whether the analysis covers a sufficiently wide range of external conditions and scenarios.
   b. Determine if the sophistication of techniques and stress tests used are commensurate with the banking organization's activities.
3. Evaluate the quality of the banking organization's management information reporting and systems, the manner in which business risks and activities are aggregated, and management's record in responding to emerging or changing risks.
4. Establish whether the internal capital-analysis plan is—
   a. a comprehensive process that seeks to identify the banking organization's capital requirements on the basis of measured economic risk; or
   b. a narrow process that focuses only on the calculation and use of allocated capital or ''economic value added'' (EVA) for individual products or business lines for internal profitability analysis.

The bank holding company rating system is a management information and supervisory tool which defines the condition of bank holding companies in a systematic way. The system adopts the ‘‘component’’ approach by: (1) evaluating the financial condition and risk characteristics of each major component of the bank holding company; (2) assessing the important interrelationships among the components; and (3) analyzing the strength and significance of key consolidated financial and operating performance characteristics. This approach is particularly appropriate since holding companies are to be a source of financial and managerial strength to their bank subsidiaries.

In order to arrive at an overall assessment of financial condition, the following elements of the bank holding company are evaluated and rated on a scale of one through five in descending order of performance quality:

1. Bank Subsidiaries
2. Other (Nonbank) Subsidiaries
3. Parent Company
4. Earnings—Consolidated
5. Capital Adequacy—Consolidated

The first three elements of the rating, i.e., the bank, other subsidiaries, and parent company, reflect the contribution of each to the fundamental financial soundness of the holding company. The rating of consolidated earnings and capital recognizes the importance that regulators place on these factors and their crucial role in maintaining the financial strength and supporting the risk characteristics of the entire organization.

The ability and competence of holding company management bear importantly on every aspect of holding company operations and, consequently, are included as a major factor in the evaluation of each of the five principal elements of the bank holding company rating, as well as in the assignment of an overall holding company rating.

In addition to the individual elements described above, each company is accorded an overall or composite rating, comprising both a financial and managerial component. The financial composite rating is predicated upon an overall evaluation of the ratings of each of the five principal elements of the holding company’s operations as defined above. The financial composite rating is also based upon a scale of one through five in descending order of performance quality. Thus, one represents the lowest and five the highest degree of supervisory concern. The managerial composite is predicated upon a comprehensive evaluation of holding company management as reflected in the conduct of the affairs of the bank and nonbank subsidiaries and the parent company. The managerial composite is indicated by the assignment of ‘‘S’’, ‘‘F’’, or ‘‘U’’ for, respectively, management that is found to be satisfactory, fair or unsatisfactory.

The complete rating represents a summary evaluation of the bank holding company in the form of a rating ‘‘fraction.’’ The ‘‘numerator’’ reflects the condition of the principal components of the holding company and assessments of certain key consolidated financial and operating factors. The ‘‘denominator’’ represents the composite rating, as defined in greater detail below, including both its financial and managerial components. While the elements in the ‘‘numerator’’ represent the essential foundation upon which the composite rating is based, the composite need not reflect a simple arithmetic mean or rigid formula weighting of the individual performance dimensions. Any kind of formula could be misleading and inappropriate. Rather, the composite should reflect the rater’s judgment of the overall condition of the bank holding company based upon his knowledge and experience with the company. Thus, the complete rating is displayed as follows:

$$\frac{\text{B–O–P–E–C}}{\text{F–M}}$$

The bank holding company rating system parallels the uniform interagency bank rating system to some degree by utilizing similar rating scales and performance definitions to evaluate both the individual elements and the summary or overall condition of the holding company. This framework will provide for consistency and facilitate the adoption and use of the holding company rating system. The rating system is also sufficiently flexible to allow for appropriate differences in appraising shell bank holding companies.

Since shell bank holding companies comprise the majority of supervised companies, and involve a substantial volume of banking assets, they must also be addressed by the rating system. The procedure would be similar to that so far described; however, the other (nonbank) subsidiaries, consolidated earnings, and consolidated capital ratings would be assigned a ‘‘0’’ rating since these components have little relevance for the shell company. This leaves the parent (with emphasis on cash flow and debt servicing ability), bank and composite (both financial and managerial) as remaining elements of the shell bank holding company rating.

For purposes of the rating, shell companies shall be defined as bank holding companies that have total consolidated assets less than $150 million *and* that have no significant nonbank subsidiaries. Companies with consolidated assets of $150 million or more are obliged to file consolidated FR Y–9 C and FR Y–9 LP reports and, therefore, are to be accorded a complete rating regardless of the existence of nonbank subsidiaries. (Companies of $150 million or more in assets with no significant nonbank subsidiaries would be assigned a ''0'' for the ''other subsidiary'' component of the rating.) Nonshell companies under $150 million in consolidated assets with significant nonbank assets should be assigned a rating that includes a component for the nonbank subsidiaries. Thus, such companies' ratings will include the bank, other nonbank, and parent components, but may exclude consolidated earnings and capital ratings since the needed figures may not be available. In order to avoid confusion as to which components have been rated, and to provide for computer processing, whenever a component is not rated, a ''0'' should be assigned (i.e., 2–0–3–0–0).

As this scheme suggests, elements are to be rated whenever they are relevant for a particular company. In practice, this means that: (1) all companies with $150 million or more in consolidated assets should be given a complete rating; (2) shell companies as defined above should be accorded a rating for the bank and parent components and both composites; and (3) nonshell companies under $150 million in assets *with* significant nonbank operating subsidiaries should receive a rating that includes a nonbank component. Ratings of consolidated earnings and capital may also be included for such companies at the discretion of the examiner if the figures are available or if deemed necessary to accurately reflect overall condition. Of course, a managerial composite rating should be provided for all companies.

4070.0.1 FINANCIAL COMPOSITE RATING

The five composite ratings are defined and distinguished as follows:

1. Composite 1

Bank holding companies in this group are sound in almost every respect; any negative findings are basically of a minor nature and can be handled in a routine manner. Such holding companies and their subsidiaries are resistant to external economic and financial disturbances and readily generate cash flow which is more than adequate to service their debt and other fixed obligations with no harm to subsidiaries.

2. Composite 2

Bank holding companies in this group are also fundamentally sound but may reflect modest weaknesses correctable in the normal course of business. Such holding companies and their subsidiaries generate cash flow which is adequate to service their obligations; however, areas of weakness could develop into conditions of greater concern. To the extent that the minor adjustments are handled in the normal course of business, the supervisory response is limited.

3. Composite 3

Bank holding companies in this group exhibit a combination of weaknesses ranging from fair to moderately severe. Such holding companies and their subsidiaries are less resistant to the onset of adverse business conditions and could likely deteriorate if concerted action is not effective in correcting the areas of weakness. The company's cash flow is sufficient to meet immediate obligations but, unless action is taken to correct weaknesses, parent cash flow needs could adversely affect the financial condition of the subsidiaries. Consequently, such bank holding companies are vulnerable and require more than normal supervision. Overall strength and financial capacity, however, are still such as to pose only a remote threat to the viability of the company.

4. Composite 4

Bank holding companies and their subsidiaries in this group have an immoderate volume of asset weaknesses, or a combination of other conditions that are less than satisfactory. An additional weakness may be that the holding company's cash flow needs are met only by upstreaming imprudent dividends and/or fees from its subsidiaries. Unless prompt action is taken to correct these conditions, they could impair future viability. Bank holding companies in this category require close supervisory attention and increased financial surveillance.

5. Composite 5

The volume and character of the weaknesses of bank holding companies in this category are so critical as to require urgent aid from shareholders or other sources to prevent insolvency. The imminent inability of such companies to service their fixed obligations and/or prevent capital depletion from severe operating losses places their viability seriously in doubt. Such companies require immediate corrective action and constant supervisory attention.

4070.0.2 MANAGEMENT COMPOSITE RATING

The management rating is intended to reflect an overall evaluation of the capabilities and competence of the management of the parent company and senior management of the bank(s) and nonbank subsidiaries. The assessment of management must take place within the context of the situation and circumstances surrounding the individual holding company under evaluation. Since business complexities and operating problems vary with the size and type of holding company activity, management that is competent to effectively discharge responsibilities under one set of conditions may be less competent as these conditions change. Management performance must be evaluated against virtually all factors necessary to operate the holding company's activities soundly and prudently. In addition to objective operating results, important subjective considerations in assessing management performance include the following:

1. technical competence, leadership, administrative ability, and management depth and succession
2. knowledge of and compliance with the Bank Holding Company Act and related regulations, and all other relevant laws and regulations
3. history of serving the banking needs of the community
4. ability to plan and respond to changing circumstances
5. ability of parent management to monitor and direct subsidiary operations to ensure prudent operation and compliance with established holding company policies
6. adequacy and scope of internal audit systems and controls, and evaluation of them as contained in audit reports
7. attitude toward risk as indicated by any undue reliance on resources of subsidiary bank(s) to support nonbank activities

A rating of satisfactory (S) is indicative of management that is fully effective with respect to almost all factors and that exhibits a responsiveness and ability to cope successfully with existing and foreseeable problems that may arise in the conduct of the parent's or subsidiaries' affairs. Management rated satisfactory is knowledgeable concerning relevant laws and regulations, and has demonstrated an understanding of the need to insulate the subsidiary bank(s) from any undue risk associated with nonbank activities. A rating of fair (F) reflects performance that is lacking in some measure of ability that would be desirable to meet responsibilities necessitated by various situations which management must address. Performance is characterized by modest talent when above-average abilities are called for or by distinctly below-average talent for the type and size of organization. Thus, management's responsiveness or ability to correct less than satisfactory conditions may be lacking. Moreover, such management may reflect a less than satisfactory understanding of relevant holding company laws and regulations. A rating of unsatisfactory (U) is indicative of management that is demonstrably inferior or incompetent in relation to the responsibilities or problems it faces. This rating may also be indicative of management that has demonstrated an inclination to subject the subsidiary bank(s) to excessive or unwarranted risk as a result of the activities of the nonbank subsidiaries. In these cases, problems resulting from management weakness are of such severity that management must be strengthened or replaced before sound conditions can be brought about.

4070.0.3 PERFORMANCE EVALUATION

The five components of holding company operations (bank subsidiaries, nonbank subsidiaries, parent only, consolidated earnings, and capital) are to be evaluated on a scale of one to five. The following is a description of the gradations to be utilized in assigning performance ratings:

1. Rating No. 1 indicates strong performance. It is the highest rating and is indicative of performance that is significantly higher than average and that obviates the need for supervisory concern.
2. Rating No. 2 reflects satisfactory performance. It reflects performance that is average or above; it includes performance that adequately provides for the safe and sound operation of the bank holding company and its subsidiaries.
3. Rating No. 3 represents performance that is flawed to some degree; as such, it is considered fair. It is neither satisfactory nor marginal but is characterized by performance of below-average quality. Such performance requires man-

agement attention due to the distinct possibility of further deterioration.

4. Rating No. 4 represents marginal performance which is significantly below average; if left unchecked, such performance might evolve into weaknesses or conditions that could threaten the viability of the institution.

5. Rating No. 5 is considered unsatisfactory. It is the lowest rating and is indicative of performance that is critically deficient and in need of immediate remedial attention. Such performance by itself, or in combination with other weaknesses, could threaten the viability of the institution.

4070.0.4 BANK CONDITION

The bank condition component is intended to reflect the overall condition of the banking subsidiary or subsidiaries. For this purpose, use is made of the subsidiary bank CAMELS composite rating(s). In the case of multibank companies, each bank's composite rating should be weighted according to its asset size to arrive at an average bank composite rating. Weighting implies that, in most cases, the bank condition component in the holding company rating system will usually reflect the lead bank's composite according to the Uniform Financial Institutions Rating System (CAMELS).

To highlight the presence of one or more problem bank(s) in a multibank holding company whose bank condition component, based on weighted averages, might not otherwise reveal their presence (that is, bank condition ratings of 1, 2, or 3), a problem identifier (P) would be attached to the bank condition rating (for example, 1P, 2P, 3P). Thus, 2P would indicate that, while on balance the banking subsidiaries are rated satisfactory, there exists a problem bank (composite 4 or 5) among the banking subsidiaries. The problem identifier is unnecessary when the bank condition component is rated 4 or 5. Although the bank condition component is a weighted average, it can be adjusted for subjective, judgmental reasons at the discretion of the rater.

4070.0.5 OTHER (NONBANK) SUBSIDIARIES

The other subsidiaries rating is designed to assess the condition of the nonbank subsidiaries in the context of their overall impact on the financial condition of the holding company and the subsidiary bank(s). In so doing, emphasis must be placed on the asset quality of credit-extending subsidiaries and the profitability and operating soundness of non-credit-extending subsidiaries. The evaluation of other subsidiaries should concentrate on the quality and condition of nonbank assets defined as—

1. the underlying assets of credit-extending nonbank subsidiaries; and
2. the parent's investment in and advances to non-credit-extending subsidiaries.

The inclusion of No. 2 in the definition acknowledges the fact that poorly run servicing or other non-credit-extending subsidiaries can pose significant risk exposure to the holding company, which should be explicitly reflected in the rating. Such exposure might result, for example, from operating losses or off-balance-sheet items such as guarantees. In many cases, since non-credit-extending subsidiaries are not heavy borrowers from external sources, the parent's investments in and advances to such companies will serve as a proxy for the magnitude of their operations. The degree of risk associated with the non-credit-extending subsidiaries may be quantified for the purpose of analyzing nonbank asset quality by classifying the parent's investments in and advances to such subsidiaries if the financial condition of the subsidiaries or the characteristics of their assets permits a meaningful conventional asset classification. This might be the case, for instance, if the subsidiaries' historical earnings record has not, in the examiner's judgment, adequately accounted for the development of clearly identifiable loss potential associated with the entity's operations. If a conventional classification of the investments in or advances to the non-credit-extending subsidiaries is not considered suitable, the examiner should identify and fully analyze the risk exposure posed by the non-credit-extending subsidiaries in the inspection report, specifically in the open section narrative analysis of financial condition. Any classifications or analysis of the parent's investments in and advances to non-credit-extending subsidiaries should be presented in the open section of the report and considered in arriving at the nonbank subsidiary component of the rating system. In assessing the investment in or advance to a non-credit-extending subsidiary, the analysis should parallel that for any asset appraisal, with particular attention given to the subsidiary's purpose and operating efficiency, management reporting procedures, and profitability. Also, foreign subsidiaries should be assessed in a manner similar to that for the company's domestic nonbank investments.

The degree of risk associated with credit-extending subsidiaries is determined by the classification of the underlying assets of the subsidiaries. The severity of both problem investments and classified assets should be reflected by using the following weights: 100 percent of "loss," 50 percent of "doubtful," and 20 percent of "substandard."

A major step in rating nonbank activities is first to appraise their significance to the company's overall financial performance. The appraisal should focus on the potential loss exposure these activities pose to the bank holding company. One way of estimating this exposure is to compare total nonbank assets as defined above, plus any additional exposure not reflected in total assets, to total consolidated capital. As a general rule, other subsidiaries should be rated whenever nonbank assets exceed 5 percent of consolidated capital or $10 million, whichever is lower. If this condition is not met, a "0" should be entered for the rating of other subsidiaries. Other subsidiary assets that do not meet the significance conditions may be rated if, in the opinion of the rater, not to do so would significantly misrepresent the condition of the holding company.

When a rating is assigned to nonbank assets, considerations should include—

1. the relationship of problem investments in and advances to non-credit-extending subsidiaries plus classified assets in the credit-extending nonbank subsidiaries to total nonbank assets as defined above;
2. the relationship of problem investments and advances plus classified assets to the sum of parent company and nonbank valuation reserves and ex-bank consolidated equity capital, or to any more appropriate or refined capital index or measure, if warranted;
3. the ability of nonbank management to supervise and exercise overall control over nonbank subsidiary operations in order to ensure prudent operation, sound asset administration, and compliance with established holding company policies and relevant laws and regulations; and
4. management attitudes toward risk as indicated by any undue reliance on resources of affiliated bank(s) to support nonbank subsidiaries.

The specific delineation of the above considerations is not meant to preclude taking into account other relevant factors such as profitability, operating efficiency, management controls, reporting procedures, and any other relevant factors that, in the judgment of the rater, are necessary to assess accurately the condition of the nonbank subsidiaries.

An asset quality rating of 1 obviates the need for supervisory concern due to the existence of sound, well-managed nonbank operations, investments, and loan portfolios. A 2 rating may indicate the existence of some asset problems or other minor operational weaknesses, but still represents fundamentally sound, well-managed asset conditions warranting minimal supervisory concern. A 2 may also reflect asset problems that are clearly of little supervisory concern, given their unlikely impact on the bank(s) and the size and overall strength of the holding company. Problems associated with a 2 rating can readily be resolved in the normal course of business. A 3 rating represents the existence of deficiencies such as a significant upward trend in classifications, management control weaknesses, or other problems that, if left unchecked, could cause substantial deterioration and have an adverse impact on the banking subsidiaries. A 4 rating represents an increased need for supervisory surveillance and concern due to any combination of poor operations, weak management, or severe asset problems that are currently having a serious impact on the holding company or the banking subsidiaries. A 5 rating applies to a critical level of nonbank problems.

4070.0.6 PARENT COMPANY

The parent company rating reflects the financial condition of the parent company by focusing on (1) its ability to readily service its debt and other fixed obligations and (2) the quality of direct parent credit extensions to entities that are not subsidiaries of the holding company. (Investments in and advances to holding company subsidiaries are treated above in connection with the evaluation of the nonbank subsidiaries.)

In analyzing the parent company, consideration should be given to its ability to generate adequate cash flow from its ongoing operations and the liquidity of its assets. Potential sources of cash flow to the parent include, for example, bank and nonbank dividends, loan repayments, management and service fees, tax benefits, interest income, and liquidation of assets; cash needs would include interest and operating expenses, debt retirement, and preferred and common stock dividends. The analysis should also take into account the capacity of the parent company to safely obtain liquidity from its subsidiaries by, for example, the prudent upstreaming of additional subsidiary dividends.

Factors which should be incorporated in the analysis of the parent company include—

1. volume and composition of parent-company debt, and cash-flow needs deriving therefrom;
2. comparison of the maturities of parent-company borrowings with the maturities of the investments which they fund;
3. quality of credits to nonaffiliated companies;
4. ability to readily convert assets to cash without incurring serious loss or adversely affecting the banking subsidiaries;
5. ability of management to plan for liquidity and cash-flow needs and respond to changing conditions in the markets for short-term funds;
6. ability of the company to obtain long- and short-term funds on reasonable terms, and the existence of firm backup lines of credit;
7. reasonableness of any bank management or service fees paid to the parent;
8. demonstrated performance in meeting past and current servicing requirements; and
9. ability of parent management to supervise and exercise overall control over subsidiary and parent operations to ensure prudent operation, sound asset administration, and compliance with established holding company policies and relevant laws and regulations.

Also of importance, but treated elsewhere, are the use of parent debt to fund equity investments in subsidiaries, the adequacy of the company's capital and capital plans, and the strength of corporate earnings.

The shell company would be appraised in a manner similar to that outlined above. Cash flow to service parent-company debt would be the major aspect of the analysis, with attention focused on its effects on the subsidiary bank's capital position. In addition, the amount of parent-company debt should be compared to the parent's proportionate interest in the subsidiary bank's equity capital. This serves as a good estimate of the company's ability to carry existing debt or to borrow additional funds should an unexpected need arise.

A parent company rating of 1 indicates that the holding company can readily generate cash flow which is more than adequate to service its debt obligations and other cash-flow needs and provide for the smooth rollover of debt without adverse effect on its subsidiaries. The rating also reflects good management and the absence of significant asset problems. A 2 rating, while reflecting a fundamentally sound situation, indicates a possible trend toward tighter liquidity due to lower earnings, asset quality, or other relevant operating indices. A rating of 3 represents a decidedly tight, but still manageable, cash-flow situation. The company will likely have little or no liquidity in its asset portfolio and/or be overly dependent on potentially harmful dividends and fees from its subsidiaries. Weak earnings might also be expected to complicate such a situation. The 3 rating would reflect increasing difficulty for the parent company in obtaining short-term funds on favorable terms. A rating of 4 indicates serious cash-flow problems caused or exacerbated by severe asset deterioration or poor or no corporate earnings. Companies so rated may be seriously draining funds from bank subsidiaries to service cash-flow needs and may be completely unable to serve as a source of funds or financial strength to their subsidiaries. A rating of 5 may represent an inability to enter money markets. Moreover, the problems represented by a rating of 5 would reflect an imminent danger of default or insolvency of the parent company.

4070.0.7 EARNINGS—CONSOLIDATED

The rating of earnings is based on the assessment of fully consolidated profitability. This approach is appropriate since consolidated earnings serve as a source of financial strength and capital growth for the entire organization.

Profitability has two dimensions, quantity and quality, both of which must be incorporated in the evaluation of earnings. Quantity refers to the absolute level of net income and its adequacy in relation to the considerations listed below. The appraisal of quality is an attempt to determine the strength of operating earnings (i.e., the ability to generate ongoing revenues and hold down expenses), and the degree to which earnings reflect the impact of unusually large securities gains or losses, unusual tax items (i.e., credits, carryforwards, etc.), or other large, nonrecurring, extraordinary gains or losses. Quality of earnings also refers to the effect on net income of adequately providing additions to the loan-loss reserve to properly recognize the impact of poor, overstated, or loss assets carried on the balance sheet. Other things being equal, consolidated net income that relies unduly on unusually large, nonrecurring gains or that fails to reflect adequate loan-loss provisions is of lower quality than net income of equal magnitude that reflects strong operations and adequate loss provisions. On the other hand, the concept of quality "works both ways." While care must be taken to avoid attempting to predict the future, net income that otherwise appears somewhat low may be of high quality and, consequently, suggests stronger future net income. This would especially be the case if current earnings reflected a level of charge-offs that was not expected to recur, given the relatively high quality of the company's assets.

Generally, consolidated earnings since the prior inspection will be rated with emphasis given to the most recent year's performance. In light of the above discussion, earnings will be rated with respect to the following considerations:

1. the return on consolidated assets, historical earnings trends, and peer-group comparisons
2. the quality of earnings as reflected by (a) extent of reliance on nonrecurring gains or losses or unusual tax effects, and (b) the sufficiency of loss provisions in view of the condition of the asset portfolio and the adequacy of the loan-loss reserves
3. the ability to adequately cover charge-offs, maintain public confidence, and provide for the safe, ongoing operation of the company
4. the ability of management to plan and devise realistic earnings projections in light of the risk structure and quality of assets
5. the outlook for earnings as implied by the current risk structure and quality of assets
6. the ability of earnings to provide for the growth of capital in light of recent and planned asset growth

Inclusion of no. 6 above is not meant to suggest that the level or adequacy of current capital determines the rating for earnings; capital per se is treated elsewhere. It simply recognizes that retained earnings is a primary source of capital. If a company opts for rapid growth, its earnings must enable it to raise the necessary capital either through retention or by permitting ease of entry into the capital markets. While this notion must be kept in mind in evaluating a company's profitability, it is quite possible for a company to simultaneously have low capital and good earnings or vice versa.

Earnings rated 1 are sufficient to make full provision for the absorption of losses and accretion of capital when due consideration is given to asset quality and bank holding company growth. Generally, holding companies so rated will have earnings well above peer-group averages. A company whose earnings are relatively static or even moving downward may receive a 2 rating, provided its level of earnings is adequate in view of the considerations discussed above. Normally, companies so rated will have earnings that are in line with or slightly above peer-group norms. A 3 rating should be accorded earnings that are not fully adequate to make sufficient provisions for the absorption of losses and the accretion of capital in relation to company growth. The earnings pictures of such companies may be further clouded by static or inconsistent earnings trends, chronically insufficient earnings, or less than satisfactory asset quality. Earnings of such companies are generally below peer-group averages. Earnings rated 4, while generally positive, are clearly not adequate to make full provision for losses and the necessary accretion of capital. Companies with earnings rated 4 may be characterized by erratic fluctuations in net income, poor earnings (and the likelihood of the development of a further downward trend), intermittent losses, chronically depressed earnings, or a substantial drop from the previous year. Earnings of such companies are ordinarily substantially below peer-group averages. Bank holding companies with earnings accorded a 5 rating should be experiencing losses or reflecting a level of earnings that is worse than that defined in rating 4 above. Such losses, if not reversed, could represent a distinct threat to the holding company's solvency through the erosion of capital.

4070.0.8 CAPITAL ADEQUACY—CONSOLIDATED

Capital is to be evaluated with regard to the volume and risk of the operations of the consolidated corporation. Emphasis on capital from the standpoint of the consolidated entity is appropriate since holding company management exercises some discretion with respect to the allocation of capital resources within the corporation. Thus, it is the holding company's capital on a consolidated basis that must serve as the ultimate source of support and strength to the entire corporation.

To be considered adequate, holding company capital must (1) support the volume and risk characteristics of all parent and subsidiary activities; (2) provide a sufficient cushion to absorb unanticipated losses arising from holding company and subsidiary activities; (3) support the level and composition of corporate and subsidiary borrowing; and (4) serve as a source of strength by providing an adequate base for the growth of risk assets and permitting entry into the capital markets as the need arises. An essential step in the analysis of capital is the assessment of the risk characteristics and capital requirements deriving from the lending activities and operations of the parent and each of the operating subsidiaries.

The analysis of capital should incorporate the following considerations:

1. the relationship of consolidated capital to risk-weighted assets as reflected in (a) the ratio of tier 1 capital to total risk-weighted assets, and (b) the ratio of total capital to risk-weighted assets
2. the capital requirements that derive from the asset quality and risk associated with each holding company activity
3. the relationship of consolidated debt to tier 1 capital
4. the extent of reliance on long-term debt in the capital structure
5. the extent of the use of debt at the parent level to fund capital investments in subsidiaries
6. the trends of indices of capital adequacy and peer-group ratio comparisons
7. the management's ability to devise adequate capital plans and retention policies in light of any capital deficiency and/or planned expansion of risk assets
8. the capacity to enter capital markets or tap other sources of long-term debt and equity
9. the extent of any balance-sheet concentration in any category or related categories of intangible assets, particularly those in excess of the 25 percent threshold, including the reasonableness of the amortization periods of those assets
10. the relationship of high or inordinate off-balance-sheet risk exposure to tier 1 capital
11. the nature and amount of nonbanking activities in relationship to tier 1 and total capital levels

4070.0.8.1 Rating Consolidated Capital

The capital adequacy guidelines discussed in sections 4060.3 and 4060.4 are to be used in the inspection of bank holding companies. Holding company inspections should contain information on the principal subsidiary banks' capital positions. Inspection reports should contain critical comments on the capital positions of individual subsidiary banks supervised by other agencies only if the criticisms are consistent with the other agencies' positions as described in examination reports, or if they have first been discussed with the primary supervisor of the bank. Inspection reports should address any instances of noncompliance with capital commitments made in connection with the Federal Reserve's approval of bank holding company applications.

While the ratio guidelines are to be applied to both the bank and its holding company, it is the consolidated entity whose financial condition and strength will ultimately determine the condition of the banking organization. It is recognized that, to some extent, strong consolidated holding company capital positions may offset minor deficiencies in the bank subsidiaries. However, bank capital positions, particularly those that reflect double leveraging, generally do not alleviate consolidated holding company capital deficiencies.

4070.0.9 DISCLOSURE OF NUMERIC BOPEC COMPOSITE AND COMPONENT INSPECTION RATINGS

It is a long-standing policy of the Federal Reserve to discuss fully and clearly in examination and inspection reports, and in meetings with senior management and boards of directors, supervisory issues, problems, or concerns relating to the banking organizations under the System's supervision. Beginning on December 16, 1988, the Board authorized examiners to disclose to the senior officials and boards of directors of inspected bank holding companies the composite numeric rating assigned in an inspection as part of the inspection report process (see SR-88-37). Generally, the Federal Reserve has also provided senior management and directors with the word descriptions that consist of a single word corresponding to the numeric component ratings assigned.

In an effort to further strengthen communication with supervised banking organizations, beginning on January 1, 1997, the Federal Reserve will also provide the numeric and the assigned alphabetic component ratings under various supervisory rating systems[1] to senior manage-

1. The disclosure of the composite and supporting component rating applies to the following rating systems:
- CAMELS (state member banks)
- BOPEC (bank holding companies)

continued

ment and directors (see SR-96-26 and section 5010.4). Such disclosure includes the alphabetic component ratings assigned to management under the BOPEC rating system. Building on existing practice, this step is intended to better focus management's attention on possible areas of weakness and the need for timely corrective actions.

The disclosure of the rating and its components should be made in the Examiner's Comments and Matters Requiring Special Board Attention, core page 1 of inspection reports; in the summary reports prepared for boards of directors of inspected institutions; and in meetings with senior management and directors. In conjunction with disclosing the ratings and their components, examiners and/or supervisory officials should clearly explain their meaning.

In the context of the exit meeting, the examiner should discuss key overall inspection findings, including preliminary composite and component numeric ratings. Examiner-assigned ratings are subject to a review by Reserve Bank supervisory officials, and final ratings are to be included in the inspection report. *In disclosing composite and component ratings, the examiner-in-charge should remind management that the ratings assigned are a part of the findings of the inspection and are privileged and confidential under applicable law.* If composite and component ratings are changed between inspections as a result of off-site analysis, the board of directors and management should be informed of the change. Ratings should not be disclosed to the bank holding company's directors and management until preliminary approval has been received from the appropriate senior Reserve Bank supervisory officials.

- CAMEO (Edge and agreement corporations and overseas subsidiaries of U.S. banks)
- ROCA (U.S. branches and agencies of foreign banking organizations)
- the Uniform Interagency Trust Rating System
- the Uniform Interagency Rating System for Data Processing Operations

The Federal Reserve places significant supervisory emphasis on the importance of sound risk-management processes and strong internal controls when evaluating the activities of banking organizations it supervises. Properly managing risks is always critical to the conduct of safe and sound banking activities, and it is even more important as new technologies, product innovation, and the size and speed of financial transactions change the nature of banking markets.

A bank holding company's failure to establish a management structure that adequately identifies, measures, monitors, and controls the risks involved in its various products and lines of business has long been considered unsafe and unsound conduct. Accordingly, while a bank holding company's financial performance is an important indicator of the adequacy of management, it is essential that examiners give significant weight to the quality of risk-management practices and internal controls when they evaluate the management and overall financial condition of banking organizations.

Consistent with the greater supervisory emphasis given to risk management in Federal Reserve examination and supervisory policy statements, System examiners are to assign a formal supervisory rating to the adequacy of a bank holding company's risk-management processes, including its internal controls. This step is a natural extension of current procedures that incorporate an assessment of risk management and internal controls during each on-site, full-scope inspection. The specific rating of risk management and internal controls should be given significant weight when evaluating management under the bank holding company (BOPEC) rating system. Like the components of this system, the risk-management rating should be based on a five-point numerical scale.

This rating of the risk-management process is designed to bring together and summarize much of the analysis of and many of the findings about a bank holding company's process for managing and controlling risks, which are an important part of the examiner's review of these individual areas. The formal rating is intended to highlight and incorporate both the quantitative and qualitative aspects of an examiner's review of an organization's overall process for identifying, measuring, monitoring, and controlling risk and to facilitate appropriate follow-up action.

The overall profitability, asset quality, and capital adequacy of a bank or bank holding company should continue to influence the examiner's assessment of management, but these indicators can to some extent be affected, either favorably or adversely, by factors outside management's control. For this reason, the specific evaluation of the risk-management process should be a primary factor when rating management, especially in the case of larger banking organizations whose activities and structures require more formal and extensive procedures.

Examiners should apply this guidance flexibly to appropriately reflect the banking organization's circumstances and the nature, scope, and complexity of its operations. Risk-management ratings should be assigned to all bank holding companies, regardless of their size.

Examiners should discuss in a clear and straightforward manner in the appropriate open sections of the inspection report the nature and severity of any problems or deficiencies found and the steps required to correct them, particularly if the risk-management rating is less than satisfactory. Serious lapses or deficiencies in internal controls, including inadequate separation of duties, can constitute an unsafe and unsound practice and possibly lead to significant losses or otherwise compromise the financial integrity of the organization. If appropriate, the bank holding company's directors and officers should be advised that the Federal Reserve will initiate supervisory actions if its failure to separate critical operational duties creates the potential for serious losses or if material deficiencies or situations that threaten the safe and sound conduct of its activities are not adequately addressed in a timely manner. Such supervisory actions may include formal enforcement actions against the bank holding company, its responsible officers and directors, or both and would require the immediate implementation of all necessary corrective measures.

4070.1.1 ELEMENTS OF RISK MANAGEMENT

When rating the quality of risk management at bank holding companies as part of the evaluation of the overall quality of management, examiners should place primary consideration on findings relating to the following elements of a sound risk-management system:

- active board and senior management oversight
- adequate policies, procedures, and limits
- adequate risk measurement, monitoring, and management information systems
- comprehensive internal controls

Examiners should recognize that the considerations specified in SR-95-51 are intended only to assist in the evaluation of risk-management practices. *They are not a checklist of requirements for an individual organization*. Moreover, while all bank holding companies should be able to assess the major risks of the consolidated organization, examiners should expect parent companies that centrally manage the operations and functions of their subsidiary banks to have more comprehensive, detailed, and developed risk-management systems than companies that delegate the management of risks to relatively autonomous banking subsidiaries.

4070.1.1.1 Active Board and Senior Management Oversight

In assessing the quality of the oversight by boards of directors and senior management, examiners should consider whether the bank holding company follows policies and practices such as those described below:

- The board and senior management have identified and have a clear understanding and working knowledge of the types of risks inherent in the bank holding company's activities, and they make appropriate efforts to remain informed about these risks as financial markets, risk-management practices, and the bank holding company's activities evolve.
- The board has reviewed and approved appropriate policies to limit risks inherent in the bank holding company's lending, investing, trading, trust, fiduciary, and other significant activities or products.
- The board and management are sufficiently familiar with and are using adequate record-keeping and reporting systems to measure and monitor the major sources of risk to the organization.
- The board periodically (1) reviews and approves risk exposure limits to conform with any changes in the bank holding company's strategies, (2) addresses new products, and (3) reacts to changes in market conditions.
- Management ensures that its lines of business are managed and staffed by personnel with knowledge, experience, and expertise consistent with the nature and scope of the bank holding company's activities.
- Management ensures that the depth of staff resources is sufficient to operate and soundly manage the bank holding company's activities and that its employees have the integrity, ethical values, and competence that are consistent with a prudent management philosophy and operating style.
- All levels of management adequately supervise the day-to-day activities of officers and employees, including management supervision of senior officers or heads of business lines.
- Management is able to respond to risks that may arise from changes in the competitive environment or from innovations in markets in which the organization is active.
- Before embarking on new activities or introducing new products, management identifies and reviews all risks associated with the activity or product and ensures that the infrastructure and internal controls necessary to manage the related risks are in place.

4070.1.1.2 Adequate Policies, Procedures, and Limits

A bank holding company's board of directors and senior management should tailor their risk-management policies and procedures to the types of risks that arise from the organization's activities. The following guidelines should assist examiners in evaluating the adequacy of a bank holding company's policies, procedures, and limits:

- The bank holding company's policies, procedures, and limits provide for adequate identification, measurement, monitoring, and control of the risks posed by its lending, investing, trading, trust, fiduciary, and other significant activities.
- The policies, procedures, and limits are consistent with management's experience level, the organization's stated goals and objectives, and its overall financial strength.
- Policies clearly delineate accountability and lines of authority across the organization's activities.
- Policies provide for the review of new activities of the organization to ensure that the infrastructures necessary to identify, monitor,

and control risks associated with an activity are in place before the activity is initiated.

4070.1.1.3 Adequate Risk Monitoring and Management Information Systems

Effective risk monitoring requires banking organizations to identify and measure all material risk exposures. Consequently, risk-monitoring activities must be supported by information systems that provide senior managers and directors with timely reports on the financial condition, operating performance, and the risk exposure of the consolidated organization, as well as with regular and sufficiently detailed reports for line managers engaged in the day-to-day management of the organization's activities.

In assessing the adequacy of a bank holding company's measurement and monitoring of risk and its management reports and information systems, examiners should consider whether the following conditions exist:

- The bank holding company's risk-monitoring practices and reports address all of its material risks.
- Key assumptions, data sources, and procedures used in measuring and monitoring risk are appropriate and adequately documented and tested for reliability on an ongoing basis.
- Reports and other forms of communication are consistent with the bank holding company's activities; are structured to monitor exposures and compliance with established limits, goals, or objectives; and, as appropriate, compare actual versus expected performance.
- Reports to management or the directors are accurate and timely and contain sufficient information for decision makers to identify any adverse trends and to evaluate adequately the level of risk the bank holding company faces.

4070.1.1.4 Adequate Internal Controls

A bank holding company's internal control structure is critical to its safe and sound functioning generally and to its risk-management system, in particular. Establishing and maintaining an effective system of controls, including the enforcement of official lines of authority and the appropriate separation of duties—such as trading, custodial, and back-office—is one of management's more important responsibilities.

Appropriate segregation of duties is a fundamental and essential element of a sound risk-management and internal control system. Failure to implement and maintain an adequate separation of duties can constitute an unsafe and unsound practice and possibly lead to serious losses or otherwise compromise the financial integrity of the bank holding company. Serious lapses or deficiencies in internal controls, including inadequate segregation of duties, may warrant supervisory action, including formal enforcement action.

When properly structured, a system of internal controls promotes effective operations and reliable financial and regulatory reporting; safeguards assets; and helps to ensure compliance with relevant laws, regulations, and bank holding company policies. Ideally, internal controls are tested by an independent internal auditor who reports directly to either the bank holding company's board of directors or its designated committee, which is typically the audit committee. Personnel who perform these reviews should generally be independent of the function they are assigned to review. Given the importance of appropriate internal controls to banking organizations of all sizes and risk profiles, the results of audits or reviews, whether conducted by an internal auditor or other personnel, should be adequately documented, as should management's responses to them. In addition, communication channels should exist that allow negative or sensitive findings to be reported directly to the board of directors or the relevant board committee.

In evaluating the adequacy of a bank holding company's internal controls and audit procedures, examiners should consider whether the following conditions are met:

- The system of internal controls is appropriate to the type and level of risks posed by the nature and scope of the organization's activities.
- The bank holding company's organizational structure establishes clear lines of authority and responsibility for monitoring adherence to policies, procedures, and limits.
- Reporting lines provide sufficient independence of the control areas from the business lines, and they provide adequate separation of duties throughout the organization, such as those relating to trading, custodial, and back-office activities.
- Official organizational structures reflect actual operating practices.
- Financial, operational, and regulatory reports are reliable, accurate, and timely. When appli-

cable, exceptions are noted and promptly investigated.
- Adequate procedures exist for ensuring compliance with applicable laws and regulations.
- Internal audit or other control review practices provide for independence and objectivity.
- Internal controls and information systems are adequately tested and reviewed; the coverage, procedures, findings, and responses to audits and review tests are adequately documented; identified material weaknesses are given appropriate and timely high-level attention; and management's actions to address material weaknesses are objectively verified and reviewed.
- The audit committee or board of directors reviews the effectiveness of internal audits and other control review activities regularly.

4070.1.2 RATING DEFINITIONS

The rating for risk management is based on a scale of one through five in ascending order of supervisory concern. Examiners should assign this rating to reflect their findings in all four of the elements of sound risk management described above. The risk-management rating should be reflected in the overall ''Management'' rating of the bank holding company and should be consistent with the following criteria:

Rating 1 (Strong). A rating of 1 indicates that management effectively identifies and controls all major types of risk posed by the bank holding company's activities, including those from new products and changing market conditions. The board and management are active participants in managing risk and ensure that appropriate policies and limits exist, and the board understands, reviews, and approves them. Policies and limits are supported by risk-monitoring procedures, reports, and management information systems that provide management and the board with the necessary information and analysis to make timely and appropriate responses to changing conditions.

Internal controls and audit procedures are sufficiently comprehensive and appropriate to the size and activities of the bank holding company. There are few noted exceptions to the organization's established policies and procedures, and none is material. Management effectively and accurately monitors the condition of the organization consistent with standards of safety and soundness and in accordance with internal and supervisory policies and practices. Risk management is considered fully effective to identify, monitor, and control risks to the bank holding company.

Rating 2 (Satisfactory). A rating of 2 indicates that the bank holding company's management of risk is largely effective but lacking to some modest degree. It reflects a responsiveness and ability to cope successfully with existing and foreseeable exposures that may arise in carrying out the organization's business plan. While the bank holding company may have some minor risk-management weaknesses, these problems have been recognized and are being addressed. Overall, board and senior management oversight, policies and limits, risk-monitoring procedures, reports, and management information systems are considered satisfactory and effective in maintaining a safe and sound bank holding company. Generally, risks are being controlled in a manner that does not require additional or more than normal supervisory attention.

Internal controls may display modest weaknesses or deficiencies, but they are correctable in the normal course of business. The examiner may have recommendations for improvement, but the weaknesses noted should not have a significant effect on the safety and soundness of the organization.

Rating 3 (Fair). A rating of 3 signifies that risk-management practices are lacking in some important ways and, therefore, are a cause for more than normal supervisory attention. One or more of the four elements of sound risk management is considered fair and has precluded the organization from fully addressing a significant risk to its operations. Certain risk-management practices are in need of improvement to ensure that management and the board are able to identify, monitor, and adequately control all significant risks to the organization. Weaknesses may include continued control exceptions or failures to adhere to written policies and procedures, which could have adverse effects on the organization.

The internal control system may be lacking in some important respects, particularly as indicated by continued control exceptions or by the failure to adhere to written policies and procedures. The risks associated with the internal control system could have adverse effects on the safety and soundness of the bank holding company if corrective actions are not taken by management.

Rating 4 (Marginal). A rating of 4 represents marginal risk-management practices that generally fail to identify, monitor, and control significant risk exposures in many material respects. Generally, such a situation reflects a lack of adequate guidance and supervision by management and the board. One or more of the four elements of sound risk management is considered marginal and requires immediate and concerted corrective action by the board and management. A number of significant risks to the organization have not been adequately addressed, and the risk-management deficiencies warrant a high degree of supervisory attention.

The bank holding company may have serious identified weaknesses, such as an inadequate separation of duties, that require substantial improvement in its internal control or accounting procedures or in its ability to adhere to supervisory standards or requirements. Unless properly addressed, these conditions may result in unreliable financial records or reports or operating losses that could seriously affect the safety and soundness of the bank holding company.

Rating 5 (Unsatisfactory). A rating of 5 indicates a critical absence of effective risk-management practices to identify, monitor, or control significant risk exposures. One or more of the four elements of sound risk management is considered wholly deficient, and management and the board have not demonstrated the capability to address deficiencies.

Internal controls may be sufficiently weak as to seriously jeopardize the continued viability of the bank holding company. If such weaknesses are not already evident, there is an immediate concern as to the reliability of accounting records and regulatory reports and about potential losses that could result if corrective measures are not taken immediately. Deficiencies in the bank holding company's risk-management procedures and internal controls require immediate and close supervisory attention.

4070.1.3 REPORTING CONCLUSIONS

For bank holding companies, the separate numerical rating for risk management and the rationale for the rating assigned should be included as "Risk-Management Rating: (numerical rating)" and discussed on confidential page B, Condition of Bank Holding Company, of the bank holding company inspection report, and should also be reflected in the examiner's overall rating of management. Comments, conclusions, and criticisms relating to a bank holding company's risk-management process should be brought to the attention of management and included on the Policies and Supervision page[1] of the bank holding company inspection report, as well as on Core Page 1, Examiner's Comments and Matters Requiring Special Board Attention, if considered appropriate and particularly if the rating is less than satisfactory.

In inspection reports and transmittal letters to boards of directors of bank holding companies, reference should be made specifically to the types and nature of corrective actions that bank holding companies need to take to address noted risk-management and internal control deficiencies. When appropriate, bank holding companies should also be advised that the Federal Reserve will initiate supervisory actions if the failure to separate critical operational duties creates the potential for serious losses or if material deficiencies or situations that threaten the safe and sound conduct of their activities are not adequately addressed in a timely manner. Such supervisory actions may include formal enforcement actions against the bank holding company (or a state member bank), its responsible officers and directors, or both and would require the immediate implementation of all necessary corrective measures.

1. If a problem area is cited within the Core Section, the respective supporting report pages (the Policies and Supervision page) are to be included in the report to support the critical comments. See section 5010.1.3.

Supervisory ratings should be revised whenever there is strong evidence that the financial condition or risk profile of an institution has significantly changed.[1] In a risk-focused and continuous-supervision environment, supervisory ratings should be viewed as a continuum, rather than as a point-in-time assessment of an institution's financial condition.[2] It is important that supervisory ratings reflect a current assessment of an institution's financial condition and risk profile. The ratings can affect risk-based deposit insurance premiums; statutory and regulatory requirements, including applications and the prompt-corrective-action provisions of the Federal Deposit Insurance Act; and supervisory reporting and inspection/examination requirements, as well as other factors. While supervisory ratings are most frequently revised as a result of on-site supervisory activities, other sources of information reviewed off-site may also indicate the need for a rating change.[3] See SR-99-17.

In addition, when a component of one of the supervisory rating systems is changed, the Reserve Bank must also reaffirm or revise the other component ratings and the composite rating, based upon available information at that time. The factors contributing to a change in the rating of a selected component can affect one or more of the other components in the rating system, as well as the composite rating. Accordingly, if there is a compelling reason to change a selected component rating, all of the other components in the supervisory rating system must be either reaffirmed or revised. As applicable for bank holding companies and state member banks, the risk-management rating must also be reaffirmed or revised when a CAMELS or BOPEC rating is changed.[4]

Any change to a component or composite rating and the rationale for that change must be communicated in writing via a letter or report to the board of directors of the affected institution (or to the senior U.S. management official in the case of a U.S. branch, agency, office, or nonbank subsidiary of a foreign bank) and to the appropriate state and federal supervisory agencies.

1. SR-99-17 supersedes SR-92-31, which suspended the practice of revising CAMELS ratings for state member banks between examinations.

2. The procedures in SR-99-17 pertain to supervisory rating systems for bank holding companies (BOPEC); state member banks (CAMELS); U.S. branches and agencies of foreign banking organizations (ROCA); and Edge and agreement corporations, overseas subsidiaries of U.S. banks, and U.S. nonbank subsidiaries of foreign banking organizations (CAMEO).

3. For example, a significant change in financial condition may be evident from some combination of reports of examination conducted by other agencies, meetings or other communication with management of the institution, published financial reports or press releases, status reports submitted by the institution as required by an enforcement action, and information generated by ongoing surveillance activities.

4. Pursuant to the guidelines set forth in SR-97-27, the assignment of a separate risk-management rating is not required for small shell bank holding companies.

The Federal Reserve System BHC surveillance program (the program) defined in SR-95-43, "Revised Bank Holding Company Surveillance Procedures," covers companies with consolidated assets of $1 billion or more. Under the program, bank holding company financial data are monitored by computer-generated screens on an ongoing basis. Information generated through the surveillance process is to be used to monitor the financial condition of BHCs between inspections, assist in setting inspection schedules, and allocate supervisory or inspection resources toward institutions with declining financial conditions. The surveillance program for BHCs with total consolidated assets of less than $1 billion is discussed in section 4080.1 and in SR-02-01.

The program consists of three components: The first phase consists of computer screening of BHC financial data, which involves generating and reviewing an exception list of organizations meeting the exception criteria. (These BHCs are referred to as having "failed the screen.") During the second phase, an analysis is prepared that discusses the factors or reasons why the BHCs appeared on the exception list. The analysis is based on data summarized in the BHC Performance Report (BHCPR), the off-site weighted SEER (System to Estimate Examination Ratings) rating and the on-site CAMELS rating for subsidiary banks, and supplemental investment and other screens, as well as on other relevant financial data. The third phase focuses on developing a suitable supervisory response, corrective action, and follow-up by System staff to address problems first identified through the surveillance process.

The *computer screen*, generated at the Board, identifies BHCs that have $1 billion or more in consolidated assets and that may have financial weaknesses or deficiencies. The *analytical* effort of Reserve Bank analysts and examiners is designed to spot trends and changes in financial condition and to determine if companies identified by the screening effort require further in-depth review. The System *corrective action and follow-up* ensures that identified problems are monitored until they can be corrected or resolved.

The BHC surveillance program is designed to meet the following objectives:

1. To monitor BHC performance using the BHCPR.
2. To incorporate SEER and CAMELS ratings for subsidiary banks into an off-site monitoring program. The SEER rating model identifies, based on the most recent call report data, banks that exhibit financial characteristics of banks in lower-rated categories.[1] Because the condition of a consolidated holding company is typically highly correlated with the condition of its bank subsidiaries, the BHC surveillance program uses the off-site SEER ratings and on-site CAMELS ratings of bank subsidiaries in identifying deteriorating holding companies.
3. To achieve a BHC program that is sensitive to changes in the condition of the banking industry. The financial criteria, as discussed below, identify outliers based on either a poor relative percentile ranking or absolute levels of key financial ratios that meet minimum benchmarks.
4. To incorporate supplemental screens into the BHC surveillance process. A supplemental investment-activities screen identifies holding companies with high levels of unrealized securities depreciation relative to tier 1 capital. Additional supplemental criteria may include BHCs identified through growth and parent company screens.
5. To enhance and maintain quarterly communication with Reserve Bank surveillance staff. The Board's Surveillance Section sends a quarterly memorandum to all Reserve Banks to inform them of the most recent quarter's surveillance results. A corresponding Reserve Bank quarterly letter to the Board provides Reserve Bank staff with an opportunity to report on BHCs not identified in the Board screening process, but whose condition has deteriorated significantly since the last inspection.

4080.0.1 EXCEPTION LIST

BHC surveillance is conducted quarterly for banking organizations for the reporting periods ending on the last days of March, June, Septem-

1. The SEER methodology is described in detail in "FIMS: A New Monitoring System for Banking Institutions," January 1995 *Federal Reserve Bulletin* 1–15. The acronym FIMS was substituted in the article for the acronym SEER. However, both acronyms describe the same system.

ber, and December. Board staff initiate the surveillance process by subjecting all BHCs to the screens. BHCs that fail the screens and are top-tier holding companies that (1) have consolidated assets of $1 billion or more; (2) have a composite BOPEC rating of 1, 2, or 3; (3) have not been designated as an ''atypical'' BHC by the responsible Reserve Bank; and (4) are not part of the top 50 population are placed on the exception list.

The Board sends quarterly BHC exception lists to the surveillance staff at each Reserve Bank following the finalization of FR Y-9 data. Reserve Banks review the condition of the BHC, prepare a written analysis addressing factors that caused the BHC to be placed on the exception list, and submit written analyses of the BHCs on the list to the Board. The deadline for submission of written analyses is extended if the Reserve Bank determines that an on-site presence is warranted to satisfy the requirements of the written analysis.

Three surveillance screens are used to identify BHC exceptions as outlined below:

1. *Rating screen*. The rating screen provides a comparison between the bank (B) component in a BHC's BOPEC rating and the asset-weighted CAMELS and SEER ratings for the company's bank subsidiaries. It includes companies meeting the criteria below:

Bank (B) component BOPEC rating	*Weighted CAMELS rating*	*or Weighted SEER rating*
1	3 +	3 +
2	3 +	3 +
3	4 +	4 +

2. *Financial screen*. The financial screen uses three consolidated ratios from the BHCPR and identifies exceptions as bank holding companies meet the cut-off criteria for at least *two* of these ratios. A company can qualify as an exception if it (1) meets the minimum *relative* criteria for two of the ratios, which indicates a BHC with a poor percentile ranking relative to its BHCPR peer group, or (2) meets the *absolute* criteria for two of the ratios. The latter indicates a BHC with a low level of earnings or capital or with a high level of nonperforming assets. Specific ratios are presented in the table on the following page.
3. *Investment-activities screen*. The investment-activities screen identifies BHCs whose ratio of total unrealized securities depreciation (after tax) to tier 1 capital is −15 percent or worse *and* whose leverage ratio, adjusted for total securities depreciation, is less than 5 percent.

A written analysis is prepared for investment-activities exceptions when one or both of the following conditions apply: (1) the organization manages the investment process on a consolidated or global basis (that is, the parent company or lead bank formulates and possibly implements the investment strategy for the parent company and bank subsidiaries) or (2) the majority of the organization's bank subsidiary assets consist of state member bank assets.

If the written-analysis conditions do not apply, Reserve Banks are requested to provide a brief summary of the primary regulator's findings and actions concerning the bank subsidiaries' investment activities. This summary is to ensure that the primary regulator is aware of potential concerns with subsidiary banks' investment activities, and it also ensures that the BHC is acting as a source of strength to these particular bank subsidiaries. In addition, a BHC investment-activities analysis does not have to be prepared if the Reserve Bank is in the process of preparing or has provided (in one of the previous two quarters) an investment-activities analysis for one of the bank holding company's state member bank subsidiaries.

4080.0.2 REVIEW OF BHC EXCEPTION LIST AND RESERVE BANK ANALYSIS

The exception list provides a record of BHCs that failed the screens and helps track Reserve Bank conclusions on the reasons why they failed the screens. In their review, Reserve Banks are specifically requested to prepare a written analysis for all BHCs on the exception list. This Reserve Bank analysis is to include the following sections:

CUT-OFF CRITERIA—BHCPR FINANCIAL-SCREEN RATIOS

	Last fourth-quarter return on average assets	*Tier 1 leverage ratio*	*Nonperforming and 90+ days past-due ratio*
Peer-ranking criteria	percentile of 5 or less	percentile of 5 or less	percentile of 95 or more
Ratio-level criteria	0.5% or less	5.0% or less	5.0% or more

1. *Heading*, including the BHC's name, location, total assets, BOPEC rating, and date of last inspection; lead bank's name, location, charter, total assets, CAMELS rating, and date of last examination; reason for appearance on the exception list; and Reserve Bank analyst's name. For investment-activities exceptions, also include the ratio of total securities depreciation to tier 1 capital and the leverage ratio adjusted for total securities depreciation.
2. *Background*, including a summary of prior surveillance results. For investment-activities exceptions, a brief summary of the investment process is included (that is, who formulates and approves the investment strategy and how it is implemented for the organization).
3. *Analysis* of the current period's surveillance results, highlighting key changes in the BHC's condition during the most recent quarter and since the most recent inspection. In particular, this analysis explicitly discusses whether the factors identified as being responsible for the company's appearance on the exception list present any cause for supervisory concern. Any areas where the current period's surveillance results are believed to be misleading or inaccurate are detailed in this section. Additional guidance regarding the analysis section is provided below:
   a. The analysis should note any acquisitions, mergers, or de novo activities responsible for the BHC's meeting the exception criteria.
   b. For BHCs that meet the criteria for the CAMELS rating exception, the analysis should explicitly discuss the factors underlying the CAMELS rating as presented in the examination findings.
   c. For BHCs that meet the criteria for the SEER rating exception, the analysis should explicitly discuss the factors responsible for the SEER results, as presented in SEER Schedule 1A for bank subsidiaries.
   d. For BHCs that meet the financial exception criteria, the analysis should explicitly discuss the ratios identified by the financial screen.
   e. For BHCs that require a written analysis of investment activities, the discussion should include—
      - the securities portfolio composition and maturity;
      - the investment strategy;
      - management's ability to understand and manage the risks inherent in the investment portfolio, including a discussion of risk limits (For example, are the limits appropriate and is the BHC in compliance with these limits?);
      - the ability and intent to hold securities with unrealized losses and any contingency plans if the ability to hold these securities is tested;
      - the susceptibility of the portfolio to further depreciation (quantify if possible);
      - hedging strategies, if any;
      - the liquidity position of the BHC, including a discussion of the structure of the funding base and concentration of funding sources; and
      - the overall impact of securities depreciation on the financial condition of the BHC.
   f. For BHCs that fail the investment-activities screen but do not meet the conditions requiring a written analysis of investment activities, a brief summary of the primary regulator's findings and actions concerning the bank subsidiaries' investment activities should be provided.

4. *Conclusion*, summarizing the BHC's condition and the key factors supporting the analysis.
5. *Corrective action*, detailing corrective action taken by the BHC or Reserve Bank staff, including supervisory follow-up actions resulting from the current period's surveillance results. If no further actions are to be taken or recommended, the reason for this decision is stated, as well as the date and scope of the next scheduled inspection.
6. *Sign-off* by an officer in charge of bank holding company supervision, an officer in charge of bank holding company surveillance, and, if there are any investment-activities exceptions, a capital-markets coordinator. The signatures need only appear once on the cover letter accompanying the individual BHC analyses.

4080.0.3 CORRECTIVE ACTION AND FOLLOW-UP

Corrective action associated with newly identified problems must be initiated by the Reserve Bank as soon as possible. Follow-up action may include correspondence or meetings with the banking organization's management or an on-site inspection or examination. Problem situations are closely monitored by System surveillance and supervision staff until they have been resolved.

4080.0.4 ATYPICAL BHCs

No written analysis is required for BHCs that are designated "atypical." Reserve Banks identify atypical BHCs annually. Atypical BHCs could include those whose parent equity in nonbank subsidiaries is one-third or more than their equity in bank subsidiaries, those that choose not to consolidate material nonbank subsidiaries, and those BHCs that are directly owned by banks. BHCs may also be considered atypical due to other characteristics determined at the Reserve Bank's discretion.

The atypical BHC list should (1) provide the name, location, and RSSD-ID of the company; (2) explain the reason why the BHC is considered atypical; and (3) indicate whether the company was included on the list during the prior year. BHCs coming off the prior year's atypical listing are similarly identified and discussed. Reserve Banks should monitor atypical BHCs quarterly and provide a written analysis for an atypical company when deemed appropriate.

4080.0.5 ROLE IN INSPECTION PROCESS

In setting inspection schedules, companies identified as having weak or declining financial conditions would generally not qualify for an extension of the inspection cycle as discussed in section 5000.0 of this manual. These companies, therefore, would be inspected more frequently than companies without deficiencies.

A pre-inspection analysis, using the latest BHCPR and other relevant data, should be performed to help the examiner focus the inspection on areas that may require supervisory attention. This analysis may uncover declining financial trends or may indicate financial positions recently taken by the BHC that could eventually lead to a problem situation.

The performance report covers consolidated and parent-only, current and historical financial information; ratios; and peer-group percentiles. This information can be used to analyze and spot trends with respect to parent or consolidated asset growth, earnings, capital, liquidity, cash flow and leverage, and reliance on subsidiary dividends. By reviewing performance reports, analysts and examiners can gain insights to weaknesses, as well as to their nature and severity. For example, parent leverage, cash-flow, and coverage ratios may indicate problems at the parent level, which could have implications for the bank's financial condition. Information on the parent's income from subsidiaries could indicate that nonbank subsidiaries of the holding company are experiencing financial difficulties. Financial information on the parent's dependence on bank and nonbank subsidiaries through dividends and management fees, for example, can give the examiner valuable insights on the effect the holding company may be having on the financial condition of the subsidiaries, particularly on the depository institutions. Analysis of profitability ratios, income and expense data, and loan-loss information can also be used to pinpoint areas for further review when the examiners arrive on-site.

Much of this analysis can be conducted before the on-site inspection, thus enabling the examiner to better allocate his or her time on-premises to those areas requiring on-site review. For example, initial evaluations of capital, earnings, liquidity, leverage, and cash flow can be accomplished using information from the performance reports before the examiner's arrival on-site. This early evaluation will allow the examiner to isolate areas requiring further on-site review and also to focus attention on other areas that require on-site inspection, such as asset quality, nonbank activities, management, supervisory report accuracy, and legal compliance.

Screening results should also be reviewed to determine which screens, or combination of screens, the BHC failed and by what margin. If a particular company has been identified as an exception, analyses conducted by Reserve Bank analysts should be reviewed, as well as information available from Board staff. Finally, follow-up material available from Reserve Bank and Board staff should be reviewed and, in some cases, consultation with surveillance staff may be appropriate. The goal of all these activities is to help the examiner identify areas to focus on during the inspection.

The surveillance program for bank holding companies having total consolidated assets of less than $1 billion is described below. (See SR-02-1.) The surveillance program is a primary tool for identifying potentially significant changes in the condition of these organizations between reviews and for targeting the work of any on-site reviews. Quarterly surveillance screens identify potential parent-company and nonbank issues that may adversely affect affiliated insured depository institutions. In particular, the screens address parent-company cash flow; intercompany transactions; parent-company leverage; and consolidated capital ratios, where applicable. The surveillance screens are periodically updated to reflect industry trends and issues as well as changes in regulatory reporting requirements.

Upon receipt and finalization of quarterly Y-9 data, Board surveillance staff provide each Reserve Bank with the results of the small bank holding company surveillance screens, which identify companies that fail key screening criteria. Reserve Bank staff are requested to evaluate this information and take action, as appropriate, within 45 days of receipt. In doing so, Reserve Bank staff determine whether the screen results reveal that the holding company or its affiliates could pose or exacerbate a material risk to an insured depository institution subsidiary. If the screen results reveal no basis for a significant concern, a short note documenting this conclusion is prepared and filed, and no further action may be needed. If it is determined that the screen results reveal the potential for material risk to an insured depository institution, Reserve Bank staff are requested to take appropriate follow-up action within 90 days, such as contacting the institution to obtain more information, requesting a corrective action plan from the institution, implementing heightened monitoring procedures, or scheduling an on-site review. In most cases, follow-up action can be completed off-site; documentation supporting the action taken in these cases should be commensurate with the level of concerns. Typically, a short memorandum posted in the National Examination Data (NED) system will suffice. If an on-site review is recommended, the review is to commence within 90 days of the Reserve Bank's being notified of the surveillance results, and the findings of the review are to be communicated to the company, Board staff, and appropriate state and federal regulatory authorities within 120 days of that notification.

In addition to the surveillance monitoring screens, Board staff will provide Reserve Banks with program support screens that provide additional information to assist in the supervision of small bank holding companies. One set of support screens identifies companies that are classified as noncomplex, but which exhibit characteristics of complex organizations. Reserve Banks are to evaluate any company meeting those screens to determine whether its designation as noncomplex should be changed and its supervision program modified accordingly. A second set of support screens monitors compliance of financial holding companies with the capital, managerial, and Community Reinvestment Act standards set forth in the Gramm-Leach-Bliley Act. Follow-up requirements for companies failing those screens are outlined in previous guidance. (See SR-00-11.)

Surveillance information is crucial to identifying potential issues between reviews and for ensuring that on-site work is risk-focused. Accordingly, Reserve Bank staff are to continue taking steps to ensure the accuracy of the regulatory reports that are the basis for the surveillance program. In particular, System staff are to follow up promptly on identified inaccuracies.

Apart from the consideration of the creditworthiness of individual borrowers, holding companies engaged in international activities are subject to elements of country risk. Country risk encompasses the entire spectrum of risks arising from the economic, social, and political environments of a foreign country, as well as the governmental policies structured to respond to these conditions. These factors may have potentially favorable or adverse consequences for foreigners' debt and equity investments in a particular country. The Federal Reserve, along with the Office of the Comptroller of the Currency and Federal Deposit Insurance Corporation, has issued enhanced supervisory guidance concerning the elements of an effective country-risk management process for banking organizations. (See SR-02-05.) Country risk is the risk that economic, social, or political conditions in a foreign country might adversely affect an organization's financial condition, primarily through impaired credit quality or transfer risk.[1]

Country risk can occur in many different forms, and the nature of specific risks can change over time. It is essential that a U.S. banking organization with significant direct or indirect international exposure have in place an effective country-risk management process that is commensurate with the volume and complexity of its international activities. More specifically, country risk focuses on a borrower's capacity to obtain the foreign exchange required to service his cross-currency debt. A borrower's debt-service capacity may also be affected by the risks of political and social upheaval, nationalization and expropriation, governmental repudiation of external indebtedness, exchange controls, and devaluation. Events such as these may materially affect the condition of investments and the profitability of lending activities overseas; examiners must alert management to those risks that may be difficult for the holding company and its subsidiaries to absorb.

Using uniform examination procedures and techniques for evaluating country-risk exposures for domestic banks, examiners segregate country-risk factors from the evaluation of other lending risks. The procedures emphasize diversification of exposure to individual countries as the primary method of moderating country risk in international portfolios. The approach generally consists of three parts:

1. measuring exposure in each country where a business relationship exists
2. analyzing exposure in relation to the bank's capital resources and the economic and financial conditions of each country in which the bank has outstanding credits
3. evaluating the risk-management system used by the bank in relation to the size and nature of its foreign lending activities

Examiners should evaluate the adequacy of the country-risk management process at internationally active bank holding companies. This risk-assessment process should include, at a minimum, effective oversight by the board of directors, adequate risk-management policies and procedures, an accurate country-exposure reporting system, an effective country-risk analysis process, a country-risk rating system, country-exposure limits, ongoing monitoring of country conditions, periodic stress testing of foreign exposures, and adequate internal controls and an audit function. A bank holding company's country-risk management process should give particular attention to any concentrations of country risk, first at the consolidated level and then within the parent company and nonbank subsidiaries, as well as to any concentrations reported by supervisors at the bank subsidiaries.

4090.0.1 COUNTRY RISKS AND FACTORS

Country or sovereign risk encompasses the entire spectrum of risks and factors that arise from the economic, social, and political environments of a foreign country that may have potential consequences for foreigners' debt and equity investments in that country. A detailed description of these factors is described below.

4090.0.1.1 Macroeconomic Factors

The first factor affecting country risk is the size and structure of a country's external debt in relation to its economy, more specifically—

1. Transfer risk is the possibility that an asset cannot be serviced in the country of payment because the obligor's country lacks the necessary foreign exchange or has put restraints on its availability. For more information, see the Guide to the Interagency Country Exposure Review Committee Process (SR-99-35).

1. the current level of short-term debt and the potential effect that a liquidity crisis would have on the ability of otherwise creditworthy borrowers in the country to continue servicing their obligations, and
2. to the extent the external debt is owed by the public sector, the ability of the government to generate sufficient revenues, from taxes and other sources, to service its obligations.

The condition and vulnerability of the country's current account is also an important consideration, including—

1. the level of international reserves, including forward market positions of the country's monetary authority (especially when the exchange rate is fixed);
2. the level of import coverage provided by the country's international reserves;
3. the importance of commodity exports as a source of revenue, the existence of any price-stabilization mechanisms, and the country's vulnerability to a downturn in either its export markets or the price of an exported commodity; and
4. the potential for sharp movements in exchange rates and the effect on the relative price of the country's imports and exports.

The role of foreign sources of capital in meeting the country's financing needs is another important consideration in the analysis of country risk, including—

1. the country's access to international financial markets and the potential effects of a loss of market liquidity;
2. the country's relationships with private-sector creditors, including the existence of loan commitments and the attitude among bankers toward further lending to borrowers in the country;
3. the country's current standing with multilateral and official creditors, including the ability of the country to qualify for and sustain an International Monetary Fund or other suitable economic adjustment program;
4. the trend in foreign investments and the country's ability to attract foreign investment in the future; and
5. the opportunities for privatization of government-owned entities.

Past experience has highlighted the importance of a number of other important macroeconomic considerations, including—

1. the degree to which the country's economy may be adversely affected through the contagion of problems in other countries;
2. the size and condition of the country's banking system, including the adequacy of the country's system for bank supervision and any potential burden of contingent liabilities that a weak banking system might place on the government;
3. the extent to which state-directed lending or other government intervention may have adversely affected the soundness of the country's banking system, or the structure and competitiveness of the favored industries or companies; and
4. for both in-country and cross-border exposures, the degree to which macroeconomic conditions and trends may have adversely affected the credit risk associated with counterparties in the country.

4090.0.1.2 Social, Political, and Legal Climate

The analysis of country risk should also consider the country's social, political, and legal climate, including—

1. the country's natural- and human-resource potential;
2. the willingness and ability of the government to recognize economic or budgetary problems and implement appropriate remedial action;
3. the degree to which political or regional factionalism or armed conflicts are adversely affecting the government of the country;
4. any trends toward government-imposed price, interest-rate, or exchange controls;
5. the degree to which the country's legal system can be relied on to fairly protect the interests of foreign creditors and investors;
6. the accounting standards in the country and the reliability and transparency of financial information;
7. the extent to which the country's laws and government policies protect parties in electronic transactions and promote the development of technology in a safe and sound manner;
8. the extent to which government policies promote the effective management of the bank holding company's exposures; and

9. the level of adherence to international legal and business-practice standards.

4090.0.1.3 Factors Specific to Banking Organizations

Finally, a bank holding company's analysis of country risk should consider factors relating to the nature of its actual (or approved) exposures in the country, including, for example—

1. the bank holding company's business strategy and its exposure-management plans for the country;
2. the mix of exposures and commitments, including the types of investments and borrowers, the distribution of maturities, the types and quality of collateral, the existence of guarantees, whether exposures are held for trading or investment, and any other distinguishing characteristics of the portfolio;
3. the economic outlook for any specifically targeted industries within the country;
4. the degree to which political or economic developments in a country are likely to affect the bank holding company's chosen lines of business in the country (for instance, the unemployment rate or changes in local bankruptcy laws may affect certain activities more than others);
5. for a bank holding company involved in capital markets, its susceptibility to changes in value based on market movements (As the market value of claims against a foreign counterparty rise, the counterparty may become less financially sound, thus increasing the risk of nonpayment (this is especially true for over-the-counter derivative instruments.));
6. the degree to which political or economic developments are likely to affect the credit risk of individual counterparties in the country (for example, foreign counterparties with healthy export markets or whose business is tied closely to supplying manufacturing entities in developed countries may have significantly less exposure to the local country's economic disruptions than do other counterparties in the country); and
7. the bank holding company's ability to effectively manage its exposures in a country through in-country or regional representation, or by some other arrangement that ensures the timely reporting of, and response to, any problems.

4090.0.2 RISK-MANAGEMENT PROCESS FOR COUNTRY RISK

Country risk has an overarching effect on a bank holding company's international activities and should explicitly be taken into account in the risk assessment of all exposures (including off-balance-sheet) to all public- and private-sector foreign-domiciled counterparties. The risk associated with even the strongest counterparties in a country will increase if, for example, political or macroeconomic conditions cause the exchange rate to depreciate and the cost of servicing external debt to rise. Country risk can occur in many different forms, and the nature of specific risks can change over time. A U.S. banking organization with significant direct or indirect international exposure should have in place an effective country-risk management process that is commensurate with the volume and complexity of its international activities. Examiners should be continually evaluating the adequacy of the country-risk management process at internationally active bank holding companies, and they should regularly update their assessments. A bank holding company's country-risk management process should give particular attention to any concentrations of country risk at the parent level or within its bank and nonbank subsdiaries.

Country risk is not necessarily limited to banking organizations with direct international exposures. Domestic counterparties with significant economic dependence on a foreign country or region (for example, through export dependence) can pose an indirect country risk to banking organizations that do not have direct international activity. While banking organizations are not required to incorporate indirect country risk into a formal country-risk management process, they should nevertheless take these country-risk factors into account, where appropriate, when assessing the creditworthiness of domestic counterparties. Examiners should ensure that the overall credit-risk management process takes into account indirect country risk where applicable in all Federal Reserve–supervised banking organizations.

To effectively control the risk associated with international activities, bank holding companies must have a risk-management process that focuses on the broadly defined concept of country risk. The elements of a sound country-risk management process are discussed in further detail below.

4090.0.2.1 Oversight by the Board of Directors

If country risk is to be managed properly, the board of directors must oversee the process effectively. The board is responsible for periodically reviewing and approving policies governing its international activities to ensure that they are consistent with the bank holding company's strategic plans and goals. The board is also responsible for reviewing and approving limits on country exposure and ensuring that management is effectively controlling the risk. When evaluating the adequacy of the bank holding company's capital and allowance for loan and lease losses (ALLL), the board should take into account the volume of foreign exposures and the ratings of the countries to which it is exposed.

4090.0.2.2 Policies and Procedures for Managing Country Risk

Bank management is responsible for implementing sound, well-defined policies and procedures for managing country risk that—

1. establish risk-tolerance limits;
2. delineate clear lines of responsibility and accountability for country-risk management decisions;
3. specify authorized activities, investments, and instruments; and
4. identify both desirable and undesirable types of business.

Management should also ensure that country-risk management policies, standards, and practices are clearly communicated to the affected offices and staff.

4090.0.2.3 Country-Exposure Reporting System

To effectively manage country risk, the bank holding company must have a reliable system for capturing and categorizing the volume and nature of foreign exposures. The reporting system should cover all aspects of the bank holding company's operations, whether conducted through paper transactions or electronically. An accurate country-exposure reporting system is also necessary to support the regulatory reporting of foreign exposures on the quarterly Country Exposure Report, FFIEC 009, and the supplemental Country Exposure Information Report, FFIEC 009a.

The board of directors should regularly receive reports on the level of foreign exposures. If the level of foreign exposures in a bank holding company is significant,[2] or if a country to which the bank holding company is exposed is considered to be high risk, exposures should be reported to the board at least quarterly. More frequent reporting is appropriate when a deterioration in foreign exposures would threaten the soundness of the bank holding company.

4090.0.2.4 Country-Risk Analysis Process

Although the nature of the country-risk analysis process and the level of resources devoted to it will vary, depending on the size and sophistication of the banking organization's international operations, a number of considerations are relevant to evaluating the process in all banking organizations:

1. Is there a quantitative and qualitative assessment of the risk associated with each country in which the banking organization is conducting or planning to conduct business?
2. Is a formal analysis of country risk conducted at least annually, and does the banking organization have an effective system for monitoring developments in the interim?
3. Does the analysis take into account all aspects of the broadly defined concept of country risk, as well as any unique risks associated with specific groups of counterparties the banking organization may have targeted in its business strategy?
4. Is the analysis adequately documented, and are conclusions concerning the level of risk communicated in a way that provides decision makers with a reasonable basis for determining the nature and level of the banking organization's exposures in a country?
5. Given the size and sophistication of the banking organization's international activities, are the resources devoted to the analysis of country risk adequate?

2. For purposes of this guidance, concentrations of exposures to individual countries that exceed 25 percent of the bank holding company's or bank's tier 1 capital plus the ALLL are considered significant. However, in the case of particularly troubled countries, lesser degrees of exposure may also be considered to be significant.

6. As a final check of the process, are the banking organization's conclusions concerning a country reasonable in light of information available from other sources, including external research and rating services and the Interagency Country Exposure Review Committee (ICERC)?

4090.0.2.5 Country-Risk Ratings

Country-risk ratings summarize the conclusions of the country-risk analysis process. The ratings are an important component of country-risk management because they provide a framework for establishing country-exposure limits that reflect the bank holding company's tolerance for risk.

Because some counterparties may be more exposed to local country conditions than others, it is a common and acceptable practice for banking organizations to distinguish between different types of exposures when assigning their country-risk ratings. For example, trade-related and banking-sector exposures typically receive better risk ratings than other categories of exposure because the importance of these types of transactions to a country's economy has usually moved governments to give them preferential treatment for repayment.

The risk-rating systems of some banking organizations differentiate between public-sector and private-sector exposures. In some banking organizations, a country's private-sector credits cannot be rated less severely than its public-sector credits (that is, the banking organization imposes a "sovereign ceiling" on the rating for all exposures in a country). Both are acceptable practices.

A banking organization's country-risk ratings may differ from the ICERC-assigned transfer-risk ratings because the two ratings differ in purpose and scope. A banking organization's internally assigned ratings help it to decide whether to extend additional credit, as well as how it should manage existing exposures. Such ratings should, therefore, have a forward-looking and broad country-risk focus. The ICERC's more narrowly focused transfer-risk ratings are primarily a supervisory tool to identify countries where concentrations of transfer risk might warrant greater scrutiny and to determine whether some minimum level of reserves against transfer risk should be established. For more information on ICERC ratings, see section 7040.3 of the *Commercial Bank Examination Manual* and SR-99-35.

4090.0.2.6 Country-Exposure Limits

As part of their country-risk management process, internationally active bank holding companies should adopt a system of country-exposure limits. Because the limit-setting process often involves divergent interests within the banking organization (such as the country managers, the bank holding company's overall country-risk manager, and the country-risk committee), country-risk limits will usually reflect a balancing of several considerations, including—

1. the overall strategy guiding the bank holding company's international activities,
2. the country's risk rating and the bank holding company's appetite for risk,
3. perceived business opportunities in the country, and
4. the desire to support the international business needs of domestic customers.

Country-exposure limits should be approved by the board of directors, or a committee thereof, and communicated to all affected departments and staff. Exposure limits should be reviewed and approved at least annually—and more frequently when concerns about a particular country arise.

A bank holding company's board of directors and senior management should consider whether its international operations are such that it should supplement its aggregate exposure limits with more discrete controls. Such controls might take the form of limits on the different lines of business in the country, limits by type of counterparty, or limits by type or tenor of exposure. A bank holding company might also limit its exposure to local currencies. Bank holding companies that have both substantial capital-market exposures and credit-related exposures typically set separate aggregate exposure limits for each because exposures to the two lines of business are usually measured differently.

Although country-by-country exposure limits are customary, bank holding companiess should also consider limiting (or at least monitoring) exposures on a broader (for example, regional) basis. A troubled country's problems often affect its neighbors, and the adverse effects may also extend to geographically distant countries with close ties through trade or investment. By monitoring and controlling exposures on a regional basis, bank holding companies are in a better position to respond if the adverse effects of a country's problems begin to spread.

For bank holding companies that are engaged primarily in direct lending activities, monthly monitoring of compliance with country exposure limits is adequate. However, bank holding companies with more volatile portfolios, including those with significant trading accounts, should monitor compliance with approved limits more frequently. Exceptions to approved country-exposure limits should be reported to an appropriate level of management or the board of directors so that it can consider corrective measures.

4090.0.2.7 Monitoring Country Conditions

The bank holding company should have a system in place to monitor current conditions in each of the countries where it is significantly exposed. The level of resources devoted to monitoring conditions within a country should be proportionate to the bank holding company's level of exposure and the perceived level of risk. If the bank holding company maintains an in-country office, reports from the local staff are an obviously valuable resource for monitoring country conditions. In addition, periodic country visits by the regional or country manager are important to properly monitor individual exposures and conditions in a country. The bank holding company may also draw on information from rating agencies and other external sources.

Communication between senior management and the responsible country managers should be regular and ongoing. The bank holding company should not rely solely on informal lines of communication and ad hoc decision making in times of crisis. Established procedures should be in place for dealing with exposures in troubled countries, including contingency plans for reducing risk and, if necessary, exiting the country.

4090.0.2.8 Stress Testing

Bank holding companies should periodically stress-test their foreign exposures and report the results to the board of directors and senior management. As used here, stress testing does not necessarily refer to the use of sophisticated financial modeling tools, but rather to the need for all bank holding companies to evaluate in some way the potential impact different scenarios may have on their country-risk profiles. The level of resources devoted to this effort should be commensurate with the significance of foreign exposures in the bank holding company's overall operations.

4090.0.2.9 Internal Controls and Audit

Bank holding companies should ensure that their country-risk management process includes adequate internal controls and that an audit mechanism ensures the integrity of the information used by senior management and the board to monitor compliance with country-risk policies and exposure limits. The system of internal controls should, for example, ensure that the responsibilities of marketing and lending personnel are properly segregated from the responsibilities of personnel who analyze country risk, rate country risk, and set country limits.

4090.0.3 REPORTING REQUIREMENTS

4090.0.3.1 Country Exposure Report (FFIEC 009)

Banks and bank holding companies that own banks are required to file the Country Exposure Report (Form FFIEC 009, formerly Form FR 2036) when the bank or banks have a foreign branch, a foreign subsidiary, or an Edge corporation, and when they have, on a consolidated basis, total outstanding claims on residents of foreign countries of $30 million or more. The report is to be filed quarterly within 45 days of the end of March, June, September, and December.

The report measures lending to residents of foreign countries by U.S. banking organizations. It is used to provide information on the distribution, by country, of foreign claims held by such banking organizations to (1) determine the degree of risk in bank portfolios and how adverse developments in particular countries affect the U.S. banking system; (2) assess country risk for supervisory purposes, and (3) assist the Bank for International Settlements in compiling worldwide data on cross-border claims. The report also includes information on revaluation gains for off-balance-sheet items and for securities held in trading accounts.

4090.0.3.2 Country Exposure Information Report (FFIEC 009a)

The County Exposure Information Report (Form FFIEC 009a) supplements the Country Exposure Report. The purpose of FFIEC 009a is to provide public disclosure of significant country exposures of U.S. banking institutions. Every institution that submits the FFIEC 009 and that has exposures to a country that exceed 1 percent of total assets or 20 percent of capital of the reporting institution submits the FFIEC 009a. FFIEC 009a respondents also furnish a list of countries in which exposures were between ¾ of 1 percent and 1 percent of total assets or between 15 and 20 percent of capital. Filing of the report is required.

4090.0.3.3 Country Exposure Report for U.S. Branches and Agencies of Foreign Banks (FFIEC 019)

The Country Exposure Report for U.S. Branches and Agencies of Foreign Banks (Form FFIEC 019) is similar to the FFIEC 009 report that is filed by U.S. banks. The FFIEC 019 report collects information, by country, on the direct claims, indirect claims, and total adjusted claims on foreign residents; information on direct claims on related non–U.S. offices domiciled in countries other than the home country of the parent bank that are ultimately guaranteed in the home country that are included in total adjusted claims on the home country; and a breakdown of adjusted claims on unrelated foreign residents. The data are used by the supervisory agencies to monitor significant foreign-country exposures of U.S. branches and agencies of foreign banks. The reports are also used to evaluate the financial condition of these branches and agencies.

The FFIEC 019 is collected quarterly from those branches and agencies of foreign banks that have, as of the quarterly report date, more than $30 million in total direct claims on residents of foreign countries. The FFIEC 019 provides data on the foreign-risk exposure of each reporting branch and agency.

Respondents to the FFIEC 019 must prepare the data as of the close of each calendar quarter and submit the forms to the appropriate Reserve Bank no later than 45 days following the report date. Data are due at the Board 60 days following the report date. Bank holding companies should obtain, from the management of their respective foreign bank subsidiaries, written confirmation that the FFIEC 019 and all other Federal Reseserve and FFIEC reports have been filed, as required.

4090.0.4 INSPECTION OBJECTIVES

1. If the bank holding company is internationally active, to determine the nature and extent of its direct and indirect country-risk exposures.
2. If the bank holding company has significant direct or indirect international exposure, to evaluate and determine whether it has in place an effective country-risk management process that is commensurate with the volume and complexity of its international activities.
3. To review and determine if the bank holding company's system of policies, procedures, internal controls, rating system, and stress testing for county-risk management are adequate and reliable.
4. To determine if the bank holding company's board of directors oversees and regularly reviews its country-risk management process, approves limits on country exposure, provides for adequate capital that is commensurate with its direct and indirect country-risk exposures, and ensures that management is effectively controlling the risk.
5. To determine if management clearly communicates the bank holding company's country-risk management policies, standards, and practices to the affected offices and staff.
6. To (1) determine if the scope of the bank holding company's audit function is adequate and if the function is sufficiently comprehensive to ensure the integrity of the information senior management and the board use to monitor the bank holding company's country-risk management process, and (2) ensure that the board of directors or its audit committee has provided for adequate audit coverage of country-risk management functions.
7. To recommend corrective action if a bank holding company's country-risk management process and controls are deficient in relation to the level of country-risk exposure.
8. To determine if the bank holding company is properly preparing the Country Exposure Report, FFIEC 009, and the supplemental

Country Exposure Information Report, FFIEC 009a, both of which are required to be filed quarterly with the respective Reserve Banks, as applicable.
9. To identify and report individual exposures considered significant in relation to the bank holding company's capital and the economic performance of the country.
10. To prepare a report on the bank holding company's country-exposure management system and on any noted deficiencies.

4090.0.5 INSPECTION PROCEDURES

When performing and updating the bank holding company's risk assessment, the central point of contact for the bank holding company should include an analysis of its direct and indirect country-risk exposures (including any significant country-risk concentrations) and of the adequacy and reliability of its country-risk management. The analysis of the bank holding company's country-risk management systems should consist of three important components.

One component is the provision for evaluation of economic trends, political developments, and the social fabric within countries where the bank holding company's funds are at risk. These so-called country studies are derived from economic data supplied by the borrower or published by institutional lenders; sociopolitical commentaries; on-site reports from bank branches, subsidiaries, or affiliates; or bank-officer visits to the country.

In the second component, the board of directors and senior management define the level of country exposure the bank is willing to assume. This undertaking normally includes the establishment of limits on aggregate outstandings, maturities, and categories of risk exposures by country, which serve as a guide to operating management in the development and servicing of the bank holding company's international credit portfolio.

The third component is the bank holding company's internal reporting system, which should be designed to monitor and control country exposure. A comprehensive reporting system is required to accurately assign risk exposures to the country of risk, ensure adherence to the directives of the board of directors, provide for at least an annual review of portfolio composition in individual countries, and establish a clear-cut methodology for reporting exceptions to established limits.

A summary of the country-risk management system should be prepared. Set forth below are guidelines and procedures for examiners to use in evaluating the systems banks use to monitor and control country-risk elements in their international loan portfolios. In assessing the quality of the country-risk management system, examiners should, as a matter of course, spot-check the accuray of the data submitted on the Country Exposure Report, FFIEC 009, and the supplemental Country Exposure Information Report, FFIEC 009a, as applicable. The review should include a review of the exposures for at least several countries. The report page, Examiners' Comments and Matters Requiring Special Board Attention, should be used to comment on material exceptions.

1. Obtain any written policies, procedures, or summaries of the bank holding company's country-risk management system. Determine whether the bank holding company's country-risk management system includes—
   a. effective oversight by the board of directors,
   b. adequate risk-management policies and procedures,
   c. an accurate country-exposure reporting system,
   d. an effective country-risk analysis process,
   e. a country-risk rating system,
   f. country-exposure limits,
   g. ongoing monitoring of country conditions,
   h. periodic stress testing of foreign exposures, and
   i. adequate internal controls and an audit function. (See SR-02-05.)
2. Review international-lending policies and determine—
   a. if the board of directors regularly reviews and gives final approval to the limits on country exposure at least annually (or quarterly, if the foreign exposures are high risk or the concentrations are significant);
   b. who initiates the country ratings and country limits;
   c. how frequently and by whom country ratings and limits are reviewed and changed;
   d. how the bank holding company defines the ratings assigned to the various countries;
   e. how country limits are determined;
   f. who is responsible for monitoring compliance with country limits;
   g. if country-risk limits consider—
      (1) the overall strategy guiding the insti-

tution's international activities,
(2) the country's risk rating and the institution's appetite for risk,
(3) perceived business opportunities in the country, and
(4) the desire to support the international business needs of domestic customers;

h. to what extent country limits are viewed as guidelines that may be exceeded;
i. if the bank holding company has different sublimits for private- and public-sector credits;
j. if separate limits are established for private- and public-sector credits;
k. if the board of directors or a committee thereof periodically reviews country ratings and limits, and evaluates the bank holding company's performance against those standards;
l. to what extent comments or classifications of bank supervisors are considered in establishing, increasing, or decreasing country limits;
m. how the system has been changed since the last examination;
n. if the bank holding company has a reliable system for capturing and categorizing the volume and nature of foreign exposures;
o. whether the bank holding company has a system to monitor current conditions in each of the countries where it is significantly exposed;
p. if there is regular, ongoing communication between senior management and the responsible country managers;
q. if established procedures are in place for dealing with exposures in troubled countries, including contingency plans for reducing risk and, if necessary, exiting the country; and
r. whether the bank holding company periodically conducts stress tests (financial modeling or measuring the impact of various scenarios on its country-risk profiles) of its foreign exposures, and if the results are reported to senior management and the board of directors.

3. Review reports furnished to the board or the appropriate committee to ensure that comprehensive and accurate information is being submitted on a timely basis.
4. Obtain the bank holding company's report on the general distribution and characteristics of the international loan portfolio and compare loan-category distributions for adherence to guidelines.
5. During a discussion with senior management, direct inquiries to—
   a. gain insight into general management's international-lending philosophy, and
   b. elicit management responses for correction of deficiencies.
6. When reporting on the bank holding company's country-risk management system, consider factors such as—
   a. the quality of internal policies, practices, procedures, and controls over the international-lending functions;
   b. the scope and adequacy of the internal loan- review system as it pertains to country risk;
   c. causes of existing problems;
   d. commitments from management for correction of deficiencies;
   e. expectations for continued sound international lending or correction of existing deficiencies;
   f. the ability of management to monitor and control transfer risk;
   g. the general level of adherence to internal policies, practices, procedures, and controls; and
   h. the scope and adequacy of the bank holding company's analysis of country conditions.

5000.0.1 INSPECTION REPORTING PROGRAM

The BHC inspection report is intended to effectively communicate the result of inspections without compromising the integrity of inspection and reporting procedures. The inspection report serves the needs of several distinct audiences: the BHC (its directors, executive management, and line management), the Federal Reserve Board, the Federal Reserve Bank, and other banking organization regulators (state banking agencies, the OCC, and the FDIC). The inspection report should serve as an effective and efficient vehicle for communicating conclusions, concerns, and recommendations to the principal audience—the BHC's board of directors—without sacrificing to any great extent the needs of the other users. The inspection reporting program operates on the condition that inspection workpapers can be obtained for immediate review by Federal Reserve Bank or Federal Reserve Board staff, when requested.

The presentation within the inspection report is intended to be concise and direct, with the information needed by all audiences found in the core section. The core section contains the report pages, which consist of the "Examiner's Comments and Other Matters Requiring Special Board Attention," "Scope," "Structure and Abbreviations," and "Analysis of Financial Factors," as well as an analysis of asset quality and off-balance-sheet risk and certain other required financial statements and schedules. Supporting schedules are required and added to the core section when an area of concern or a problem is addressed in the report.

One standardized BHC inspection report format, FR 1225, has been designed to meet the desired objectives of the full-scope report for all organizations, regardless of the structure and complexity of the BHC under inspection. A few report pages, designated FR 1241, are to be used for BHCs that have less than $150 million in assets. These pages are "Parent Company and Nonbank Assets Subject to Classification," "Bank Subsidiary," "Capital Structure," and "Other Supervisory Issues." The latter two report pages are for the lead bank or other comparable bank subsidiary.

This part of the manual presents policy and procedures for the inspection process, the collection and presentation of data, and the preparation of the resulting analyses in the inspection report. Section 5010.0 corresponds directly to each page for the report (FR 1225). Sections 5020.0 and 5030.0 provide instructions for limited and targeted inspections.

In each report page, instructions are generally organized to state what information is to be presented on a page, the objectives for the information to be presented, the potential source of the information, and how the information is to be presented in the report. Also, the instructions mention other report areas that are affected by material reported on the page.

The examiner is reminded that the instructions in sections 5010, 5020, and 5030 are only a starting point. As such, the instructions focus principally on the collection of information and the presentation in the report of inspection findings. When working on specific functional aspects of the inspection, the examiner should also refer to the appropriate subject heading in this manual.

5000.0.2 POLICY FOR FREQUENCY AND SCOPE OF INSPECTIONS FOR BHCs

On October 7, 1985, the Board announced its policy, effective January 1, 1986, to increase the frequency of inspections of BHCs.[1] The policy objectives are to (1) help prevent the development of problems at banking institutions and (2) make more effective the Federal Reserve's ability to identify and resolve problems that develop nonetheless.

In general, the policy provides that—

1. the largest and most complex BHCs will be inspected at least annually;
2. the largest BHCs, and those with significant problems, will be inspected semiannually; and
3. as an exception to the general rule, small holding companies with no known problems will be reviewed on a more limited basis.

(See section 5000.0.3 for the parameters of the policy statement.)

Federal Reserve Banks are to intensify their involvement in the inspection of large organizations and those with significant problems. Greater

1. All financial holding companies are BHCs; hence, the supervisory guidance in this section applies to financial holding companies as well as BHCs.

reliance is to be placed on state examinations or inspections, in the case of smaller organizations. If a state lacks the resources to conduct inspections in accordance with the specifications of the policy or is unwilling to do so, or, in the case of holding companies, lacks authority, the Federal Reserve will conduct the examinations or inspections to the extent needed to meet the specifications. In addition, if a BHC or its state member bank subsidiary indicates its wish to be examined or inspected by its Federal Reserve Bank, that wish should be honored.

5000.0.3 FREQUENCY AND SCOPE OF INSPECTIONS OF THE LARGEST BHCs

Rating	*Asset Size*		
	$10 billion and over	*$5 billion to $10 billion*	
		Complex[4]	*Noncomplex*[5]
1 or 2	Full-scope required annually.[1] Additional limited-scope or targeted presumed annually.	Full-scope required annually. Limited-scope[2] or targeted[3] when needed.	Limited-scope required every two years. Additional limited-scope or targeted when needed.
3	Full-scope required annually. One limited-scope or targeted also required annually.		
4 or 5	Full-scope required annually. One limited-scope or targeted also required annually.		

Source: Board policy statement, October 7, 1985.

Special Characteristics:

1. BHCs formed to acquire going concerns: inspection to be conducted between the 6th and 18th months of operation, or within 36 months under specific condition, or waived if under $50 mm with specific conditions.
2. Change in control or de novo BHCs: inspection required within 12 months.
3. BHCs that fail surveillance screen or for which other significant adverse information is received: triggers in-depth off-site review to evaluate need for limited-scope or targeted inspection.

Notes:

1. A *full-scope inspection* covers all areas of interest to the Federal Reserve in depth.
2. A *limited-scope* inspection will review all areas of activity covered by a full-scope inspection, but less intensively.
3. *Targeted inspections* will focus intensively on one or two activities.
4. A complex BHC is defined as one with material credit-extending nonbank subsidiaries or debt outstanding to the general public.
5. A noncomplex BHC is without credit-extending subsidiaries and without public debt.

5000.0.4 INSPECTION-FREQUENCY REQUIREMENTS

5000.0.4.1 BHCs with No Identified Problems or Special Characteristics

Multinational bank holding companies and all others with consolidated assets over $10 billion are to receive a full-scope inspection annually, to be coordinated with the examination of the lead bank to the extent possible. Although the inspection of the holding company and the examination of the lead bank need not be commenced simultaneously, they should overlap and rely on financial statements as of the same date, if possible, to facilitate the analysis and presentation of findings to management and directors. A limited-scope or targeted inspection of these companies is also to be conducted between the annual full-scope inspections; the precise timing will be determined by off-site surveillance reports and opportunities to coordinate with the examination of the lead bank. The requirement for a limited-scope or targeted inspection may be waived by the Reserve Bank if, on the basis of the findings of the last full-scope inspection and of the surveillance system, the institution is judged to be in satisfactory condition.

Complex BHCs (defined as companies with nonbank subsidiaries that extend a material amount of credit or companies whose parent has a material amount of debt outstanding to the general public[2]) with consolidated assets of $15 billion or more receive a full-scope inspection annually. These inspections should be conducted, to the extent possible, in coordination with the examination of the lead bank. All BHCs in this size group should be subject to additional limited-scope or targeted inspections when the Reserve Bank has information that suggests the institution may be developing significant problems.

5000.0.4.2 BHCs Requiring Special Supervisory Attention

The inspection frequency of BHCs requiring special supervisory attention is to be determined by both the size and complexity of the organization. The most intensive frequency requirements are directed at BHCs rated BOPEC composite 3, 4, or 5, or whose lead bank subsidiary has been rated CAMELS composite 3, 4, or 5. All BHCs so rated and with consolidated assets of $5 billion or more are to receive an annual full-scope inspection and a limited-scope or targeted inspection during the interval between full-scope inspections.

5000.0.4.3 Supervision Procedures for BHCs with Total Consolidated Assets of Less Than $5 Billion

5000.0.4.3.1 Holding Companies with Total Consolidated Assets Between $1 Billion and $5 Billion

In accordance with SR-02-1, a full-scope inspection for holding companies with total consolidated assets between $1 billion and $5 billion may be satisfied, when appropriate, with a targeted or limited-scope on-site review supplemented by other information sources. A full-scope inspection (which may include a targeted review for the on-site portion) is to be conducted for the *complex holding companies* at least once annually, after which a complete rating is assigned.[3] For the *noncomplex holding companies,* an inspection (which may be targeted or limited in scope) is required at least once every two years, after which a complete rating is assigned. For both complex and noncomplex companies in this size group that are rated composite 3, 4, or 5, one full-scope inspection—which under this program may include a targeted review for the on-site portion—plus one limited-scope inspection must be conducted at least annually. The inspection's scope and documentation requirements are governed by the guidance in this manual. The scope and documentation requirements are to be tailored to the risks—in particular, the risks posed to an insured depository institution subsidiary by the holding company's operations or activities—and to the company's compliance with applicable laws and regulations.

5000.0.4.3.2 Holding Companies with Total Consolidated Assets of Less Than $1 Billion

For *complex holding companies,* Reserve Banks can conduct an off-site review of the organization using surveillance results and relevant supervisory, financial, and other information, including correspondence or other communications with bank management and the primary bank supervisor or functional or other regulator. The supervisory cycle will be determined by the examination frequency of the lead depository institution.[4] Surveillance results or other relevant financial and supervisory information may prompt more frequent reviews and reassignment or confirmation of ratings. If the information obtained off-site from these sources is not sufficient for the Reserve Bank to determine the overall condition of the company and to assign a complete holding company rating, an on-site review should be conducted. The on-site review should be targeted, as appropriate, to those areas where additional information or analysis is needed to develop the complete holding company rating.

2. SR-02-1 extended the definition of a complex BHC to take into account a number of considerations: the size and structure of the holding company; the extent of intercompany transactions between insured depository institution subsidiaries and the holding company or uninsured subsidiaries of the holding company; the nature and scale of any nonbank activities, including whether the activities are subject to review by another regulator and the extent to which the holding company is conducting Gramm-Leach-Bliley authorized activities (for example, insurance, securities, merchant banking); and whether risk-management processes for the holding company are consolidated. Such a determination is made at least annually on a case-by-case basis.

3. The complete holding company rating would include a composite rating as well as all of the component ratings.

4. The lead depository institution is generally the largest depository institution subsidiary. However, a Reserve Bank may, based on the facts and circumstances of a particular holding company, designate another depository institution as the lead.

For the *noncomplex holding companies,* where all subsidiary depository institutions have satisfactory composite and management ratings, and where no material outstanding holding company or consolidated issues are otherwise indicated, the Reserve Bank assigns only a composite rating and a management rating to the company based on the ratings of the lead depository institution. Also, for those noncomplex holding companies that have a subsidiary depository institution in less than satisfactory condition, or with a less than satisfactory management rating, or where a material supervisory issue is otherwise indicated, the Reserve Bank is to conduct an off-site review of the organization using surveillance results and relevant financial, supervisory, and other information, including correspondence or other communications with bank management and the primary bank supervisor. If the information obtained off-site from these sources is not sufficient to determine the overall financial condition of the holding company and to assign the composite and management ratings, an on-site review should be conducted. Any on-site review should be targeted, as appropriate, to those areas where additional information is needed to develop the management and composite ratings.

5000.0.4.4 BHCs with Special Characteristics

BHCs formed to acquire an existing bank are to be inspected to determine their compliance with Federal Reserve regulations and the extent to which they have fulfilled commitments the Board of Governors required of the organization in approving its application. Such inspections should be conducted between the 6th and 18th month after the acquisition; their scope is to be determined by the Reserve Bank. If information available to the Reserve Bank (the most recent examination of the bank, the most recent FR Y-6 and FR Y-9 reports from the holding company, and other pertinent information) indicates that (1) the condition of the bank and BHC is satisfactory, (2) the BHC is fulfilling its commitments to the Board of Governors, and (3) the ratio of the parent's debt to its proportionate interest in the book value of the subsidiary bank (or banks) is less than 75 percent, then, at the Reserve Bank's discretion, the inspection may be delayed as long as 36 months after the formation. Moreover, the requirement for an inspection may be waived in the case of a BHC whose bank subsidiary has less than $50 million in total assets if, in the Reserve Bank's judgment, (1) the holding company's financial condition is satisfactory and its commitments to the Board of Governors are being fulfilled and (2) the ratio of the holding company's debt to its proportionate interest in the book value of the subsidiary bank (or banks) is less than 75 percent.

BHCs that have undergone a change in control and de novo BHCs organized to acquire de novo banks are to receive a full-scope inspection within 12 months following the change in control or formation. A limited-scope or targeted inspection may be conducted in lieu of the full-scope inspection if, in the Reserve Bank's judgment, the financial condition of the holding company appears satisfactory.

When BHCs fail the surveillance screen or when other information suggests the company has experienced an adverse development, an in-depth, off-site review will be made to determine the need for a limited-scope or targeted inspection.

5000.0.4.5 Inspection of Nonbank Subsidiaries of BHCs

The instructions in this subsection are intended to supplement the guidance in the Board's policy statement regarding the frequency and scope of inspections for BHCs, as set forth above and included with SR-85-28 (October 7, 1985). (See sections 4030.0.2, 5010.6.3, and 5010.31; SR-93-19 (April 13, 1993); and the *Federal Reserve Regulatory Service* at 3–1531.)

5000.0.4.5.1 On-Site Reviews of Nonbank Subsidiaries

Notwithstanding the risk assessment that is to be performed for each nonbank subsidiary (see section 4030.2), an on-site review is required for the following nonbank subsidiaries:[5]

1. *Any individual subsidiary that meets either of the following two significance criteria or that is otherwise deemed by the Reserve Bank to have a significant impact on the BHC's condition or performance:*[6]
   - The subsidiary has total assets equal to

5. The on-site review for these nonbank subsidiaries should be performed with the same frequency as required for a full-scope inspection but may be performed as a targeted review that is not concurrent with the full-scope inspection.

6. Generally, examiners would not be required to conduct

10 percent or more of the bank holding company's consolidated tier 1 capital.
- The subsidiary's total operating revenue equals 10 percent or more of the BHC's consolidated total operating revenue.[7]

2. *Nonbank subsidiaries that are issuing debt to unaffiliated parties or relying to a significant degree on affiliated banks for funding.* ''Significant'' is defined as debt that exceeds the lesser of $10 million or 5 percent of the BHC's consolidated tier 1 capital.
3. *Those mortgage banking subsidiaries and other nonbank subsidiaries involved in asset securitization and all nonbank subsidiaries that generate assets and sell them to affiliated parties.* Examiners involved in the on-site review of these subsidiaries should consider the appropriate examination guidelines for asset securitization, for example, those set forth in SR-90-16 (May 25, 1990) and in SR-91-2 (January 31, 1991), dealing with collateralized mortgage obligations (CMOs) and real estate mortgage investment conduits (REMICs). (See section 2128.02.)
4. *All nonbank subsidiaries that broker or deal in derivative instruments, as a principal or agent, to unaffiliated parties.*

Furthermore, for each credit-extending nonbank subsidiary that meets the above on-site review criteria, examiners are to review sufficient credit files through either judgmental or attribute sampling to assess the adequacy and accuracy of internal risk-identification systems.

5000.0.4.5.2 Off-Site Review of Nonbank Activities

Reserve Banks should review reports submitted to the Federal Reserve to monitor the condition and performance of significant nonbank subsidiaries between inspections. FR Y-series reports on individual and combined nonbank subsidiaries should be used for this purpose and, when available, financial statements on nonbank activities that are included with the FR Y-6 annual reports of BHCs should also be reviewed.[8] When warranted by (1) a deterioration in the condition and performance of nonbank subsidiaries, (2) the significance of the nonbank subsidiaries (including those selected for on-site review as discussed above), or (3) other reasons, Reserve Banks should require BHCs to submit additional information (for example, balance sheets, income statements, and schedules on nonperforming assets and off-balance-sheet activities) obtained from a company's internal systems. Furthermore, on an exception basis, Reserve Banks will be expected to obtain from a BHC's internal systems information on the off-balance-sheet exposures of nonbank subsidiaries and, when considered significant, monitor the risks posed by these exposures. If the Reserve Bank determines that a situation warrants material departure from these procedures, it should be discussed with Board staff.

5000.0.4.6 Rating Assignments for Complex and Noncomplex Holding Companies with Total Consolidated Assets of Less Than $1 Billion

The documentation for the ratings and the off-site or on-site review for both complex and noncomplex companies with total consolidated assets of less than $1 billion should be commensurate with the risk of the company and the nature and scope of issues. At a minimum, this documentation will generally consist of the examination reports for the insured depository institution subsidiaries, a copy of the transmittal letter communicating the ratings to the company, information related to relevant surveil-

an on-site review of those nonbank subsidiaries that hold premises that are necessary for the operation of the banks or other affiliates. Furthermore, these criteria are not intended to include nonbank subsidiaries that have been subject to recent on-site review by another federal or state banking agency in accordance with interagency agreements or Reserve Bank agreements with state banking supervisors (for example, the Interagency EDP Examination, Scheduling, and Distribution Policy). These criteria also should not limit Reserve Bank flexibility in coordinating supervisory efforts with functional regulators at the federal or state level.

7. For BHCs, ''total operating revenue'' is the sum of total interest income and total noninterest income (before extraordinary items).

8. For example, combined financial statements of nonbank subsidiaries are submitted to the Board quarterly on Form FR Y-11Q when the nonbank subsidiary is owned or controlled by a BHC with total consolidated assets equal to or greater than $150 million *and*—
1. the total assets of the nonbank subsidiary are equal to or greater than 5 percent of the top-tier BHC's consolidated tier 1 capital or
2. the total operating revenue of the nonbank subsidiary is equal to or greater than 5 percent of the top-tier BHC's consolidated total operating revenue.

Operating revenue is defined for this pupose as the sum of total interest income and total noninterest income (before deduction of expenses and extraordinary items).

Annual reports of selected financial data for individual nonbank subsidiaries are also submitted to the Board on Form FR Y-11I. Section 20 subsidiaries submit quarterly financial statements to the Board on the FR Y-20 report.

lance results, and memoranda supporting any on-site review conducted. All ratings assigned should be communicated to the company, Board staff, and appropriate state and federal regulatory authorities as soon as possible, but generally no later than 90 days after receipt of the lead depository institution examination report. If an on-site review is required to assign the ratings, the findings of that review and the assigned ratings should be communicated no later than 120 days after receipt of the lead depository institution examination report. The ratings should be entered into the National Examination Data (NED) system.

5000.0.4.6.1 Rating Assignments for Complex Holding Companies with Total Consolidated Assets of Less Than $1 Billion

The Reserve Bank will assign a complete holding company rating, using surveillance results and relevant supervisory, financial, and other information, including correspondence or other communication with bank management and the primary bank supervisor or functional or other regulator.[9] If the information obtained off-site from these sources is not sufficient for the Reserve Bank to determine the overall condition of the company and assign a complete holding company rating, the information must be derived from an on-site review.

5000.0.4.6.2 Rating Assignments for Noncomplex Holding Companies with Total Consolidated Assets of Less Than $1 Billion

For noncomplex holding companies with total consolidated assets of less than $1 billion, where all subsidiary depository institutions have satisfactory composite and management ratings and no material outstanding holding company or consolidated issues are otherwise indicated, the Reserve Bank should assign only a composite rating and a management rating to the company on the basis of the ratings of the lead depository institution. For those holding companies in this asset group that have a subsidiary depository institution in less than satisfactory condition, or with a less than satisfactory management rating, or where a material supervisory issue is otherwise indicated, the Reserve Bank will conduct its off-site review of the organization using surveillance results and relevant financial, supervisory, and other information, including correspondence or other communications with bank management and the primary bank supervisor. Any on-site review should be targeted, as appropriate, to those areas where additional information is needed to develop the management and composite ratings.

9. The complete holding company rating would include a composite rating as well as all of the component ratings.

5000.0.4.6.3 Rating Assignments for Holding Companies with Total Consolidated Assets Between $1 Billion and $5 Billion

All companies with total consolidated assets between $1 billion and $5 billion (whether deemed complex or noncomplex) must be assigned a complete holding company rating. The complete holding company rating would include a composite rating as well as all of the component ratings. The ratings must be communicated to the holding company in writing within 60 days from the completion of the inspection; however, Reserve Banks are encouraged to adopt an internal target of 45 days for the processing and mailing of reports for companies rated 3, 4, or 5. (See SR-93-4.)

5000.0.5 BHCs EXEMPT FROM THE PROHIBITIONS OF SECTION 4 OF THE BHC ACT

BHCs exempt from the prohibitions of section 4 of the Bank Holding Company Act of 1956, as amended, as a result of any of the following exemptions will not be subject to any required periodic inspection:

1. section 4(a)(2)—permanent grandfather rights
2. section 4(c)(i)—labor, agricultural, or horticultural organization
3. section 4(c)(ii)—85 percent family-owned
4. section 4(c)(12)—irrevocable declaration to cease to be a BHC
5. section 4(d)—hardship exemption

However, the Reserve Bank should continue to monitor the financial condition of such holding companies and should conduct inspections whenever there is any indication of a potential problem in a subsidiary bank.

5000.0.6 OUT-OF-DISTRICT INSPECTIONS

In addressing the issue of Reserve Bank supervision of out-of-District facilities, the Board approved the policy that the Reserve Bank of the District where the parent holding company or lead bank is located would be responsible for the supervision, examination, inspection, and applications of all of that company's out-of-District facilities. The following administrative procedures and guidelines have been established.

The Reserve Bank responsible for the supervision of the parent holding company is also responsible for the supervision of all of its nonbank subsidiaries, regardless of location. Classification of assets of out-of-District nonbank subsidiaries should be performed at the office of the parent company by the responsible Reserve Bank when sufficient information is available or could be made available upon request. In adopting the inspection-frequency requirements for selected BHCs (see above), the Board recognized that inspection of nonbank subsidiaries and classification of nonbank assets were an essential part of the inspection process. However, an on-site inspection of out-of-District nonbank subsidiaries should not be done routinely by the responsible Reserve Bank. If the responsible Reserve Bank concludes that information necessary to classify assets is available only on-site, or if problems or other material circumstances lead to the conclusion that an on-site inspection is required, the local Reserve Bank should be asked to perform the inspection. Staff from the responsible Reserve Bank may participate when supervisory problems are serious enough to warrant the involvement of the responsible Reserve Bank.

5000.0.7 MULTI-TIER BHC INSPECTIONS

With the marked increase in interstate banking activity, a growing number of multi-tier BHC structures exist in which the top-tier and second-tier institutions (as well as other lower-level tiers) are in different Federal Reserve Districts. Consistent with the policy in SR-78-464 on the supervision of out-of-District nonbank subsidiaries, the general framework now in place will remain the primary guideline. The Reserve Bank responsible for the supervision of the top-tier BHC will also be responsible for the supervision of all of the subsidiary-tier BHCs and their nonbank operations, regardless of the District where they are located.

Given this overall policy direction, general guidelines are established for inter-District coordination for multi-tiered BHCs where the second-tier institution is located in a different District from that of the top-tier parent holding company. (See SR-89-25.)

5000.0.7.1 Population of Second-Tiers Suitable for On-Site Inspection

A second-tier holding company (and other lower tiers) that (1) has assets greater than $5 billion, (2) irrespective of size, has a financial condition deemed in need of special supervisory attention (BHC or lead bank rated 3, 4, or 5), or (3) is prone to insider or abusive practices would usually warrant an on-site inspection, the preparation of an inspection report, the assignment of a rating, and a presentation of findings to management, as well as the board of directors if the board includes any "outside directors." To the extent possible, the inspection should be coordinated with that of the top-tier parent holding company.

5000.0.7.2 Frequency Guidelines for Second-Tier BHCs over $5 Billion

It is assumed that a second-tier BHC will be subject to inspection-frequency guidelines that pertain to the top-tier on a consolidated basis. Although top-tier companies greater than $10 billion in assets may be subject to a second on-site presence annually, these guidelines are not intended to require a second annual presence for the second-tier company.

5000.0.7.3 Frequency Guidelines for Second-Tier BHCs Rated 3, 4, or 5

When a second-tier holding company requires special supervisory attention or is prone to insider or abusive practices, the responsible Reserve Bank may conclude that the second-tier holding company warrants inspection at least as frequently or more frequently than the top-tier holding company. Under such circumstances, it would be appropriate for the second-tier holding company to receive a second presence annually, despite the fact that the top-tier holding company may be inspected less frequently. Problem BHCs acquired as "debts previously contracted'' need not be inspected any more frequently than the top-tier company.

5000.0.7.4 Second-Tier Shell BHCs

To the extent that the second-tier holding company is strictly a shell without outside directors and no substantive policymaking authority, and to the extent that the records necessary to review its operations and condition are available at the location of the top-tier holding company, the inspection of the second-tier need not be done on-site, but may be done at the top-tier parent location. In either case, if an inspection is conducted, a rating should be assigned to the second-tier holding company. (See SR-89-25.)

5000.0.7.5 Staffing of Inspections of Out-of-District Second-Tier BHCs and Nonbank Subsidiaries

To the extent possible and consistent with the principles of efficiency and effectiveness, the responsible Reserve Bank should rely on the local Reserve Bank to provide the resources necessary to conduct the inspection of out-of-District second-tier BHCs and nonbank subsidiaries that are located in that District, including nonbank subsidiaries held directly by the parent. However, the responsible Reserve Bank has overall responsibility for the consolidated organization and must determine the appropriate scope of the inspection to ensure that it is consistent with the overall supervisory objectives for the consolidated organization. The following guidelines supplement SR-89-25 and SR-79-464.

Consistent with this overall responsibility, the responsible Reserve Bank should also decide, in consultation with the local Reserve Bank, how the inspection will be managed. The examiner-in-charge (EIC) may come from either the responsible Reserve Bank or the local Reserve Bank, or in some instances co-EICs may be appropriate. Selection of the EIC depends on a variety of factors, including the composition of the examination crew, the complexity of the supervisory plan, the condition of the organization, the degree of centralization within the consolidated organization, and the knowledge of local banking conditions. For those inspections involving co-EICs, the EIC from the responsible Reserve Bank will have overall responsibility for the findings and the rating resulting from the inspection. The co-EICs will, of necessity, communicate and coordinate closely, ensuring that all matters affecting the supervised banking organization are carefully considered and presented as a single Federal Reserve position. (See SR-93-48.)

5000.0.7.6 Scope of Inspection

The inspection of the second-tier ought to be conducted on a full-scope basis at least every other inspection. Interim inspections may be done on a limited-scope or targeted-scope basis. Any full-scope inspection of a second-tier BHC should include a review of the loan-administration function and an evaluation of the adequacy of the internal loan-review capability in order to determine the reliance that can be placed on the information by the regulators and the parent.

5000.0.7.7 Need for a Report

When an on-site inspection of a second-tier holding company is conducted, inspection findings should ordinarily be presented in a separate report to its management and a summary provided to the board of directors (in those cases where any outside directors are on the board). The inspection report on the top-tier holding company will incorporate the findings pertaining to any coordinated inspection of the second-tier holding company, either by reference to a separate report to be attached or by inclusion of relevant findings in a summary presented in the body of the report on the top-tier company.

5000.0.7.8 Surveillance and Reporting Requirements

The local Reserve Bank is responsible for maintaining a high level of current awareness of the financial condition and activities of large second-tier holding companies (and other lower-tier companies) in its District. To assist in this regard, quarterly consolidated financial statements on Form FR Y-9C should be requested by the *responsible* Reserve Bank from all second-tier (and lower-tier) holding companies with consolidated assets greater than $1 billion. As is the case with Form FR Y-9LP that is already being submitted by a second-tier holding company, the reporting holding company should be instructed to send the completed Form FR Y-9C directly to the Reserve Bank responsible for the top-tier BHC. The responsible Reserve Bank, in turn, should electronically transmit the data to the Board and also send a hard copy to the local Reserve Bank for its information. Any analysis of the second-tier holding company's condition should be exchanged between Reserve Banks.

5000.0.7.9 Intra-District Multi-Tiered BHCs

In those cases where a multi-tier holding company exists within a single Federal Reserve District, inspection guidelines remain essentially the same as those presented above.

5000.0.8 INTERAGENCY INSPECTION OR EXAMINATION AGREEMENTS

To ensure continuing close coordination and consistency in the examination and supervision of banking organizations, the three federal bank regulatory agencies (that is, the Federal Reserve System, OCC, and FDIC) have adopted two policies intended to enhance the interagency supervision of BHCs and their bank and nonbank subsidiaries.

5000.0.8.1 Interagency Coordination of BHC Inspections and Subsidiary Bank Examinations

The first policy was adopted in conjunction with the Federal Financial Institutions Examination Council (FFIEC) and addresses large and problem holding companies and holding companies with deteriorating financial conditions. The policy requires the agencies to coordinate the BHC inspection and the examination of the lead bank subsidiary for—

1. any BHC with consolidated assets in excess of $10 billion;
2. any BHC or BHC subsidiary lead bank rated composite 4 or 5 (the two lowest rating categories) under the Bank Holding Company Rating System or the Uniform Rating System for banks; and
3. any BHC or BHC subsidiary lead bank rated composite 3 (the middle of the rating categories) whose financial condition appears to have worsened significantly since the last inspection or examination.

It is recognized that substantial problems could develop for a holding company as a result of serious difficulties in significant subsidiary banks other than its largest bank, and the policy as adopted affords the agencies the flexibility to conduct coordinated examinations when any bank, regardless of size, has problems warranting supervisory concern. In implementing this aspect of the policy, the agencies will conduct coordinated examinations when any significant bank subsidiary is rated 4 or 5, or when the financial condition of any other subsidiary causes serious concern about that subsidiary's impact on the condition of the holding company or any other banking affiliate.

5000.0.8.2 Interagency Agreement to Conduct Concurrent Examinations of Certain BHCs and Their Lead Bank Subsidiaries

The second policy implements a program to conduct an annual concurrent examination by the Federal Reserve and the OCC or FDIC of holding companies with consolidated assets greater than $1 billion and their lead bank subsidiaries. The major provisions of this program are as follows:

1. The agencies will conduct concurrent examinations of certain BHCs and their lead bank subsidiaries, as well as any other subsidiary or subsidiaries as appropriate. Concurrent examinations are defined as the performance of certain on-site examination activities by examiners from the agencies on a simultaneous or coordinated basis so as to enhance cooperation, minimize potential duplication, and reduce burden on banking institutions. Concurrence does not necessarily require coincidence of beginning and closing dates of bank and holding company examinations. The geographical location of the lead bank shall determine the district bank and regional office responsible for coordination of examination logistics of all involved subsidiaries.
2. The banking organizations to which this program will apply will be mutually agreed upon by the director of the Division of Banking Supervision and Regulation (FRS) and the senior deputy comptroller for bank supervision (OCC) for holding companies with lead national bank subsidiaries, and by the director of the Division of Banking Supervision and Regulation (FRS) and the

director of the Division of Bank Supervision (FDIC) for holding companies with lead state-chartered nonmember bank subsidiaries. These banking organizations will be specified in a list prepared jointly by the FRS and OCC for holding companies with lead national banks, and by the FRS and FDIC for holding companies with lead state-chartered nonmember banks.

3. In general, this program will apply to holding companies whose lead bank subsidiaries are national or state-chartered nonmember banks and whose consolidated holding company assets are equal to or exceed $1 billion. However, the program may be applied to other holding companies upon the agreement of the FRS, OCC, and FDIC.
4. In general, banking organizations included in the program will be examined annually, although each agency reserves the right not to participate in an examination due to resource constraints or other supervisory imperatives.
5. The agencies will mutually agree on the division and sharing of work assignments and routines for concurrently examining the holding company and the bank, with the goal of minimizing unnecessary overlap, duplication, and burden on the banking organization. In general, the division of examination duties will be based on the locus of primary statutory examination and supervisory responsibility, but will recognize that in some areas the agencies have common supervisory interests and needs for information.
6. Findings, conclusions, recommendations, reports, and transmittal letters pertaining to examinations of the holding company or subsidiaries included in the program should be provided to or discussed with the district bank and regional office of the other agency responsible for coordination of the concurrent examinations before being forwarded to management or directors of the holding company or bank (or banks).
7. Each district bank and regional office receiving examination information from the other agency should inform the other agency on a timely basis of any major findings, conclusions, or recommendations with respect to which the receiving agency substantially disagrees.
8. Before forwarding examination results to management or directors, every effort should be made to resolve significant differences between the district bank and regional office concerning major examination findings, conclusions, and recommendations.
9. Significant differences that cannot be resolved by examiners or officials at the regional office-district level should be referred to the director of the Division of Banking Supervision and Regulation (FRS) and the senior deputy comptroller for bank supervision (OCC) for ultimate resolution, in the case of a holding company and its lead national bank. Cases that involve significant differences at the regional office-district level with regard to a holding company and its lead state-chartered nonmember bank will be referred to the director of the Division of Banking Supervision and Regulation (FRS) and the Director of the Division of Bank Supervision (FDIC) for ultimate resolution. If major differences cannot be resolved, the agencies may proceed with the transmission of examination findings and conclusions to management according to each agency's existing procedures.
10. Reasonable efforts should be made by the agencies to hold joint or combined final interviews and meetings with the management or directors of the holding company and the bank subsidiaries to discuss significant supervisory issues involving examination results. In the ordinary course, the district bank (FRS) would initiate meetings with the holding company, and the regional offices (OCC and FDIC) would initiate meetings with the national or state-chartered nonmember bank subsidiaries, respectively. If such meetings are not appropriate or feasible, each agency should inform the other agency in advance of any plans to meet with management or directors of the holding company or bank to discuss significant supervisory matters, and the other agency should be given the opportunity to attend such meetings or send a representative. If the other agency does not attend or send a representative, significant results of the meetings should be transmitted to that agency.
11. This agreement is intended to foster cooperation and is not meant by the exclusion of other arrangements to preclude other reasonable efforts or cooperative arrangements to strengthen interagency coordination and consistency.
12. Nothing in this agreement precludes or prohibits the agencies from examining any entity for which the agency has statutory

examination authority, or from taking timely supervisory action against any entity for which the agency has statutory supervisory authority.

5000.0.8.3 Interagency Policy Statement on Examination Coordination

On June 10, 1993, an interagency policy statement was developed to strengthen coordination and cooperation among the federal banking agencies responsible for examining and supervising depository institutions and their holding companies, thus minimizing the disruptions and burdens associated with the examination process. The policy expands on existing interagency agreements. (See SR-93-30.)

5000.0.8.3.1 Primary Supervisory and Coordination Responsibility

Examinations or inspections of a particular legal entity are to be conducted by the federal regulatory agency that has primary supervisory authority for that entity. In carrying out its supervisory responsibilities for a particular entity within a banking organization, each regulatory agency, to the extent possible, is to rely on examinations or inspections conducted by the primary regulator of the affiliate, thereby avoiding unnecessary duplication and unnecessary disruption of the banking organization. In certain situations, however, it may be necessary for a regulatory agency other than the entity's primary supervisory authority to participate in the examination or inspection in order to fulfill its regulatory responsibilities.

Primary supervisory authority and coordination responsibilities are organized as follows:

OCC	national banks
FDIC	state nonmember banks
OTS	thrift holding companies and savings associations
FRB	parent BHCs, nonbank subsidiaries of BHCs, the consolidated BHC, and state member banks

The primary federal regulator is responsible for scheduling, staffing, and setting the scope of supervisory activities, including coordinating formal and informal *administrative* actions, as necessary. In fulfilling these responsibilities, the primary regulatory agency is to consult closely with the other appropriate agencies when there is need for coordination.

5000.0.8.3.2 Overview of Examination Coordination and Implementation Guidelines

The agencies are to make every effort to coordinate the examinations and the inspections of banking organizations. Coordinated examinations and inspections may not be practical in all cases because of resource constraints, serious scheduling conflicts, or geographic considerations; however, particular emphasis will be placed on coordinating examinations and inspections of banking organizations with over $10 billion in consolidated assets and those banking organizations (generally, with assets in excess of $1 billion) that exhibit financial weaknesses.

5000.0.8.3.3 Coordinating the Planning, Timing, and Scope of Examinations and Inspections

When multiple regulators have authority over a legal entity, representatives from the appropriate supervisory offices should, if necessary, meet quarterly to discuss supervisory strategies for specific banking organizations. They should meet at least annually to review and establish examination and inspection schedules, to plan for the next year, and to consider the need for coordination in the following areas:

1. sharing the strategy and scope of each examination or inspection
2. determining if agencies other than the primary regulator of a particular entity should participate in the examination or inspection of that entity
3. determining whether a consolidated request letter should be prepared to avoid duplicative information requests
4. sharing workpapers and resultant findings and conclusions from prior examinations and inspections
5. other areas as necessary

5000.0.8.3.4 Interagency Review of Bank, Nonbank, and Parent-Company Activities

Certain functions and procedures—such as internal audit, credit review, and the procedures for determining the allowance for loan and lease losses—transcend the boundaries that distinguish legal entities. Such functions and procedures may be located at the bank or holding company level. The primary regulator of the depository institution and the holding company both may have supervisory responsibility to assess such functions. In these cases, coordinated and concurrent examinations or inspections should be conducted to avoid duplicative reviews and unnecessary disruption.

The primary regulator of the entity being examined or inspected should take the lead in a coordinated examination or inspection, unless there is an agreement that another agency will serve as the lead agency. The responsibilities of the lead agency, in consultation with other appropriate agencies, include developing the scope of the examination or inspection and determining the staff requirements. The lead agency will also coordinate scheduling of the examination or inspection and the presentation of examination or inspection findings to the appropriate management.

5000.0.8.3.5 Joint Meetings Between Regulators and Bank or BHC Management

At the conclusion of examinations or inspections conducted under the guidelines, the agencies should coordinate and plan joint meetings with the board of directors to discuss the findings and conclusions. The agencies will coordinate responsibility as outlined in the guidelines.

5000.0.8.3.6 Significant Differences in Agencies' Findings, Conclusions, and Recommendations

Before examination or inspection results are forwarded to management or boards of directors, every effort should be made to resolve any significant differences in major findings, conclusions, and recommendations. These differences should be resolved by examiners or officials at the regional level within 10 business days of identification. If the regional offices cannot resolve the matter, it should be referred to the national level, where it will be resolved within a reasonable time frame.

5000.0.8.3.7 Inspection and Examination Reports

The primary regulator should prepare the formal report of examination or inspection covering the entity for which it is the primary federal regulator. The primary regulator will also prepare the report when it serves as the lead agency. The report should be addressed and transmitted to the directors of the entity for which the regulator is the primary federal supervisory authority. The report may also be sent to the directors of other entities that have a need for the information. The agencies may agree, if necessary and appropriate, to prepare a joint report.

5000.0.8.3.8 Coordinating Information Requests

Any request for information to be obtained from an entity for supervisory purposes should normally be made through the entity's primary regulator. The primary regulator should also share relevant supervisory information with the other appropriate regulatory agencies.

5000.0.8.3.9 Coordinating Enforcement Actions

When one or more regulatory agencies are contemplating an enforcement action, the agencies should consider initiating a joint enforcement action to address and correct deficiencies within a banking organization. *At a minimum,* each agency considering enforcement action should inform the other agencies. This provision reaffirms the existing interagency enforcement agreement.

5000.0.8.3.10 State Banking Departments

The agencies will endeavor to coordinate with state banking departments, when appropriate and feasible.

5000.0.9 POLICY FOR COMMUNICATING PROBLEMS OF SUPERVISORY CONCERN TO MANAGEMENT AND BOARDS OF DIRECTORS

5000.0.9.1 Introduction

On October 7, 1985, the Board announced a second policy to strengthen and formalize practices for communicating the findings of examinations or inspections to management and boards of directors and to set out guidelines for such meetings. The policy—

1. establishes specific criteria for determining which examination findings require follow-up meetings with boards of directors and sets out guidelines for such meetings,
2. requires that, in addition to providing a complete examination or inspection report to the bank or BHC, a written summary of findings be sent to the bank or BHC for distribution to each director, and
3. requires that senior Reserve Bank officials become more involved in presenting examination findings to boards of directors.

The policy was effective immediately, with initial implementation on January 1, 1986.

5000.0.9.2 Meetings with Directors

The decision to hold a meeting with the board of directors at the conclusion of a state member bank examination or a BHC inspection is to be determined on the basis of the organization's financial condition, its size, the type of examination or inspection conducted, and other factors which, in the judgment of the Reserve Bank, indicate the need for a meeting. To the extent possible, meetings with the boards of directors of state member banks should include representatives of the state banking department. Where appropriate, meetings with the boards of BHCs may be held jointly with the meeting of the lead bank subsidiary's board of directors and the bank's primary federal or state bank supervisor.

5000.0.9.2.1 Criteria for Conducting Meetings

5000.0.9.2.1.1 Condition

For those BHCs with consolidated assets of $1 billion or more, a meeting with the board of directors is to be held at the conclusion of any full-scope inspection in which a BHC is rated BOPEC composite 4 or 5. SR-02-01 stipulates that a meeting between Reserve Bank staff and the board of directors to communicate findings is not required for—

1. complex holding companies with consolidated assets of less than $1 billion; and
2. noncomplex holding companies with consolidated assets of less than $1 billion that have a subsidiary depository institution in less than satisfactory condition, or with a less than satisfactory management rating, or where a material supervisory issue is otherwise indicated.

However, a meeting should be conducted between Reserve Bank staff and the board of directors to communicate findings when supervisory concerns warrant such action.

Except for the above situation, meetings are required if an organization is rated composite 3 and its condition appears to be deteriorating or has shown little improvement since the previous examination or inspection in which it received a composite 3 rating.[10] A meeting should also be held with all these organizations following a limited-scope or targeted examination or inspection, if deemed appropriate and desirable by the Reserve Bank. (See SR-95-19.)

5000.0.9.2.1.2 Size

A meeting will be required at the conclusion of a full-scope examination or inspection of all multinational organizations and major regional organizations with assets in excess of $5 billion. Reserve Banks also are encouraged to conduct such meetings at the conclusion of a full-scope examination or inspection of regional institutions with assets $1 billion or more.

5000.0.9.2.1.3 Guidelines for Meetings

Meetings with boards of directors will have to be tailored to meet the needs of each specific situation. In general, meetings with the full board are preferred, but in certain cases the Reserve Bank may determine that a meeting with a committee of the board of directors, such as the executive or audit committees, will serve adequately. In all cases, however, the written summary of examination or inspection findings is to be provided to each member of an organization's board of directors.

For BHCs with consolidated assets of $1 billion or more, the Reserve Bank's presentation to the board should ordinarily be chaired by a Reserve Bank official, with the examination staff in attendance. The larger the organization or

10. Reserve Banks also are encouraged to hold a meeting at the conclusion of a full-scope inspection of an organization with assets of $1 billion or more rated composite 2 if its condition appears to be deteriorating, and with those organizations rated composite 3 even if showing some improvement.

more serious its problem, the more senior the Federal Reserve official should be.

Reserve Bank presidents are expected to become directly involved in the supervision of multinational organizations and regional institutions with over $5 billion in assets that have been rated composite 3, 4, or 5. Reserve Banks have the discretion to determine the circumstances under which the participation of Reserve Bank presidents is appropriate and necessary. It may be necessary for the Reserve Bank president to meet with the board of directors and become involved in other ways; the precise nature of involvement will depend on the situation.

A meeting with the board of directors should include a formal, structured presentation containing a clear statement that an institution is considered a ''problem'' institution[11] or is about to become a problem institution if existing conditions deteriorate. Use of slides, other visual aids, and hard-copy handouts is encouraged. Information should also be presented on financial trends and peer-group comparisons. The presentation should make clear the nature of problems uncovered, such as—

1. deficiencies in capital, asset quality, earnings, or liquidity;
2. violations of law;
3. inadequacies in policies, practices, and reporting systems necessary for the proper administration of the organization;
4. lack of well-documented lending, collection, investment, and liability-management policies;
5. failure of management in addressing previously discussed deficiencies;
6. lack of reporting systems sufficient to keep senior management and the board of directors fully informed; and
7. failure of the board of directors to participate in the active management of the organization.

For BHCs with consolidated assets of less than $500 million, the Reserve Banks, effective March 30, 1995 (SR-95-19), were provided the discretion to have senior supervision or examination staff represent the Reserve Bank in meetings with the directors of banks and BHCs. Conference calls with directors may be made in place of on-site meetings for these BHCs when considered appropriate and if an on-site meeting was held following the previous inspection.

11. As has been long-standing Federal Reserve practice, the exact composite or component ratings assigned in the examination or inspection are not to be disclosed to persons other than the directors or senior management. (See section 4070.0.9.)

5000.0.9.3 Summary of BHC Inspection Findings

The Federal Reserve Banks will provide special written reports summarizing the results of the inspection findings to BHCs in the following situations (see SR-85-28):

1. An organization is rated composite BOPEC 3, 4, or 5 (except for organizations rated BOPEC 3 or 4 when a written summary report was provided on a preceding inspection (see SR-95-12); the organization has been taking actions to comply fully with the provisions of that report; and, in the examiner's judgment, no good purpose would be served by issuing another summary report).
2. An organization is rated composite 1 or 2 but is showing signs of a significant deterioration in condition or an apparent violation of law.

Examiners in these and other cases may decide to issue summaries to board members when the summaries will prove constructive in resolving potential or actual problems.

The inspection report page ''Examiner's Comments and Other Matters Requiring Special Board Attention'' may serve as the full text of the summary report to directors and should be written with that purpose in mind. The discussion on the page (and thus in the summary report) should focus on identified problems of the organization rather than its strengths. Problems should be presented in a succinct and unmistakably clear manner. The types of actions to be taken by the directors and management to address these problems should be specifically noted. Institutions rated 4 or 5 are to be told they are ''problem'' institutions that warrant ''special supervisory attention.'' Institutions rated 3 are to be informed that their condition is not satisfactory, that they are subject to more than normal supervision, and that they may become ''problems'' if their weaknesses are not addressed adequately.

The summary report will be sent directly to the banking organization's management for their distribution to each director. The transmittal letter to the banking organization is to state that the report is a summary of identified problems and contemplated supervisory actions and to request that management distribute the report to each director. The letter is to state further that each director should read the report, sign the introductory statement attesting to having read the report, and return the report to management. Management is to keep on file copies of the statements signed by the directors, but is to destroy all but a file copy of the summaries themselves.

To provide the directors with prior notice of the deficiencies to be discussed, the directors' summary report is to be completed and distributed before any Reserve Bank meeting with the board of directors. Reserve Banks should also make every effort to distribute the complete examination or inspection report to management before meeting with directors.

5000.0.10 SUMMARY TO DIRECTORS OF INSPECTION FINDINGS

SUMMARY TO DIRECTORS OF INSPECTION FINDINGS

Prepared by the
Federal Reserve Bank

____

For the Board of Directors of

____

____

Inspection Conducted As of

____

This summary is the property of the Board of Governors of the Federal Reserve System and is furnished to members of the board of directors of the bank holding company inspected for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission. Under no circumstances should the holding company, or any of its directors, officers, or employees disclose or make public in any manner the report or any portion thereof. In reviewing this summary, it should be kept in mind that an inspection is not the same as an audit report.

THIS SUMMARY SHOULD BE HELD IN STRICTEST CONFIDENCE

5000.0.10 SUMMARY TO DIRECTORS OF INSPECTION FINDINGS—Continued

Summary Signature Page

The attached summary of an inspection of ____________________________ completed on _______________________________, has been prepared to assist members of the board of directors of the bank holding company in fulfilling their fiduciary responsibilities. As a member of the board you are urged to review this summary and the inspection report as soon as possible.

As an elected member of the holding company's board of directors, you have a duty to ensure that the organization is operated in a safe and sound manner. You may be held liable for losses caused by your failure to supervise properly the affairs of the holding company. It is suggested that you review one or more of the publications that explain the functional and legal responsibilities of a director.

Congress has placed great emphasis on the role of holding company directors and officers by passing legislation allowing regulatory authorities to use ''cease and desist'' actions against individuals, to assess civil money penalties, and even to remove an officer or director demonstrating willful or continuing disregard for safety and soundness considerations.

This summary is the property of the Board of Governors of the Federal Reserve System and is furnished to members of the board of directors of the bank holding company inspected for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission. Under no circumstances should the holding company, or any of its directors, officers, or employees disclose or make public in any manner the report or any portion thereof. In reviewing this summary, it should be kept in mind that an inspection is not the same as an audit report. After reviewing this summary, please sign below and return this entire document to the bank holding company.

I have received and read the attached summary of the inspection of ________________________ by the Federal Reserve Bank of _______________ conducted as of __________________________.

Date

5000.0.10 SUMMARY TO DIRECTORS OF INSPECTION FINDINGS—Continued

Summary of Inspection Findings

5000.0.11 COMPLETION STANDARD FOR INSPECTION REPORTS

Inspection reports issued by the Federal Reserve must be completed and mailed within 60 calendar days, beginning with the day following the examiner's exit meeting. This standard applies to all inspections, regardless of the complexity of the BHC. For BHCs rated 3, 4, or 5, Reserve Banks are encouraged to follow an internal target of 45 calendar days for processing and mailing reports. When reports are issued jointly with other state banking agencies, this standard may be extended at the discretion of the senior management at the Reserve Bank. (See SR-93-4.)

5000.0.12 COMBINED EXAMINATION/INSPECTION REPORT FOR BHCs WITH LEAD STATE MEMBER BANKS

Reserve Banks are permitted, under the circumstances and procedures specified in SR-94-46, to issue a combined report for a BHC and its lead state member bank subsidiary. A letter should be sent to the qualified holding companies that explains their option of receiving a combined report. The combined report may be issued when—

1. a BHC's lead bank subsidiary is a state member bank,[12] and
2. the holding company's board of directors formally approves, by board resolution, a combined report being released to its lead state member bank subsidiary.

A combined examination/inspection report format is attached to SR-94-46. At a minimum, a combined report will contain all examination report pages required by the interagency bank examination report instructions, as well as information on the parent holding company, its bank and nonbank subsidiaries, and the consolidated BHC organization. For detailed information on required and optional report pages, see section 6000 of the *Commercial Bank Examination Manual* and sections 5010.0 to 5010.43 of this manual.

Separate examination and inspection Supervisory Information System (SIS) entries are required for each combined report. The combined report's cover page is to be green, must provide BHC and Bank RSSD[13] numbers, and must clearly indicate that the report is a combined report.

12. In cases where the company has more than one state member bank, separate examination reports should be prepared for all other state member bank subsidiaries.

13. Research, Statistics, Supervision and Regulation, and Discount and Credit (RSSD)

This ‘‘full-scope’’ report is designed to be used as a minimum standard in reporting the results of a bank holding company inspection. The report to be provided to the bank holding company consists of a Core Section and an Appendix Section, the latter consisting of certain required financial statements. Supporting schedules are added to the Core or Appendix Sections when an area of concern or problem is addressed. Such schedules provide detailed information relevant to a particular activity area.

The Core Section contains a table of contents, a summary of the scope of the inspection, and a page that presents the examiner’s comments and discusses matters requiring special Board attention. Also, the Core Section should contain an analysis of financial factors, including an assessment of the quality of assets and a complete analysis of the BOPEC components. Specifically, the Core Section is made up of the pages described in the following subsections.

5010.1.1 CORE SECTION

The inspection report format contains the following pages in the Core Section:

Page No.	*Page Title*
	Standard Report Cover
i.	Table of Contents
1.	Examiner’s Comments and Matters Requiring Special Board Attention
2.	Scope of Inspection and Abbreviations
3.	Analysis of Financial Factors
4.	Audit Program

5010.1.2 APPENDIX SECTION

The Appendix Section will consist of a mandatory section that presents the following financial statements for the organization:

- Parent Company Comparative Balance Sheet
- Parent Company Comparative Statement of Income and Expenses
- Consolidated Comparative Balance Sheet
- Consolidated Comparative Statement of Income and Expenses

Bank holding company inspections should be conducted as of the latest fiscal quarter. All financial statements should be presented as of the most recent calendar quarter. The dollar amounts are reported in thousands.

Financial statements prepared by the bank holding company may be used to meet these requirements provided they are prepared in accordance with generally accepted accounting principles and are, in the examiner’s judgment, suitably detailed, clear, and accurate. Any adjustments to any financial statements made by the examiner should be footnoted. Any other supporting schedules or visual aids (for example, graphs or charts) can be included in the Core Section to communicate and/or support the examiner’s findings. Percentages should be rounded to the nearest tenth of 1 percent, unless finer detail is necessary.

5010.1.3 OPTIONAL PAGES TO BE INCLUDED IN THE CORE OR APPENDIX SECTIONS

Supporting Report Pages for All Inspections

The listed optional report pages are to provide support[1] to the Core or Appendix Section of the report. They will normally be sequenced as listed below. If a problem area is cited within the Core Section, the respective typed supporting report pages need to be included to support the critical comments. The optional pages listed in this section are to be included by the examiner in the report when they convey significant

1. Supporting report pages refers to information gathered in essentially the same format as when the page is being prepared by the examiner for inclusion in the report. However, certain information may not provide sufficient value to address an area of concern in the report, but should be retained in workpaper form to provide evidential matter for the inspection report. For example, the Statement of Changes in Stockholders’ Equity may be summarized in an audit report or may be included with the company’s audited annual financial statements. The examiner reviews the statement and concludes that the information is reliable and complete and that it agrees with the respective balances reported in the inspection report. A photocopy of the information could be used to provide evidence of the examiner’s review, including any related notes.

findings in the Core Section or when they support the discussion in the Core Section with an Appendix page. If appropriate standardized report pages do not exist to address a particular area of concern, the relevant analytical support can be included on the ''Other Matters'' page as part of the inspection report. Any or all supporting report pages and workpapers should be available to be forwarded immediately to Board staff, if requested.

The designated supporting report pages are—

- Policies and Supervision
- Summary of Consolidated-Classified and Special-Mention Assets, and Other Transfer Risk Problems
- Consolidated Capital Structure
- Capital Structure (lead bank subsidiary)
- Treasury Activities/Capital Markets
- Violations
- Other Matters
- Classified Assets and Capital Ratios of Subsidiary Banks[2]
- Organization Chart
- History and Structure
- Investment in and Advances to Subsidiaries
- Commercial Paper (Parent)
- Lines of Credit (Parent)
- Commercial Paper/Lines of Credit (Parent) (including questions)
- Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)
- Statement of Changes in Stockholders' Equity
- Income from Subsidiaries (Fiscal and Interim)
- Cash Flow Statement (Parent) (including questions)[3]
- Parent Company Liquidity Position
- Parent Company and Nonbank Assets Subject to Classification
- Bank Subsidiaries
- Nonbank Subsidiaries
- Nonbank Subsidiary Financial Statements
- Fidelity and Other Indemnity Insurance
- Other Supervisory Issues
- Extensions of Credit to Bank Holding Company Officials and Their Related Interests and Investments in and Loans on Stock or Obligations of Their Related Interests
- Interest Rate Sensitivity—Assets and Liabilities

In addition to the FR 1225 report pages, a few replacement report pages are designated as FR 1241 pages. The following pages are designed and are to be used for smaller bank holding companies having less than $150 million in assets:

- Capital Structure (lead bank subsidiary)
- Bank Subsidiary
- Other Supervisory Issues

5010.1.4 CONFIDENTIAL SECTION FOR ALL INSPECTION REPORTS

The confidential section for bank holding company inspection reports is reserved for confidential comments that will be limited to staff of the Federal Reserve System. The Confidential Section of the inspection report will consist of the following pages:

Page	*Page Title*
A.	Principal Officers and Directors
B.	Condition of the Bank Holding Company
C.	Liquidity and Debt Information
D.	Administrative and Other Matters

Discussion presented in the confidential section should be kept to a minimum. As much information as possible should be incorporated in other sections of the report that are available to the bank holding company. The complete analysis of the holding company organization (that is, BOPEC components) is to appear in the front of the report on the ''Analysis of Financial Factors'' page. The information reported on these confidential pages should be printed on yellow paper.

5010.1.5 GENERAL COMMENTS FOR ALL REPORT PAGES

The specified format of the report pages should be used whenever possible, but when flexibility is necessary, additions and limited deletions can be made. Examiners are required to include in the Core Section only a relatively small number

2. Included if assets are classified and/or written up as required.

3. This page is required to be included in the inspection report for bank holding companies with consolidated assets in excess of $1 billion or those companies that have substantive fixed charges or debt outstanding, as well as select other organizations at the option of the Reserve Bank.

of report pages and, in the Appendix Section, only financial statements for the organization. These pages will normally be sequenced as listed previously. At the same time, examiners have the discretion to decide whether to include other standard pages in a report and whether to include them in the Core or the Appendix Sections. This choice should be made on the basis of whether the content of the page will highlight a significant inspection finding (in which case, the finding should be included in the Core Section) or whether the content will provide support for comments offered in the Core Section (in which case, the finding should ordinarily be placed in the Appendix Section).[4] Given the discretion being accorded examiners to tailor reports to accurately convey inspection findings, reports prepared for large and small companies alike should be prepared to achieve that objective.

Another important objective is to avoid excessive length in the report, particularly in the open section, that can result from including comments that may provide directors and management with information of marginal importance or from repeating findings and conclusions on different pages of the report.[5] In addition, reports should be understandable and readable. A further objective is for examiners to determine precisely what should be conveyed in their reports to boards of directors and management and then to present that information in clear and concise language.

All reports are to be on 8½- by 11-inch paper, bound on the left margin. Responses to questions should be provided below the last question in the section or, if necessary, on an additional page. Do not repeat the question in the response. Indicate the question number in the response.

All credit-extending nonbank subsidiaries will be subject to asset classification. The examiner should recommend that management maintain a loan-loss reserve that is adequate to offset 100 percent of assets classified loss and still have a balance sufficient to absorb normal unidentified, unanticipated, future losses from operations. The examiner and BHC management should consider the guidance provided in section 2065.2 on the determination of an adequate level for the Allowance for Loan and Lease Losses. Examiners should also review the organization's loan-loss history to determine trends and to help evaluate the adequacy of the existing reserve.

4. If a problem area is cited within the Core Section, inclusion of the listed, typed, supporting report pages will be necessary to support the critical comments.

5. While brevity is an important goal, examiners should note that, when an enforcement action is contemplated, the inspection report must fully support the proposed provisions of the enforcement document.

The official name, location, and the RSSD ID number of the bank holding company being inspected is to be provided. Also provide the dates the inspection commenced and concluded as well as the inspection date. The cover includes a notice that its content is strictly confidential.

The cover must include the official seal of the Board of Governors of the Federal Reserve System. It may also include the names and seals of the Reserve Bank and the state bank supervisory agency that participated in the inspection as part of a cooperative inspection agreement.

FR 1225–Cover
(Revised 7/94)

REPORT OF
BANK HOLDING COMPANY
INSPECTION

Name: ______________________________ Inspection Commenced: ______________________________

Location: ______________________________ Inspection Concluded: ______________________________

RSSD ID Number: ______________________________ Inspection Date: ______________________________

THIS REPORT OF INSPECTION IS STRICTLY CONFIDENTIAL

This report has been prepared by an examiner selected or approved by the Board of Governors of the Federal Reserve System. The report is the property of the Board of Governors and is furnished to directors and management for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 USC 1817(a) and 1831m) and in the regulations of the Board of Governors (12 CFR 261.11). Under no circumstances should the directors, officers, employees, trustees or independent auditors disclose or make public this report or any portion thereof except in accordance with applicable law and the regulations of the Board of Governors. Any unauthorized disclosure of the report may subject the person or persons disclosing or receiving such information to the penalties of Section 641 of the U.S. Criminal Code (18 USC 641). Each director or trustee, in keeping with his or her responsibilities, should become fully informed regarding the contents of this report. In making this review, it should be noted that this report is not an audit, and should not be considered as such.

FEDERAL RESERVE BANK OF

The table of contents indicates the report pages included in the report and the sequential numbering of pages within the report. All pre-numbered Core Section inspection report pages are included in each table of contents along with any other supporting report pages. Supporting report pages will be numbered sequentially in FR 1225, starting with page number ‘‘11’’.

If included, individual subsidiaries may be listed with their respective page numbers, or they may be grouped such as ‘‘Nonbank Subsidiaries’’ with a page reference such as ‘‘26–26c’’ to indicate the number of such subsidiaries. At the bottom of the page, insert the commencement date of the previous inspection followed by the date of the financial statements in parentheses.

The report page is to include a summary of the examiner's findings relating to—

- violations,
- criticisms,
- special comments,
- matters requiring special board attention, and
- recommendations.

In addition, it will also include the BOPEC financial composite rating (see SR-88-37 and section 4070.0.9). Beginning in January 1997, component ratings for the current inspection and the two prior inspections will be reported at the top of the page as illustrated below (see SR-96-26). Component ratings should only be detailed if the date of the inspection is after January 1, 1997.

BOPEC Rating System

Inspection Date:	*Current Inspection 09-03-X7*	*Prior Inspection 10-19-X6*	*Prior Inspection 8-22-X5*
Composite rating:	2	2	2
Component ratings:			
Banks	2		
Other (nonbank subsidiaries)	2		
Parent company	2		
Earnings	2		
Capital adequacy	2		
Management	S		

This listing should be followed by the uniform definition of the assigned composite rating. The uniform definitions of the component ratings assigned need not be included in reports; however, they should be made available to management and directors upon request.

When a combined examination/inspection report format is used, similar matrices for each composite and component rating assigned should be included in the report.

Numeric and alphabetic component ratings should also be included on the pages of reports that discuss findings related to the components.

The purpose of this report page is to communicate to the holding company's board of directors and its management the examiner's views on the overall condition of the company, significant problems that have been identified in the inspection, and actions the company's board of directors and management need to take to correct the company's problems and strengthen its condition. The comments should summarize only material concerns, criticisms, analyses, or violations, referring the reader to an appropriate optional report page for additional detail. The use of subcaptions to identify and separate the areas subject to comment is encouraged.

The comments are generally written on an exception basis. Avoid laudatory comments. The examiner may, however, comment on improvements initiated by management.

Items suitable for discussion within the Examiner's Comments and Matters Requiring Special Board Attention report page include, but are not limited to—

- policies and supervision of subsidiaries,
- earnings,
- cash flow or liquidity,
- level of classified assets,
- adequacy of capital,
- borrowings,
- condition of subsidiaries,
- violations of the Bank Holding Company Act and Regulation Y,
- violations of section 23A and/or section 23B of the Federal Reserve Act and other statutes,
- fees and dividends being paid to the parent by subsidiaries,
- audit function, and
- information that is to serve as an alternative to issuing a separate Summary to Directors of Inspection Findings.

Any substantive recommendations contained elsewhere in the inspection report should be presented briefly in the core page entitled "Examiner's Comments and Matters Requiring Special Board Attention." A summary comment relative to the adequacy of the BHC's oversight of its subsidiaries may be provided. Any comments that refer specifically or indirectly to details presented elsewhere in the report should be consistent with that information. Each inspection report page entitled Examiner's Comments and Matters Requiring Special Board Attention will be written to accomplish these objectives: give an overall assessment of the condition of the company, discuss significant problems, and specify needed corrective action. In cases of composite ratings of 3, 4, and 5, the text of this page will also be used for the summary report. The signature of the examiner-in-charge should appear below the comments.

The scope of the inspection describes generally the coverage parameters of the inspection. When determining the scope of the inspection, the examiner must consider the Board's policy statement on the examination and inspection of state member banks and bank holding companies (October 7, 1985, S-2493). See sections 5000.0.7 to 5000.0.9.

The scope generally includes a presentation of the following:

- the purpose for the inspection
- which subsidiaries were inspected on-site and which were done from the parent's location
- the depth of inspection coverage[1]
- an identification of the peer group(s) and the bank holding companies used for comparison with the bank holding company being inspected
- the source of information regarding the administration of policies and the supervision over subsidiaries
- comments as to the extent examiners relied on internal classification systems or classifications of other bank regulatory agencies
- the senior officers with whom the overall inspection findings were discussed
- the sources upon which the examiner based his conclusions and/or recommendations

The opening paragraph of the scope should include authority under which the inspection was conducted (section 5(c) of the Bank Holding Company Act of 1956, as amended), and may include the dates the inspection commenced and closed, and the date(s) of financial statements used as the basis for the inspection.

In brief paragraphs, the examiner should also indicate what minute books were read, which nonbank subsidiaries were examined, what size loans were reviewed in credit-extending subsidiaries, with whom corporate policies were discussed, and to what extent banking subsidiaries were reviewed.

The report page will also include explanations of abbreviations used in the report. Generally, abbreviations familiar to the BHC should be used. However, efforts should be made to incorporate at least a part of the name into the abbreviation as opposed to relying strictly on initials which tend to become confusing. Also, it is desirable that abbreviations of bank subsidiaries include the word ''bank'' to distinguish them from the parent company and/or nonbank subsidiaries with similar names.

1. This includes a statement as to the percentage of loans reviewed in each credit-extending nonbank subsidiary, without consideration to statistical sampling or any form of extrapolation. The ratio will include loans actually reviewed by Federal Reserve examiners divided by total loans in each nonbank subsidiary. When different categories of loans are housed in a nonbank subsidiary, it may be relevant to provide a breakdown by percentage of loans reviewed for each category of loans, further segregated by current and delinquent categories. See SR-90-26.

The Analysis of Financial Factors presents a complete financial analysis of the components (nonconfidential BOPEC comments) of the holding company—parent, bank subsidiaries, nonbank subsidiaries, and consolidated (as applicable)—supported and followed by parent and consolidated financial statements, consolidated asset quality, and consolidated capital ratios. See section 4000 for specific information on analyzing financial factors.

The analysis is to serve the informational needs of senior management of the holding company and the supervisory authorities by presenting both positive and negative factors affecting the condition of the major components and the consolidated company. Such analysis helps identify problems or potential problems and measures the holding company's ability to be a source of financial strength to its subsidiaries. This analysis is considered one of the most important parts of the report.

The information is available from discussions with management, financial statement data within the report, published statements such as the SEC Form 10-K, and unpublished information sometimes available through the offices of the officer in charge of finance, the treasurer, or the comptroller.

5010.6.1 PARENT COMPANY

For the parent company, present an analysis of each of the financial factors in narrative form. Tables may be used to support the narrative analysis.

The analysis of the parent should include a discussion of the following: debt structure (with indications of how debt proceeds are used), debt/equity ratios (with comparisons to previous years), sufficiency of cash flow, sources and stability of income, interest coverage, dividend-payout ratios, classifications of parent company assets, changes in dividend policy, comparisons to peer group, and a conclusion about whether the holding company is considered to be a source of financial strength to its subsidiaries.

Within the analysis of the parent, the examiner should also include comments regarding whether dividend payments to stockholders have been reasonable, considering the parent's leveraged position, debt servicing, cash flow, and capital needs. The examiner should describe how dividend policy is formulated and what the policy is. See the Board's policy on cash dividend payments in section 2020.5.1.

Dividends paid by subsidiaries, both bank and nonbank, to the parent company are the means by which a cash return is realized on the investment in subsidiaries, thus enabling the parent to pay dividends to its shareholders and to meet its debt-service requirements and other obligations. The examiner will need to conclude and discuss in the report whether dividend assessments of any subsidiary are excessive. The examiner can draw conclusions about excessive dividends based on discussions with management concerning dividend policies and information that may be contained in the report, such as—

1. peer-group averages,
2. the condition and capitalization of each subsidiary,
3. the type of subsidiary (credit-extending subsidiaries need more capitalization than service subsidiaries),
4. the bank holding company's reasons for extracting proportionately more or less from each subsidiary,
5. past policy and payments, and
6. compliance with regulatory policy and guidelines.

5010.6.2 BANK SUBSIDIARIES

A summary write-up should be prepared for each bank subsidiary comprising 10 or more percent of the bank holding company's consolidated assets and/or bank subsidiaries evidencing material financial deficiencies or other characteristics that should be brought to the attention of the bank holding company's board of directors.[1] These write-ups should summarize noteworthy examiner comments from the open section of the latest reports of examination of the subsidiary bank(s) and comment on any actions taken to correct significant weaknesses or violations. The summary should also include an analysis of the level and trend of earnings and classified assets, and the adequacy of capital (for example, Tier 1, total capital, and leverage ratios).

1. In determining the subsidiary banks that require write-ups, examiners should be mindful of the effect that the cross guarantee provisions of FIRREA can have on nontroubled bank subsidiaries.

For the other bank subsidiaries, the examiner should provide an overall summary: the number of subsidiaries by composite rating, an overall analysis of the level and trend of earnings, classified assets, capital (that is, capital adequacy), and any other financial analysis indicators.

5010.6.3 NONBANK SUBSIDIARIES

The examiner should present an analysis of the condition and an analysis of the risk assessment of nonbank subsidiaries. The analyses presented within this report page should support the nonbank component of BOPEC without causing the reader to refer to other report pages.

Because of the number of nonbank subsidiaries of a bank holding company, it may not be possible or reasonable to discuss the condition and risk assessment of each subsidiary in this section of the inspection report. The analysis presented on this page should, therefore, be based on the combined performance of the nonbanking activities. However, if the company has significant or troubled credit-extending nonbank subsidiaries, individual analyses of each of these subsidiaries should be included.

The analysis of nonbank subsidiaries should include information on the nonbank's financial condition, including the level, trend, and quality of earnings; composition of the loan portfolio; level and trend of classified, past-due, and nonperforming assets; and the adequacy of the loan-loss reserve, capital, financial management of debt-to-equity ratios, and funds management. The combined risk assessment should address the funding risk, earnings exposure, operational risks, asset quality, capital adequacy, contingent liabilities and other off-balance-sheet exposures, management information systems and controls, transactions with affiliates, growth in assets, and the quality of oversight provided by the management of the bank holding company and nonbank subsidiary (see SR-93-19). Conclude with a general statement on the condition and overall risk assessment of the nonbank subsidiaries.

5010.6.4 CONSOLIDATED

Present an analysis of the consolidated balance sheet, including levels and trends of debt, the adequacy of capital (Tier 1, total capital, and leverage ratios), growth in loans, assets and liabilities, and peer-group comparisons. Also present an analysis of the consolidated earnings trends, asset quality, and the adequacy of valuation reserves. Such analysis should include comments on performance results based on net interest margins, return on average assets, return on average equity, factors influencing earnings, and peer-group comparisons. Include a statement on the condition of the company, including its reliance on interest-sensitive funds and its ability to borrow additional short- or long-term funds or to issue new capital stock.

5010.6.5 GENERAL INSTRUCTIONS

The examiner should make certain that—

1. the figures and comments related to the parent are consistent with the various parent-company financial statements;
2. the analysis of bank subsidiaries is consistent with data included on the ‘‘Bank Subsidiaries’’ and the ‘‘Classified Assets and Capital Ratios of Subsidiary Banks’’ pages;
3. the analysis of nonbank subsidiaries is consistent with data on the ‘‘Nonbank Subsidiary,’’ ‘‘Nonbank Subsidiary Financial Statements,’’ and ‘‘Nonbank Company Assets Subject to Classification’’ report pages;
4. the consolidated analysis is consistent with information presented throughout the report, primarily with the consolidated financial statements and the unaffiliated borrowings on the ‘‘Liquidity and Debt Information’’ confidential page ‘‘C’’;
5. all names are the same as those on the ‘‘Scope and Abbreviations’’ Core page 2, the ‘‘Organization Chart’’ page, and other report pages and tables within the report; and
6. all debt figures agree with the unaffiliated borrowings of the ‘‘Liquidity and Debt Information’’ confidential page ‘‘C.’’

This page presents the adequacy of the internal audit program, the effectiveness and quality of the overall audit program, and the BHC's relationship with its external auditor. See section 2060.1 for related information.

The examiner's review of the BHC's internal audit program will establish whether the program is adequate to effectively audit the BHC's operations regularly. It will also help determine whether the audit function provides the directors with sufficient information on the corporation's conditions and operations. The review will allow the examiner to determine the external auditor's role and relationship with the internal auditor.

The information on the audit program is available from the auditor, audit committee, the audit staff, and the internal audit reports. Information on the external auditor should be available from the management letter, the internal auditor, and the audit committee minutes.

Comments on the internal audit program may include an appraisal of the effectiveness of the program at meeting the frequency guidelines for auditing subsidiaries, information on the recipients of audit reports, and the party to whom the auditor is responsible. The examiner's comments on the external auditor may include the name of the firm, the scope of the audit, the degree of interface with the internal auditors, any ''qualified opinion'' submitted by the independent auditors in certifying the most recent years' financial statements, and any pertinent comments regarding relations with the directors' audit committee. The comments should conclude with an appraisal of the quality and effectiveness of the overall audit program.

The following is a list of suggested questions for the internal auditor in developing comments for this section:

5010.7.1 INTERNAL AUDITOR

1. How is the audit staff organized? To whom do they report?
2. What are the educational backgrounds and experience of the staff?
3. What is the size of the staff and the length of time that most of the staff have been in audit? Is the staff large enough to meet the functional requirements of the job under the guidance and leadership of the auditor? Is the department used as a training ground for other departments?
4. What is the schedule for the audit of banking and nonbanking subsidiaries and for particular departments therein?
5. Are copies of audit programs and reports available for the Federal Reserve's review?
6. Are audit programs coordinated with and workpapers reviewed by outside accountants?
7. Are qualified EDP auditors on the staff?

Although more information is obtained through interviews with the auditor, as opposed to receiving responses to written questions, these questions represent a general framework on which the conversation may develop.

5010.7.2 EXTERNAL AUDITORS

1. Have independent public accountants audited the bank holding company's consolidated financial statements for the FR Y-6 annual report if the BHC's consolidated assets exceed $500 million or more?
2. Does the external auditor work with the internal auditor in establishing the scope and frequency of audits?
3. In addition to performing some of the basic functions of the internal auditor, did the external auditor review the internal auditing program to assess its scope and adequacy?
4. When the BHC does not have sufficient earnings to employ an internal audit staff, yet the complexities of the organization necessitate the need for an audit, has an external auditor been engaged for this purpose?
5. Does the external auditor have the ability to conduct surprise audits and sufficient flexibility for establishing the scope of the audits and in making recommendations on internal control changes?
6. Have the BHC's insured depository institutions furnished their independent auditors with the required call reports, memorandums of understanding, written agreements, and other designated supervisory information required by section 7(a) of the FDIC Act (see section 2060.1.1)?

The comments detailed on this report must be consistent with summarized comments on the Policies and Supervision page and the Other Supervisory Issues page (item 8). Any noteworthy deficiencies in the audit program may be included on the Examiner's Comments and Matters Requiring Special Board Attention, core page 1, at the examiner's discretion.

The comparative balance sheet presents the composition of the parent company's balance sheet as to assets, liabilities, and capital and should be representative of the functions and activities of the company. The comparative balance sheet allows the reader to compare changes in accounts on a line-by-line basis from one period to another. It aids and gives written support to the financial analysis.

The parent company balance sheets may be requested in the officer's questionnaire or may be obtained from the accounting department. Fiscal statements can also be found in the most recent SEC Form 10-K and the FR Y-6 and Y-9 LP.

The detail on the most recent balance sheet accounts should be reconciled to subsidiary ledgers or a detailed trial balance. The statements should be adjusted to reflect generally accepted accounting principles. Adjustments should be footnoted. The statements should be presented in four columns with two interims and two fiscals except for year-end inspections when only two fiscals are required. The presentation should be (from left to right) current interim period, prior interim period, current fiscal, and prior fiscal. The statement may be formatted like the FR Y-9 LP.

The parent company comparative balance sheet should have specific detail or schedules supporting balance-sheet accounts and amounts as follows.

1. Show investments in and advances to subsidiaries as separate accounts, with separate subtotals for banks and nonbanks.

2. Provide supplementary schedules on the ''Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)'' page showing a breakdown of accounts not detailed in the report, such as marketable securities, CDs, and other investments when considered appropriate or when the account exceeds 25 percent of total footings.

2. Break out goodwill and other intangibles from ''Other Assets'' or ''Investments in Subsidiaries,'' and detail on the ''Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)'' page.

3. Break out ''other real estate owned'' from ''Other Assets,'' and detail on the ''Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)'' page.

4. ''Other Assets'' and ''Other Liabilities'' should be broken down and detailed on the ''Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)'' page if any item in the account is considered significant.

5. Mandatory convertible debt instruments should be shown separate from subordinated capital notes and debentures and detailed on the unaffiliated borrowings on the ''Liquidity and Debt Information'' confidential page ''C.''

6. Stockholder's equity should contain the following categories, as applicable: common stock, perpetual preferred stock, limited life preferred stock, capital surplus, retained earnings (undivided profits), reserves for contingencies and other capital reserves. Limited life preferred stock should be shown separate from stockholders' equity. For all capital stock issues indicate in a footnote the par value and the number of shares authorized and outstanding for each period. If there is more than one type of stock, indicate the voting rights, preferential dividend rights, and conversion rights, where applicable.

The examiner should make certain that the—

1. investments in subsidiaries equals the investments detailed on the ''Investment in and Advances to Subsidiaries'' page,

2. advances to subsidiaries equals advances detailed on the ''Investment in and Advances to Subsidiaries'' page,

3. commercial paper total equals the commercial paper totals detailed on the Commercial Paper (Parent) page and the ''Liquidity and Debt Information'' confidential page ''C,''

4. total of short-term and long-term debt equals the same totals for unaffiliated borrowings on the ''Liquidity and Debt Information'' confidential page ''C,''

5. ''Other Assets'' and any other accounts detailed on the ''Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)'' page reconciles to the corresponding items on the page (the ''Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)'' page may show only significant items in the categories without totals), and

6. parent's equity accounts equal those on the ''Statement of Changes in Stockholder's Equity'' and on the ''Consolidated Comparative Balance Sheet'' page.

The comparative income statement presents income of the parent available to satisfy expense requirements. It also can be an indicator of the structure of services and activities provided at the parent level.

The purpose of the statement is to determine—

- the levels and types of intercompany income,
- that the sources of external income are consistent with authorized activities,
- the changes in corporate policy via changes in intercompany income, and
- that the types and levels of the parent's expenses are appropriate for the parent's activities.

All statements of income and expenses should be requested in the officer's questionnaire. Fiscal information can be found in the holding company's annual report to shareholders, FR Y-6, and/or SEC Form 10-K. Interim results are generally requested from the corporation's accounting or comptroller department.

Two interims and two fiscals should be presented unless the inspection is as of fiscal year-end, when only two fiscals are required. The report page should show all significant categories of operating income and expense. A supplementary schedule should be provided breaking down any category of other income or expense that equals or exceeds 25 percent of its respective total.

If possible, insurance commission income is to be shown net of premiums collected, and, when available, commissions should be broken down to show those directly related to credit extended within the bank holding company organization. The various income components from internal and external sources need to be detailed separately to allow cross checking with the ''Income from Subsidiaries'' pages.

Equity in undistributed earnings of subsidiaries should be listed below net operating income to derive ''net income.'' Where applicable, show separately the equity in undistributed earnings of subsidiary banks and nonbanks.

The examiner should make certain that—

- dividends, interest, management, and service fees and equity in undistributed earnings of subsidiaries equal the totals on the ''Income from Subsidiaries'' pages and
- net income equals the amounts reported on the ''Statement of Changes in Stockholders' Equity (Parent)'' and ''Comparative Statement of Income and Expense (Consolidated)'' pages. In those cases where the figures do not agree, the difference should should be footnoted and detail should be provided for the difference.

Classified assets, off-balance-sheet transactions, and other transfer-risk problems (OTRP) are summarized by organizational level, whether at the parent company, banking subsidiaries, or nonbank subsidiaries, and compared with valuation reserves established to absorb known and potential losses. For banking subsidiaries the classified items are derived from the most recent federal and state examinations for the individual bank subsidiaries.

Report the classification, reserve, noncurrent, and loan/lease-level ratios as detailed on the report page. The ratio of consolidated classified assets to tier 1 capital should be included. The "continued" page should contain comments regarding the sources of information and methods used by the examiner for determining consolidated asset quality.

For the parent company, the classification totals should be broken down into the major asset categories (e.g., "Loans," "Other Real Estate," and "Other Assets"). The lead bank subsidiary's classification should be broken out along with any other bank that has classified assets representing 20 percent or more of total consolidated classified assets. The assets of a nonbank credit-extending subsidiary should be broken out if the nonbank subsidiary had classifications greater than 5 percent of consolidated classified assets or other large problem credits or classified assets.

There may be occasions when one or more subsidiary banks may not have been subject to an asset-quality review by a bank supervisory agency within the last two years, which impedes the bank holding company examiner from making an accurate judgment on the company's asset quality. The examiner may accept the internal criticized assets of the bank holding company *only if* the internal system was tested by the examiner and deemed to be valid. Generally, such testings should be conducted as necessary in order to make an informed judgment on consolidated asset quality. Comments should be provided about whether the examiner was able to rely on information depicting asset quality or that such information was not available.

Classification totals of off-balance-sheet transactions, if any, should be broken out separately and summarized for each level of the organization (parent company, bank subsidiaries, and nonbank subsidiaries).

The source for reporting classified asset totals should be stated (FRB, OCC, FDIC, internal operations, or internal audit review) along with the respective as-of date. As an alternative, classified asset totals may be listed for individual bank and nonbank subsidiaries. The purpose of preparing this summary is to—

1. determine the amount and degree of risk and potential loss associated with on- and off-balance-sheet transactions and activities (This is accomplished by summarizing the amount of classified assets and losses and other potential losses that may result from on- and off-balance-sheet activities, including off-balance-sheet risk and transfer risk at the consolidated organizational level, as well as the general composition of such potential losses at the parent company, bank subsidiaries, or nonbank subsidiaries);
2. analyze ratio trends in consolidated asset quality for the current and previous two inspections;
3. determine the extent to which such classified assets and off-balance-sheet risk influence the overall financial condition of the consolidated organization;
4. determine the adequacy of reserves (The page alerts management about the need for increasing the valuation reserve accounts);
5. disclose problem assets and off-balance-sheet transactions requiring management's attention;
6. show in summary form all classifications and criticisms assigned by examiners in determining asset quality and the adequacy of respective reserves; and
7. aid in the identification of existing and potential problems in the banks that may have an overall effect on the bank holding company.

The information for the report page is derived from two other completed pages or workpapers, "Parent Company and Nonbank Assets Subject to Classification" and "Classified Assets and Capital Ratios of Subsidiary Banks." The information is obtained by determining the collectibility or forced-sale value of assets or potential losses that may arise from certain on- and off-balance-sheet transactions. For banks, the information is to be generated from bank examination reports that are available at the Reserve Bank. (The holding company may have copies of the open sections of the reports.)

Investments in and advances to bank and

nonbank credit-extending subsidiaries by the parent are not to be classified. The examiner may, however, classify the parent's investments in and advances to non-credit-extending nonbank subsidiaries. For additional information on classifying an investment to a non-credit-extending subsidiary, see section 4070.0.

The use of abbreviations for the subsidiaries within narrative comments, as presented on the "Scope and Abbreviations" core page 2, is permissible. The examiner may comment on and analyze lending policies, documentation, collection procedures, and past-due volume in the aggregate. Such comments should be consistent with comments contained in other report pages and workpapers.

The examiner should provide comments on the adequacy of the valuation reserves and any recommendations to management to provide for additional loan-loss provisions. The examiner should also recommend that management maintain a level of loan-loss reserves that is adequate to offset 100 percent of assets classified loss and still have a balance sufficient to absorb normal unidentified, unanticipated future losses from operations.

Weighted classified assets includes 100 percent of loss, 50 percent of doubtful, 20 percent of substandard, and, when applicable, value impaired (net of adjusted transfer-risk reserve). It is appropriate to comment on weighted classified assets on the "Analysis of Financial Factors" core page 3.

Noncurrent loans and leases refers to the end-of-period dollar amount of loans and lease-financing receivables past due 90 days or more and still accruing, plus those carried in nonaccrual status, as reported for each loan category. This report page should not be included in the core section of the report for one-bank holding companies. For those bank holding companies, the examiner will include the classifications on the "Parent Company and Nonbank Assets Subject to Classification" and the "Bank Subsidiaries" report pages when assets are classified or written up as required.

The examiner should make certain that the aggregate classifications and reserve amounts agree with those reported for the parent, the banking subsidiaries, and the nonbank subsidiaries on the "Parent Company and Nonbank Assets Subject to Classification" and the "Classified Assets and Capital Ratios of Subsidiary Banks" pages or workpapers. If classifications are discussed on the "Examiner's Comments and Matters Requiring Special Board Attention" page, the totals should be confirmed.

5010.10.1 CLASSIFICATION OF ASSETS

On May 7, 1979, the three federal banking agencies issued a joint statement announcing a "Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks." The statement includes definitions of the classification categories and specific information on classifying securities in bank examinations. The classification categories established are also applicable to classifying parent company and nonbank assets. Although the classification categories for bank and nonbank assets are the same, the classification standards generally are not applied to classifying a bank's nonbank assets due to the difference in risk characteristics of the assets. Despite the differences that may exist between bank and nonbank assets, the standards for classifying investment securities can be applied directly to securities held by the parent company. The statement revised bank examination procedures established in 1938 and revised July 15, 1949. Classification units are designated as substandard, doubtful, and loss.

5010.10.1.1 Substandard Assets

A substandard asset is inadequately protected by the current sound worth and paying capacity of the obligor or the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the bank will sustain some loss if the deficiencies are not corrected.

5010.10.1.1.1 Substandard Classification—Guidelines for an Asset When a Substantial Portion Has Been Charged Off

In some cases, credit-extending subsidiaries with loans to financially troubled borrowers have charged off substantial portions of these credits. Consistent with long-standing supervisory practice, the evaluation of each extension of credit should be based on the fundamentals of the particular credit. That is, the evaluation of each credit should be based on the borrower's (or the collateral's) current and stabilized cash flow, earning and debt-service capacity, financial performance, net worth, guarantees, and future prospects and on other factors relevant to the borrower's ability to service and retire its debt.

Based on consideration of all of the above relevant financial factors, this evaluation may indicate that a credit has well-defined weaknesses that jeopardize repayment in full but that a portion of the loan may be reasonably assured of repayment. When a charge-off has been taken in a sufficient amount so that the remaining recorded balance of the loan is being serviced (based on reliable sources of cash flow) and is reasonably assured of repayment, this remaining recorded balance would generally be classified no more severely than substandard.[1] Consistent with long-standing classification guidelines, a substandard classification of the remaining recorded balance would only be appropriate when well-defined weaknesses continue to be present in the credit. For example, when the remaining recorded balance of an asset is secured by readily marketable collateral, the portion that is secured by this collateral would generally not be classified. (See SR-91-18.)

This approach would generally be appropriate when an organization maintains sufficient controls over its lending function and maintains adequate current documentation to support the credit analysis of the loan. This classification approach could not be used for loans for which the loss exposure cannot be reasonably determined, e.g., loans collateralized by properties subject to environmental hazards. This approach would also not be justified when sources of repayment are considered unreliable.

5010.10.1.2 Doubtful Assets

An asset classified doubtful has all the weaknesses inherent in one classified substandard. However, it has the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable.

5010.10.1.3 Loss Assets

Assets classified loss are considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather that it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future. Fifty percent of the total of doubtful and all of loss will be deducted in computing the net sound capital of the bank. Amounts classified loss should be promptly charged off.

1. The accrual/nonaccrual status of the loan must continue to be determined in accordance with the glossary to the current call report or bank holding company reporting instructions. Thus, while these partially charged-off loans may qualify for nonaccrual treatment, cash-basis recognition of income will be appropriate when the criteria specified in the report guidance is met.

5010.10.2 APPRAISAL OF SECURITIES IN BANK EXAMINATIONS

Investment-quality securities are marketable obligations in which the investment characteristics are not distinctly or predominantly speculative. This group generally includes investment securities in the four highest rating grades and unrated securities of equivalent quality. Neither market appreciation nor depreciation in these securities will be taken into account in figuring net sound capital of the bank. This policy is intended to apply to recognized sound investment practices of banks and not to those situations in which the portfolio requires special treatment by a supervisory agency.

Sub-investment-quality securities are those in which the investment characteristics are distinctly or predominantly speculative. This group generally includes securities in grades below the four highest grades and unrated securities of equivalent quality, defaulted securities, and sub-investment-quality stocks.

Securities in grades below the four highest rating grades and unrated securities of equivalent value will be valued at market price (fair value) and the depreciation will be classified doubtful; remaining book value will be classified substandard. Depreciation in defaulted securities and sub-investment-quality stocks will generally be classified loss; remaining book value will be classified substandard.

An exception to the above will be made in the case of municipal general obligations that are backed by the credit and taxing power of the issuer. The entire book value of sub-investment-quality municipal general obligations, which are not in default, will be classified substandard. In the event of a default of a municipal general obligation, a period of time is usually necessary to permit the market for these defaulted securities to stabilize or for the issuer to put in place budgetary, tax, or other actions that may eliminate the default or otherwise improve the post-default value of the securities. The market for the defaulted securities will be periodically reviewed by the regulatory authorities. Upon a determination that a functioning market has been reestablished, depreciation on defaulted municipal general obligations will be classified as loss. During such interim, the book value of all defaulted municipal general obligation securities will be classified doubtful. (The above exceptions will not apply in those instances where the supervisory authorities determine that there is no likelihood that the municipality will be able ultimately to repay or satisfactorily restructure its obligations.)

5010.10.3 1979 REVISION TO THE 1938 ACCORD

Type of Security	Security Classifications		
	Substandard	Doubtful	Loss
Investment-quality	XXX	XXX	XXX
Sub-investment-quality, except	Market value (fair value)	Market depreciation	XXX
Sub-investment-quality, municipal general obligations	Book value	XXX	XXX
Defaulted securities and sub-investment-quality stocks, except	Market value (fair value)	XXX	Market depreciation
Defaulted municipal general obligations:			
Interim	XXX	Book value	XXX
Final, i.e., when market is reestablished	Market value (fair value)	XXX	Market depreciation

This Core report page is to present the consolidated balance sheet as of the financial statement date, the comparable date for the previous year, and the last two fiscal year-end statements. When the inspection is conducted at fiscal year-end, only two fiscal year-end statements need be presented. The comparative statement allows the reader to analyze any changes in asset, liability, and capital structure and to determine the condition of the consolidated organization on the specified dates.

The financial statements should be requested in the officer's questionnaire. Fiscal financial statements can also be obtained from the FR Y-6, FR Y-9, the SEC Form 10-K, and published reports to shareholders.

The balance sheets should be presented in columnar form with the current interim first, prior interim period, current fiscal and prior fiscal. They may be formatted like the FR Y-9.

In preparing the comparative balance sheet, the following should be done.

1. Gross loans should be shown and then netted of unearned discount and reserve for loan losses.

2. Federal funds sold and securities purchased under resale agreements may be shown as one amount or separately, depending on how the company prepares its statements. Similar treatment should be given to federal funds purchased and securities sold under repurchase agreements on the liability side.

3. Total deposits should be broken down or footnoted to show interest-bearing and noninterest-bearing deposits in domestic and foreign offices.

4. Mandatory convertible debt instruments should be shown separate from subordinated capital notes and debentures and detailed on the ''Liquidity and Debt Information'' Confidential Page ''C.''

5. Stockholder's equity should be detailed using the following categories, as applicable: common stock, perpetual preferred stock, capital surplus, retained earnings (undivided profits), and reserves for contingencies and other capital reserves.

The amount of total consolidated debt should agree with unaffiliated debt for the current period on the ''Liquidity and Debt Information'' Confidential page ''C.'' Any exceptions should be footnoted.

Equity capital should agree with the individual components shown on the ''Statement of Changes in Stockholders' Equity (Parent)'' page for the respective periods and with stockholders' equity on the ''Parent Company Comparative Balance Sheet'' Core page 5. Any exceptions should be footnoted.

Figures used in the analysis on the ''Analysis of Financial Factors'' Core page 3 and the ''Capital Structure (Consolidated)'' pages should agree with this statement.

This report page is to present a *consolidated* statement of income and expense as of the financial statement date, the comparable date for the previous year, and the last two fiscal year-end statements. When the inspection is conducted at fiscal year-end, only two fiscal year-end income and expense statements need be presented. The statement aids the reader in an analysis of corporate earnings performance on a consolidated basis and provides the ability to further analyze changes in income and expense accounts from one period to another.

Statements of income and expenses should be requested in the officer's questionnaire. Statements for fiscal periods can also be obtained from the FR Y-6, FR Y-9, the SEC Form 10-K and published reports to stockholders.

The statement of income and expenses should be presented in columnar form with the current interim first, prior interim period, current fiscal, and prior fiscal. They may be formatted like the FR Y-9.

Any detail available that breaks down ''interest income'' for the most recent fiscal year into components should be presented either on the statement as a footnote or on a supplemental page, the ''Comparative Statement of Income and Expenses (Consolidated)'' page, if considered appropriate by the examiner.

Provisions for loan losses should be shown as a line item and not grouped in ''other expenses.'' ''Other income'' and ''other expenses'' should be broken down to provide additional detail at the discretion of the examiner.

Net income should normally agree with net income of the parent on the ''Comparative Statement of Income and Expenses (Parent)'' page and the ''Statement of Changes in Stockholders' Equity (Parent)'' page. Footnote differences.

The risk-based capital guidelines apply on a consolidated basis to bank holding companies with consolidated assets of $150 million or more. For these BHCs, the designated FR 1225 report page will be used. For BHCs with consolidated assets of less than $150 million, the risk-based capital guidelines apply on a bank-only basis unless (a) the parent holding company is engaged in nonbank activity involving significant leverage (e.g. engaged in significant off-balance sheet activity); or (b) the parent company has a significant amount of outstanding debt that is held by the general public. For BHC with total assets of less than $150 million the Capital Structure (FR 1241) report page is used.

5010.13.1 BHCS WITH CONSOLIDATED ASSETS OF $150 MILLION OR MORE—[CORE PAGE 10—CONSOLIDATED CAPITAL STRUCTURE (FR 1225)]

The consolidated capital structure report page summarizes the various components of the BHC risk-based capital ratios. Two report pages are provided to allow for risk-based capital computations during transition and at year-end 1992 for final implementation. The pages provide the various limitations for the respective components of Tier 1 and Tier 2 capital. For both report pages, the first page summarizes ‘‘Total Qualifying Capital’’ comprised of Tier 1 and Tier 2 capital, adjusted for investments in unconsolidated financing subsidiaries and reciprocal holdings of capital.

Tier 1 capital consists of permanent core capital elements (common equity, noncumulative perpetual preferred stock, a limited amount of cumulative perpetual preferred stock, and minority interest in the equity of consolidated subsidiaries). Tier 1 capital is derived by subtracting goodwill from the sum of Tier 1 capital elements.

Tier 2 capital consists of: (a) a limited amount of the allowance for loan and lease losses; (b) auction rate perpetual preferred stock plus any cumulative perpetual preferred stock exceeding its Tier 1 limitation; (c) perpetual debt, mandatory convertible securities, and other hybrid capital instruments; (d) long-term perpetual preferred stock; and (e) limited amounts of term subordinated debt, intermediate-term preferred stock, and unsecured long-term debt issued prior to March 12, 1988.

For Tier 2 capital, the amount of mandatory convertible securities that have the proceeds of common or perpetual preferred stock dedicated to retire or redeem them should be treated as term subordinated debt subject to the established limit of 50 percent of Tier 1 capital. Mandatory convertible securities, net of the perpetual preferred or common stock dedicated to redeem or retire the issues, are included within Tier 2 on an unlimited basis. Tier 2 capital may not exceed Tier 1 capital.

Investments in unconsolidated financial subsidiaries and reciprocal holdings of capital are subtracted from the combined total of Tier 1 and Tier 2 capital to determine the amount of total qualifying capital.

Core page 10–1 provides a summary of risk weighted on- and off-balance sheet assets, adjusted (reduced) for the excess of the allowance for loan and lease losses not included in Tier 2 capital and the allocated transfer risk reserve (ATRR). In addition, it provides a comparative peer and historical summary of risk-based capital ratios, growth rates, and dividend payout ratios.

Core page 10–2 provides a summary comments section to discuss any pertinent aspects of the institution’s capital structure not evident from the schedule.

The information on the capital structure page will give support to the examiner’s evaluation of the bank holding company’s capital adequacy. The most convenient method to obtain the information is to request it in the officer’s questionnaire, or through direct contact with the accounting department.

The amounts on the risk-based capital schedules should be shown as of the same date as the ‘‘Consolidated Comparative Balance Sheet’’ of the inspection report. Refer to the Risk-based Capital Guidelines in Appendix A of Regulation Y and Manual sections 4060.3 and 4060.4 for a discussion of the Capital Adequacy Guidelines and the minimum risk-based capital and leverage ratios for BHCs.

Use the instructions and guidance found on the report page and worksheets. When completing the supplementary capital section, insert the aggregate amount of each component in the space provided. If more than one issue of a particular Tier 2 capital component is outstanding, a range of rates should be shown in the appropriate space, giving the lowest and the highest rates paid.

Comments under the Risk-based Capital schedule should include:

- Any unusual terms and conditions relating to issues of supplementary capital that the examiner feels should be mentioned;
- An indication of whether a subsidiary bank's equity represents the proceeds from the issuance of parent debt (double leverage);
- A presentation or description of risk-based capital components for statutory purposes if there is a violation for which the statutory definition is relevant.
- A situation whereby the levels of risk warrant significantly higher risk-based capital ratios than the minimums.

The amounts of Tier 1 and Tier 2 used in this analysis of consolidated risk-based capital on the ''Analysis of Financial Factors'' page should be consistent with the amounts on this page.

5010.13.2 WORKSHEETS

In addition to the report pages, BHC Risk-Based Capital Calculation Worksheets have been developed for examiner use with year-end 1992 final implementation. The worksheets are to be retained with the examiner's workpapers. If the bhc generated data was validated by the examiner and accepted to support or partially substitute for the computation of the elements, it should also be retained with the worksheets. The worksheets provide more detail as to the composition of core capital elements and supplementary capital elements. In addition, the footnotes provide more detailed explanations of the various components than are found on the actual report pages.

5010.13.3 BHCS WITH LESS THAN $150 MILLION IN CONSOLIDATED ASSETS—[PAGE—CAPITAL STRUCTURE (LEAD BANK OR OTHER BANK SUBSIDIARY (FR 1241)]

The FR 1241 report page is used primarily for the lead bank. Report pages have been developed for year-end 1992 final implementation. The report pages are nearly identical to those used for state member bank examinations (FR 1460). If there is no one lead bank, the report pages should be prepared for each comparable lead bank.

This report page provides a summary of the policies formulated by the board of directors by which active management supervises holding company operations. The objective is to determine whether there are adequate formal policies developed and supervised, either directly through the board of directors, or by a delegation of the authority, for the parent company and its subsidiaries. Another objective is to evaluate management's performance in carrying out those policies for the entire organization. These policies aid in giving insight into the operations of the holding company. The policies should ensure that all statutory and regulatory requirements are met and that proper controls (management information systems) are in place to minimize risk. Examiners should encourage BHCs to develop formal written policies on all items presented.

The report page is to provide an analysis of the adequacy of supervision exercised by the holding company over its subsidiaries, and policies concerning intercompany relationships. Also included is a discussion of deficiencies in the policy-making process, any noncompliance with existing policies, and the plans for correcting any deficiencies.

In the officer's questionnaire, the examiner may request some of the information pertaining to policies. Insight into policies may also be gained by reviewing the holding company's annual reports to stockholders and through discussions with management. If the holding company does not have any formal written policies, the organization's operating procedures should be discussed with officers responsible for the various areas.

Compliance with policies may be determined by reviewing recent internal and external audit reports, recent bank examinations, and discussions with management at the subsidiary level, and by conducting tests to determine the extent of compliance with policies. Discussions with management are necessary to obtain a thorough understanding of management and supervisory practices, policy-development techniques, the degree to which management information is utilized to monitor subsidiaries, and overall management philosophy.

The policies should be summarized as succinctly as possible in narrative form. If the holding company has no formal policies the examiner may use an introductory statement indicating that comments were derived from discussions with senior management. Absence of any formal policies may require the examiner to make a recommendation on the "Examiner's Comments" Core page 1 that the holding company strongly consider the establishment of formal written policies in order to supervise its subsidiaries more effectively.

This report page should address existing policies and the level of control and supervision exercised over subsidiaries. How effectively policies are carried out should be shown in the respective sections of the report. Where policies result in violations of law or regulation, comments should be made on the "Examiner's Comments" Core page 1 and detailed on the "Violations" page. If any policy is considered inconsistent with safe and sound banking practices, the matter should be presented on Core page 1 and detailed elsewhere in the report.

Comments on policies that are on other pages in the report should be consistent with this report page. Those comments and report pages are:

1. Dividends and fees from subsidiaries—on the "Statement of Changes in Stockholder's Equity," "Income from Subsidiaries," and the "Cash Flow Statement (Parent)" pages.
2. Dividends paid to shareholders—on the "Statement of Changes in Stockholder's Equity," and the "Cash Flow Statement (Parent)."
3. Budgeting and tax planning—on the "Other Supervisory Issues" page.
4. Internal audit—on the "Audit Program" page.
5. Insider transactions—on the "Extensions of Credit to BHC Officials" page.

5010.14.1 QUESTIONS TO BE ADDRESSED ON THE POLICIES AND SUPERVISION REPORT PAGE

5010.14.1.1 Level of Control and Supervision Exercised over Subsidiaries

1. Do subsidiaries operate autonomously? What is the degree of overlap between BHC and bank management?
2. Who sets major policies of the corporation?
3. How does the holding company monitor the operations of its subsidiaries (reports, directors, etc.)?
4. Are the subsidiaries involved in formulating the holding company's budget and tax plan-

ning? How is the holding company's budget developed and at what corporate level is income tax planning coordinated?

5. Describe the intermediate and long-term strategic planning process and whether the subsidiaries are integrated into a consolidated planning process. Does the consolidated plan include the minimum elements discussed in section 2010.4 of this manual? Is the plan effective and is it consistently applied?

6. How is the internal audit of subsidiaries performed?

- Does an audit team audit each subsidiary on a periodic basis?
- What is the frequency of the audit cycle?
- To whom does the audit department report?
- Is there an audit committee of directors?

7. Is the control and supervision of subsidiaries deficient?

5010.14.1.2 Loans and Investments of Subsidiaries (See sections 2010.2 and 2010.3.)

1. Does the parent company's policies address the minimum elements of a lending policy as listed and described in section 2010.2 of this manual?

2. Does each subsidiary have its own loan policy or does the holding company establish policy for all subsidiaries? Are lending policies considered adequate and is there general compliance?

3. Does each subsidiary handle its own investment portfolio or are investments managed at the holding company level? Are investment policies adequate and is there general compliance? Are investment-authorization procedures adequately detailed to prevent circumvention of investment-policy directives?

4. Does the holding company have a credit review team or is credit review handled by each subsidiary?

5. Does the BHC have a policy establishing limits on consolidated concentrations of credit?

5010.14.1.3 Funds Management and the Adequacy of Existing Policies (See section 2010.1.)

1. Does the parent-company management have policies in place to prevent funding practices that put at risk the welfare of the subsidiary banks or the consolidated organization?

2. Does the parent company maintain for itself and its subsidiaries policies that provide guidance and controls for funding practices?

3. To what extent do the subsidiaries follow the funding policies and how effective are they in reducing risk to the entire organization?

4. At a minimum, do the parent company's funding policies address:

a. Capitalization levels for bank subsidiaries, the nonbank subsidiaries, and the consolidated organization as to whether the policy for:

- Bank and consolidated capital are consistent with the Board's capital adequacy guidelines;
- Nonbank capital includes maintaining the capital level at industry standards;
- The holding company specifies the desired range of capital for each entity, and the measures that should be taken in the event that capital falls below that level;
- The parent company specifies the degree of double leverage that it is willing to accept;
- Each entity specifies the method for calculating dividends?

b. Asset/liability management including interest rate sensitivity matching, maturity matching, and the use of interest rate futures and forwards and other financial derivative instruments?

c. How nonbank subsidiaries fund their activities?

5010.14.1.4 Loan Participations Among Subsidiaries (See sections 2010.2 and 2020.2.)

1. Under what circumstances are loans participated?

2. Who determines the type of loans that may be participated? Does the BHC have policies in that regard? Are credit standards included in the lending policy for purchased loan participations and does the policy require complete loan documentation.

3. Does the lending policy place limits on the amount of loans purchased from any one source and does it place an aggregate limit on such loans?

4. Are low-quality loans allowed to be participated?

5010.14.1.5 Dividends and Fees From Subsidiaries

1. What is the policy for assessing dividends from subsidiaries?
2. Does the policy take into account statutory and regulatory restrictions on bank dividends as well as subsidiary asset quality, earnings, the ability to service debt and growth prospects?
3. What is the policy for determining fees charged to subsidiaries in relation to management and other services rendered?
4. Are service fee arrangements supported by contracts and are the subsidiaries actually receiving the services?
5. Are the fees charged to subsidiaries reasonable and justifiable in relation to the fair market value of the services provided? If no market exists for the services provided, are fees based on their cost plus a reasonable profit? Has the BHC directly or indirectly through other subsidiaries burdened its banking subsidiaries with excessive fees or unreimbursed charges to fund its debt service, dividend payments or support of other subsidiaries?

5010.14.1.6 Risk Evaluation and Control

1. Has the bank holding company formalized policies and procedures in identifying, evaluating, and controlling risk?
2. What has management done to limit its risk exposure in relationship to the amount of the organization's capital, or earnings?
3. Do audit procedures include a determination as to whether management's risk evaluation and control procedures are being followed as prescribed?
4. Has the bank holding company taken steps to identify and control its exposure to losses resulting from contingent liabilities and off-balance sheet activities such as standby letters of credit, interest rate swaps, foreign exchange contracts, currency swaps, options, securities lending and borrowing, insider transactions, and commitments to lend?

5010.14.1.7 Management Information Systems

1. How effective and timely are the parent company's policies and procedures with respect to its management information systems as to:
    - Audit
    - Budget
    - Reporting
    - Insurance
2. Does the board of directors receive sufficient information about key areas of its operations?

5010.14.1.8 Internal Loan Review

1. Is an internal loan review program in existence for bank and/or nonbank subsidiaries? If no program exists, does the size and complexity of the organization warrant implementation of a formal process?
2. Will the internal loan review procedures adequately identify deteriorations in credits, loans that do not comply with written loan policies and loans with technical exceptions in a timely manner?
3. Is the loan review function independent of the loan approval function, with written findings reported to a board committee or senior management committee not directly involved in lending?
4. Are the quality and size of the internal loan review staff sufficient in relation to the organization's size and complexity?
5. Are the scope and frequency of the loan review procedures adequate?

5010.14.2 DISCUSSION AND APPRAISAL OF OTHER PARENT COMPANY POLICIES

Another parent company policy that should be discussed and appraised, in addition to those listed on the ''Policies and Supervision'' page is the Consolidated Planning Process whereby the subsidiaries are integrated into a consolidated plan. See Manual section 2010.4.

This report page is used to present information on all violations discussed in the inspection report. The objective of the report page is to bring violations to the attention of the board of directors for corrective action and to alert the supervisory agencies to the need for supervisory attention.

The information reported should center on violations by the holding company uncovered during the course of the inspection and those that are discovered through a review of reports filed with supervisory authorities. Information on violations by the subsidiary bank(s) in its dealings with the holding company or affiliates may be obtained from the most recent bank examination reports or uncovered during the holding company inspection.

This page should include all BHC and nonbank subsidiary violations of the Act, Regulation Y, Section 23A and 23B violations of the Federal Reserve Act, and other applicable statutes and regulations. A complete write-up is necessary if the violation is not detailed on another page (including the date of the violation or transaction, a description of the transaction or act, the reason for the violation, the amount of the transaction, and the amount of any potential or actual loss). When the information is presented elsewhere, a brief summary and a reference to that page is sufficient.

Violations of the holding company should be presented first, followed by the nonbank subsidiaries and then bank subsidiaries. Bank violations not involving the holding company or nonbank subsidiaries should not be detailed here.

If violations of sections 23A and 23B of the Federal Reserve Act (transactions with holding company affiliates) are disclosed in a subsidiary bank's examination report or during the inspection of the holding company, comments should be limited to a brief summary on the ''Violations'' page with a reference to the intercompany transaction(s) on the ''Other Supervisory Issues'' page. This latter page will contain additional detail on the violation. (Note: only bank subsidiaries can be cited for the violations of sections 23A and 23B of the Federal Reserve Act although the violation may have resulted from holding company actions). The examiner may also criticize management on the ''Examiner's Comments'' Core page 1 of the inspection report for causing the bank to be in violation of sections 23A and 23B provisions.

Apparent violations should be presented on the ''Other Matters'' page, and may be presented on the ''Examiner's Comments'' page if considered appropriate by the examiner. Violations will be reviewed on a case by case basis for possible follow-up administrative action(s).

Violations must be presented in brief on the ''Examiner's Comments'' page referring the reader elsewhere for detail. The examiner should ensure that information contained on these related pages is consistent.

This page presents nonconfidential information or issues which would not be suitable for presentation on any other page in the report. BHC plans may be discussed here in order to anticipate any regulatory or supervisory considerations. *Apparent* violations are also presented here and may be referred to on ''Examiner's Comments'' page or on other report pages at the examiner's discretion. BHC plans for future activities may be presented.

The information might be derived from minutes of the corporation and/or subsidiaries, discussions with management, and examiner observations during the inspection.

Other information that may be summarized can include:

1. Corporate plans (debt or equity issues, acquisitions, sale of assets). Be certain management has no objection to the reference to these plans. Otherwise, present such information on page C;
2. Any unfunded pension liabilities;
3. Overall condition of corporate records; and
4. Any other comments deemed appropriate by the examiner and not noted elsewhere in the report.

Any reference that involves dollar amounts, ratios, or other information contained in schedules or comments elsewhere in the report should be cross-checked.

Procedures for Inspection Report Preparation (Page—Classified Assets and Capital Ratios of Subsidiary Banks) Section 5010.17

This report page provides a summary of asset classifications and capital ratios as of the most recent federal and state examinations for the individual bank subsidiaries. The objective of the page is to aid in the identification of existing or potential problems in the banks which may have an overall effect on the holding company.

The information is to be derived from bank examination reports which are available at the Reserve Bank. (The holding company may have copies of the open sections of the reports.)

The banks are to be listed in the same order as they appear on the Organization Chart or Investments in and Advances to Subsidiaries report pages. Total assets or total average assets should be shown as presented in the examination report. Do not adjust total assets by adding back valuation reserves.

For bank holding companies, tier 1 capital includes common equity and qualifying cumulative and noncumulative perpetual preferred stock, less goodwill and other designated intangible assets. Common stockholders equity includes common stock; related surplus; and retained earnings, including capital reserves and adjustments for the cumulative effect of foreign-currency translation, net of any treasury stock, less net unrealized holding losses on available-for-sale equity securities with readily determinable fair values.

Qualifying cumulative perpetual preferred stock is limited within tier 1 to 25 percent of the common stockholders equity and minority interest. Total capital includes tier 1 plus tier 2 capital.

Weighted classified assets includes 100 percent of loss, 50 percent of doubtful, and 20 percent of substandard and value-impaired (when applicable), net of allocated transfer risk reserves (ATRR).[1] It is appropriate to comment on weighted classified assets on the Analysis of Financial Factors page.

When determining supervisory asset-quality ratings (the [A]sset rating in ‘‘CAMELS’’) for the BHC’s subsidiary banks, an asset-quality ratio is used based on a comparison of weighted classified assets to tier 1 capital (as defined for leverage purposes) plus the allowance for loan and lease losses. Examiners should use this ratio and the accompanying benchmarks in conjunction with all the other factors normally evaluated when assessing asset quality for each institution.

The allowance for loan and lease losses is defined as the bank’s total ALLL. The ALLL is *not* subject to the 1.25 percent limitation on supplementary capital elements for this calculation (that is, all of the ALLL is included in the denominator of the ratio).

The ratio of these assets to tier 1 capital plus the allowance for loan and lease losses is then compared to the existing asset-quality benchmark table to determine the asset-quality rating.

Asset-Quality Table

Asset-Rating Ranges	*Asset-Quality Ratio*
1	under 5%
2	5% to 15%
3	15% to 30%
4	30% to 50%
5	over 50%

Examiners should use the asset-quality table and other pertinent factors, including loan policies, credit administration, portfolio concentrations, and past-due levels, to determine the final asset-quality rating. While individual bank ratios may change slightly, depending on the amount of cumulative preferred stock, mandatory convertible debt, and other supplementary elements, the change in the ratio itself should not result in a change in the bank’s asset-quality rating.

This page should not be prepared for one-bank holding companies. The examiner may show this data on the Bank Subsidiaries page. However, the examiner may use this page to reflect successive examination data for several years to indicate trends. The examination dates should be cross-checked to those shown on the Bank Subsidiaries page.

1. See SR-92-2 regarding the treatment of value-impaired classifications for asset-quality purposes.

Procedures for Inspection Report Preparation (Page—Organization Chart) Section 5010.18

This report page presents an organization chart, giving a schematic description of the structure of the organization, the intercompany relationships and the degree of control of subsidiaries.

An organization chart provided by the holding company for various regulatory filings may be used, with revisions made for new or divested subsidiaries. The information required below may simply be added to the existing chart.

The organization chart may be pictorial (box format) or linear (listing format). The parent should be presented at the head of the page. Banks should be presented individually in the same area. Nonbanks should be presented individually in the same area (if possible).

Each subsidiary should be shown by its official name; however, there is no need to indicate the address unless necessary to distinguish identity. Subsidiaries of banks and second tier nonbank subsidiaries may be omitted or shown at the examiner's discretion. Abbreviated charts should be so footnoted.

Abbreviations used throughout the report should be presented on the ''Structure and Abbreviations'' Report page and also on the bottom of this page or following the chart. Generally, abbreviations familiar to the BHC should be used. However, efforts should be made to incorporate at least a part of the name into the abbreviation as opposed to relying strictly on initials which tend to become confusing. Also, it is desirable that abbreviations of bank subsidiaries include the word ''Bank'' to distinguish them from the parent company and/or nonbank subsidiaries with similar names.

Indicate the percentage of ownership to the nearest tenth of one percent and include directors' qualifying shares. Where all, or nearly all of the subsidiaries are wholly-owned, detail the exceptions and provide a footnote to the effect that unless shown, ownership is 100 percent.

The names and/or abbreviations shown on the organization chart are to be consistently used throughout the report (for example, the ''Income from Subsidiaries,'' ''Investment in and Advances to Subsidiaries,'' and the ''Nonbank Subsidiary'' and the ''Bank Subsidiary'' pages).

Where applicable, the order established on this page should be used in all tables of the report.

The report page provides an abbreviated history of the organization including name changes, acquisitions, mergers, reorganizations and divestitures. The objective is:

1. To present the chronological development of the bank holding company.
2. To list nonbank activities engaged in by the parent company and its subsidiaries.
3. To provide a measure of size relative to competing institutions.

The information that is included in this report page may be obtained from documents filed with the Federal Reserve System. For lines 1 through 3, refer to reports filed with the FRB such as the registration statement and FR Y–6. In response to item 3, one bank holding companies formed before December 31, 1970, first became subject to the Act on December 31, 1970, with the passage of the 1970 Amendments to the Act. A multibank company formed between 1956 and December 31, 1970, became subject to the Act on the date of controlling its second subsidiary bank. All BHCs formed after December 31, 1970, became subject to the Act on the date of controlling their first bank subsidiary. For response to item 4, history is available in applications to FRB and in public documents such as annual reports to stockholders and SEC Form 10-K. For additional information contact the corporate secretary.

Comments responding to item 4 are to be in narrative and/or list form and should include:

1. The present number of banking subsidiaries, the percent of State deposits on an aggregate basis and size ranking in the State. For a money-center holding company, also provide its ranking on a national basis.
2. The date and outline of any acquisitions, mergers, reorganizations, or name changes.
3. A list and brief description of activities in which the nonbanking subsidiaries are engaged.
4. A discussion of any permanent or limited grandfather rights, and any plans for divestment of shares or termination of nonbank activities.

The activities shown on this page should be consistent with those shown on the nonbank subsidiary pages.

5010.20.1 INVESTMENT IN AND ADVANCES TO SUBSIDIARIES

This schedule details the parent's financial relationships with its subsidiaries. It will be used to support comments or analyses in other sections of the report, or to clarify answers to the questions on the continued page, ''Investment In etc.—continued.''

The objectives of the report page are:

1. To determine the percent of the parent's assets comprised of investments in and advances to each subsidiary.
2. To help determine the dependency of subsidiaries on advances from parent.

The parent's investments in and advances to each subsidiary are usually detailed in ledgers maintained by the accounting department. Each subsidiary is listed individually beginning with banks, providing subtotals for banks and nonbanking subsidiaries.

The investment in each subsidiary is to include any related unamortized goodwill. Provide a ''total'' in the ''investment'' column. From this total subtract the aggregate unamortized goodwill in all subsidiaries and detail the ''goodwill'' on the ''Contingent Liabilities'' page.

Totals for investments and advances should agree with the ''Comparative Balance Sheet'' page. The Parent's investment should be equal to its proportionate interest in each subsidiary's equity as presented in financial statements on the ''Nonbank Subsidiary Financial Statement and Condition'' and the ''Bank Subsidiaries'' pages plus any unamortized goodwill. Parent's advances should also equal ''loans from parent'' as detailed on the ''Nonbank Subsidiary Financial Statement and Condition'' and the ''Bank Subsidiaries'' pages.

5010.20.2 INVESTMENT IN AND ADVANCES TO SUBSIDIARIES (continued)

For this continuation page, the answers to questions 1 through 6 provide information on the funding of subsidiaries.

The objectives of each question are as follows:

Question 1—To determine the amount of goodwill in the investment in each subsidiary.

Question 2—To determine if the parent ''forgave'' the indebtedness of any of its subsidiaries which might indicate an inability to service its debt properly or other financial difficulties in the subsidiary.

Question 3—To determine the extent of the parent's borrowings invested as equity since the last inspection. The subsidiary's enlarged capital base might provide additional debt capacity.

Question 4—To determine if the advances are on a preferential rate basis, to help in analyzing the subsidiary's earnings proficiency.

Question 5—To determine if there is any difficulty in the subsidiary regarding its ability to service its debt properly.

Question 6—To determine if the parent lends its credit and debt capacity to its subsidiary and to aid in the analysis of the parent's contingent liabilities.

The answers to all questions should be verified against company records and discussed with the comptroller, the treasurer or the finance officer. Details on some questions can come from company's latest SEC Form 10-K or the annual report to stockholders. All questions should be answered; if not applicable, so state. It is not necessary to repeat the question when answering.

Any guarantees should also be included as contingent liabilities.

Commercial paper is a source of funds for the parent and its subsidiaries. This schedule presents the maturity and placement of commercial paper in use in the parent's operations and/or for back-up to the commercial paper. The page is required if the parent issues commercial paper.

The objectives of this report page are:

1. To summarize the extent of the parent's use of commercial paper and its ability to continue the use of this funding tool.
2. To help determine the overall liquidity position of the parent company.
3. To determine the volatility of commercial paper issued, including average turnover rate.
4. To determine whether any subsidiary bank is providing compensating balances for the benefit of the parent or nonbank affiliate.

The information required in the schedule should be requested in the officer's questionnaire or can be obtained from the accounting or treasurer's departments and verified with the general ledger. If at all possible, the data should be as of the financial statement date. (An alternate date is acceptable for the Maturity Schedule but should be specified.) The schedule should also be prepared for each nonbanking subsidiary which issues its own commercial paper.

The total commercial paper should equal amounts on ''Parent Company Comparative Balance Sheet'' (Core Page 5) and the confidential ''Liquidity and Debt Information'' page C, unless an alternate date is used.

Lines of credit are a source of funds for the parent and its subsidiaries. This schedule presents the lines of credit available for the parent's operations and/or for back-up to commercial paper.

The purpose of the report page is to be able to determine the degree of use of the lines of credit and the availability of these lines to back-up commercial paper borrowings. It is also intended to help determine the overall liquidity position of the parent company.

The information required in the schedule should be requested in the officer's questionnaire or can be obtained from the accounting or treasurer's departments and verified with the general ledger. If at all possible, the data should be as of the financial statement date.

The exact names and locations of line banks should be shown in the ''Lines of Credit'' section and totals calculated for the dollar amount columns. If a BHC has an extensive number of line banks, the detail for each line of credit may be eliminated at the discretion of the examiner with aggregate amounts and ranges included in the appropriate columns. In this instance, the total number of line banks involved and a general comment as to geographic distribution should be included.

If any subsidiary bank maintains compensating balances on behalf of the parent, the examiner should place an asterisk in the column and determine that the bank is compensated so that it does not incur a loss of income. Any resulting loss of income should be commented upon. See Manual sections 2020.4 and 2080.1.

The total lines of credit in use should equal amounts reported on ''Parent Company Comparative Balance Sheet'' (Core page 5) and the confidential ''Liquidity and Debt Information'' page C.

The answers to questions 1 through 13 should provide information about the quality of the commercial paper and the procedures for its issuance. They should also discuss funding involving the issuance of commercial paper backed by lines of credit. Examiners should refer to sections 2080.05 and 2080.1 before completing this report page.

The purpose of the report page is—

1. to determine the quality of commercial paper and to appraise the company's ability to raise additional funds in the marketplace;
2. to determine how the proceeds from commercial paper sales will be used;
3. to decide whether the use of commercial paper is in keeping with statutory requirements and regulatory requirements such as those of the Securities and Exchange Commission (SEC);
4. to determine whether the use of commercial paper satisfies liquidity needs (see section 2080.1);
5. to determine if policies in the commercial-paper funding system are safe and sound;
6. to determine if backup sources of funds are available and adequate to meet the liquidity needs of the parent; and
7. to address the examiner's concerns about commercial paper policies, controls, and marketing methods.

The information needed to complete this report page is usually available from the holding company's investment or funds-management department. It may also be obtained through discussions held with management responsible for the holding company's funding program. The information may also be available from rating agencies and in contractual agreements with lending banks.

Question 1 asks for any changes in the commercial paper rating that may show a changing financial condition. See appendix A of this section, which lists rating indicators used by commercial paper rating companies. Determine the cause for any change in the rating.

Bank holding companies with lower credit ratings may issue commercial paper by obtaining credit enhancements. Such credit support may be obtained from letters of credit (LOC paper) or a surety bond issued by an insurance company having a high credit rating (called credit-supported commercial paper). Bank holding company commercial paper with a lower credit rating can also be backed by other high-quality assets serving as collateral (called asset-backed commercial paper), thus allowing the bank holding company to enter the market as an issuer. (See section 2128.03 for inspection guidance about such commercial paper enhancements.)

Question 1 further instructs the examiner to report the range of current rates paid on all commercial paper. By presenting the range of current rates paid on different maturities of commercial paper, the examiner can compare rates paid with those of the bank holding company's peers. This will aid in determining the "marketplace's" impression of the company's condition, as reflected by the rates the company must pay to attract funds.

The yields on commercial paper track those of other money market instruments. Like U.S. Treasury bills, a commercial paper instrument is a discount instrument. Because of exposure to credit risk, the yields on commercial paper are usually higher than those of U.S. Treasury bills. As in the case of Treasury bills, interest on commercial paper is computed on a 360-day year. Treasury bills, in contrast to commercial paper, are exempt from state and local taxes and are more liquid than commercial paper.

When responding to question 2, if any subsidiary sells commercial paper for its own use or for the parent, indicate why the bank holding company chooses to structure its funding in this way. For example, a commercial finance nonbank subsidiary of a bank holding company was authorized by the Board to underwrite (purchase) and deal in (resell or place with institutional investors) commercial paper as agent for the issuers (see section 3600.21.1). A section 20 subsidiary also can underwrite and deal in, or act as riskless principal in the placement of, commercial paper, if authorized by the Board by order.

A parent company could issue commercial paper directly or through a broker. The examiner therefore needs to be aware of the difference between direct paper and dealer paper. Direct paper is sold by the issuing firm directly to investors without using a securities dealer or an intermediary. Direct-paper issuers generally require continuous funds and therefore find it more cost-effective to establish their own sales force to sell their commercial paper directly to investors. In the case of *dealer-placed commer-*

cial paper, the issuer uses the services of a securities firm to sell its commercial paper.

If the subsidiary's name is similar to the parent's, note whether an investor can tell, by its name or through other means, that the issue is associated with the parent.

With regard to question 3, the commercial paper specimen should clearly state that it *is not* an FDIC-insured obligation of any bank subsidiary. (See section 2080.1.)

The minimum round lot in commercial paper transactions is usually $100,000, although some issuers sell commercial paper in denominations as low as $25,000. With regard to question 4, bank holding companies generally should not sell commercial paper in denominations of less than $25,000. This is to ensure that the commercial paper instrument is suitable for investment by sophisticated investors as opposed to the general public. Commercial paper investors are typically institutional investors.

Rollover of commercial paper proceeds on maturity is common. The SEC has stated that obligations that are payable on demand or have provisions for automatic rollover do not satisfy the nine-month (270 days) maturity standard. SEC staff, however, has issued no-action letters for commercial paper master-note agreements.[1] These agreements allow eligible investors to make daily purchases and withdrawals (subject to a $25,000 minimum) as long as the maturity of the note and each investor's interest therein do not exceed nine months. Such master-note agreements may allow prepayment by the issuer any time, or upon demand of the investor.

Commercial paper and commercial paper master-note agreements can result in a potential source of funding mismatch from the use of what is commonly called "deposit sweeps." This practice is based upon an agreement with a subsidiary bank's deposit customers (typically corporate accounts). Such agreements allow these customers to reinvest amounts in their deposit accounts above a designated level in overnight obligations of the parent bank holding company.

In view of the extremely short-term maturity of these sweep arrangements, banking organizations should be advised to exercise great care when investing the proceeds. Appropriate uses of the proceeds of such deposit-sweep arrangements are limited to short-term bank obligations, short-term U.S. government securities, or other highly liquid, readily marketable, investment-grade assets that can be disposed of with minimal loss of principal. (See also sections 2080.05 and 2080.1 when reviewing commercial paper activities.)

Concerning question 5, investing in the bank holding company's commercial paper by a subsidiary bank's trust department is generally regarded as self-dealing and a violation of trust regulations, absent express written authority and the consent of all of the trust's beneficiaries. Bank holding company examiners finding such trust department holdings should discuss the matter in detail with Reserve Bank trust examiners or the Board's Trust Activities Section, Division of Banking Supervision and Regulation.

In response to question 6, the examiner should indicate the use of the proceeds and whether such use is considered long-term or short-term. (See also sections 2080.05 and 2080.1.)

Question 7, on concentration of holdings, is intended to aid in determining if any party can exert influence on the bank holding company due to its commercial paper holdings. If any individual, organization, or industry holds more than 10 percent of the commercial paper, indicate if the holder(s) exerts any influence on the bank holding company's management.

In response to question 8, if there is any indication of difficulty in refinancing commercial paper at maturity, discuss this in significant detail. Indicate the reasons for the difficulty, the problems it poses for management, and management's plans to rectify those problems. This is a particularly sensitive issue because of the financial exposure that could be created by an inability to refinance.

1. A master note is a negotiated agreement or contract (negotiated as to size, maturity, and price) between a borrower and investor that permits the investor to place cash, up to a stated amount, with the borrower over a designated period of time. Such unsecured credit agreements (no note is actually issued, only an agreement is signed at the beginning of the arrangement) are limited to borrowers with the highest credit ratings and large investment institutions.

Master notes have characteristics similar to those of a revolving-credit arrangement. The outstanding amount allowed may vary daily but is limited by a stated cap imposed by the issuer. Investors in such agreements control the amount invested in the note on the basis of the amount of surplus cash that is on hand. Either party can terminate the agreement with only 24 hours' notice. In reality, it is a longer-term funding vehicle because the parties generally are interested in maintaining a long-term relationship.

Unlike commercial paper, master notes are indirectly accessible to a wider array of investors. Investment firms group investments from small investors with investments made by a few large institutional investors and place the funds in master notes. The master note, unlike commercial paper, avoids the task of writing daily individual tickets for each customer. Disadvantages of the master note are the potential for daily variation in the amount invested and the potential for sudden redemption.

Question 9 is intended to aid in determining the degree to which the bank holding company can rely on its line banks. Lines that have not been confirmed in writing or for which no contractual obligation exists are less certain to be available than those that are confirmed and contractual.

As question 10 implies, lines of credit are often specifically established solely to back up commercial paper borrowings. Such lines impart a measure of security to the bank holding company. Evaluate the adequacy of the total amount of these lines in relation to the volume of outstanding commercial paper.

In asking about systematic rotation, question 11 is intended to help the examiner determine if the bank holding company routinely uses the proceeds from a line of credit to pay off another, and whether the bank holding company has ever been in an aggregate nonborrowing position during a given year. If the bank holding company routinely and continuously relies on its ability to repay its lines with other line borrowings, discuss the potential effects on the bank holding company's ability to service its debt properly.

Question 12 asks for information on reciprocal lines that reveals the relationship between the lender and the bank holding company. A line's reciprocity may have a bearing on the degree to which the borrower may rely on the lender.

Question 13 is intended to help the examiner evaluate the relationship between the parent and its nonbank subsidiary. In those cases in which a subsidiary is authorized to borrow directly on the parent's lines, the examiner should evaluate the parent's internal controls and management information systems for supervising the subsidiary's borrowings.

5010.23.1 APPENDIX A—COMMERCIAL PAPER RATINGS

Rating Notations by Commercial Paper Rating Companies*
(Highest- to Lowest-Quality Rating)

Rating Company†			
Standard and Poor's	Moody's	Duff and Phelps	Fitch
Investment grade:			
A-1/A1+	Prime-1 (P-1)	Duff-1 (D 1–/1/1+)	F-1/F-1+
A-2	Prime-2 (P-2)	Duff-2 (D-2)	F-2
A-3	Prime-3 (P-3)	Duff-3 (D-3)	F-3
Non–investment grade:			
B	NP (Not prime)	Duff-4 (D-4)	F-S
C (Doubtful)			
In default:			
D		Duff-5 (D-5)	D

* The definition of ratings varies by rating agency.

† This list of rating companies is for the examiner's information only. The list is not an endorsement of these companies by the Federal Reserve.

Listed on this page are any material assets and liabilities (actual and contingent) not detailed on the parent company's balance sheet or other schedules in the report. Contingencies include guarantees, lease or loan commitments, letters of credit, interest rate swaps, futures and forwards transactions and pending litigation.

The purpose of this report page is:

1. To determine the extent of the parent's potential obligations and the related strain on its financial capacity resulting from contingencies.

2. To determine the quality of "Other Assets." These assets are subject to evaluation and classification, if appropriate. "Other Assets" is sometimes found to include assets acquired in violation of section 4 of the Act (particularly section 4(c)(2)).

3. To detail "Other Liabilities" which may indicate external funding relationships otherwise not presented.

The information should be derived directly from the BHC's financial statements and the board of directors' and executive committee's minutes. Management should be asked to verify and explain any contingent liabilities. A review of all "Other Assets" and "Other Liabilities" in the general ledger and subsidiary ledgers should be conducted and analyzed for appropriate types and amounts of accounts. Suspense accounts should be aged, particularly if shown as a net amount.

If there are no contingent liabilities state "None reported." Normally only items appearing on the balance sheet as of inspection date will be listed. If prior periods' items are listed, columns with dates corresponding to those on the balance sheet should be used.

Refer to Manual section 5010.8 for guidelines on presentation of details of "Other Assets" or "Other Liabilities."

The parent's guarantees on the "Investment In and Advances To Subsidiaries" page should be included as contingent liabilities. "Other Assets" and "Other Liabilities" totals should reconcile to the line items on the "Parent Company Comparative Balance Sheet" page.

The reconciliation of capital accounts provides a summary of transactions which have caused changes in each of the equity accounts for the periods indicated. There should be no charges against paid-in capital that are properly chargeable to income.

The report page is used to record and analyze changes in stockholders' equity and to determine the effects on the financial condition of the holding company.

The information should be requested in the officer's questionnaire. Sources for prior periods include the FR Y–6, FR Y–9 LP, the annual and quarterly reports to stockholders, previous reports of inspection and the SEC Form 10-K. Current period changes can be obtained from the corporation's accounting or comptroller's department.

The presentation should begin with the last two fiscal years and include the most recent year-to-date interim. The column heading ''Capital Stock'' can include common and preferred stock. However, it is necessary to distinguish the type and amount which can be accomplished by using (C) and (P), for common and preferred, beside the amounts. An appropriate legend can be inserted in the column heading.

Net income reported should agree with that reported on the ''Comparative Statement of Income and Expenses (Parent)'' and the ''Comparative Statement of Income and Expenses (Consolidated)'' pages. If net income reported on this page does not agree with the income on a consolidated basis (i.e. differences caused by minority interests), include a footnote to explain the reason for the differences.

Balances at year-end and interim period should agree with accounts on the ''Parent Company Comparative Balance Sheet'' and the ''Comparative Statement of Income and Expense (Consolidated)'' pages. Footnote and explain any differences.

These ''Interim'' and ''Fiscal'' pages can be used when the parent receives income from more than one subsidiary, or where it is needed to support comments or analyses in other sections of the report. Both the ''Interim'' and ''Fiscal'' pages should be included in the report when this situation is applicable. From the data on these two pages, the examiner is able to analyze the contribution to overall earnings made by each of the subsidiaries. The schedule also reflects the extent of the parent's upstreaming income from its subsidiaries.

The purpose of these report pages is:

1. To determine the relative share of the individual subsidiary's contribution to the holding company operation;
2. To analyze the dividend payout ratio and to compare payouts between subsidiaries;
3. To determine the proportion of each subsidiary's income paid to the parent as fees; and
4. To determine the degree of interest coverage on advances to subsidiaries.

For the interim and fiscal periods, some items can be obtained from the parent's income statement and from the BHC's workpapers showing eliminations on the consolidating income statement. Additional information can be obtained from the holding company's accounting department or comptroller.

The banks should be presented first, then nonbanks. Subtotals should be provided.

The dividend payout ratio is calculated by dividing total dividends by net income after taxes and securities transactions. Show an average payout ratio for banks and nonbanks, respectively, and an overall payout ratio. Do not show negative percentages.

5. Fees as a percentage of the subsidiary's operating income is calculated using total operating income before expenses. No subtotals for banks and nonbanks are required.

Equity in undistributed earnings, dividends, interest and total fees should equal that reported for each period on the ''Comparative Statement of Income and Expenses (Parent)'' page. For wholly-owned subsidiaries, the sum of the ''Equity in Undistributed Earnings'' and ''Dividends'' columns should equal its net income for the related period.

The analysis is performed and the statement is completed for BHCs with consolidated assets in excess of $1 billion, or when substantial fixed charges exist or debt is outstanding, when required by the Reserve Bank. This statement indicates the results of the parent's management of its cash position and identifies major sources of working capital and areas of disbursement. The statement also presents the cash earnings of the parent company. The cited ratios measure the parent company's ability to meet its fixed obligations and the ability of the residual earnings to cover common stock dividends. When combined with an analysis of the parent company's cash income sources from subsidiaries, it serves as a partial basis for determining the parent company's debt servicing capacity, and thus an assessment of its leverage. In addition, projected cash flow information aids in the analysis of the BHC's ability to properly service its debt.

Only items affecting cash should be shown. The ''Next Fiscal Year'' column completion is optional at the examiner's discretion if the inspection occurs early in the current year (i.e. the inspection is in January 19X6 and thus would require the data through the end of 19x7).

The objective of the report page is:

1. To determine the ability of the parent to manage its cash position and operate within debt service and funding requirements;
2. To measure the parent's ability to meet its fixed obligations and its dependency on borrowed funds to meet its cash needs;
3. To determine if the parent company's dividends to stockholders are covered by residual cash earnings;
4. To analyze any cash flow transactions which may adversely affect the financial stability of the parent;
5. To discuss parent company deficit cash flows provided by its own operations.
6. To discuss any parent company borrowings needed to sustain dividend payments to shareholders;
7. To discuss the scope for increasing cash flow to the parent company; and
8. To discuss steps management has taken, or plans to take, to restore adequate cash earnings coverage for fixed charges and dividend payments, and whether such plans should be commensurate with the maintenance of adequate loan loss reserves and Tier 1 capital levels in the bank and major nonbank subsidiaries.

The information may be requested in the officer's questionnaire and a copy of the ''Cash Flow Statement (Parent)'' page may be included with the questionnaire.

To complete the page refer to the holding company's cash receipts and disbursements journal and its general ledger and income statement(s). Also refer to any cash flow and income projections prepared by the organization.

The statement should be verified and reconciled, to the extent possible, to the BHC's published statements. Any additional items not provided for in the preprinted statement can be separately listed in an appropriate space.

Any dividends considered unreasonable should be discussed in the comments section. Dividends paid with funds derived from new borrowings should be discussed in detail.

Any significant cash flow transactions should be discussed. Refer to section 4010 for examples of such transactions.

If shortfalls exist, discuss on the ''Cash Flow Statement (Parent)'' page. For example, if the parent has a deficit cash flow provided by its own operations (as is often the case), discuss how the parent offsets (or plans to offset) the deficit. If the question is not applicable, state ''NA.''

If the BHC must incur additional debt in order to sustain its dividend payments to shareholders, discuss this in detail on the ''Cash Flow Statement (Parent)'' page.

To the extent that the accrual method of accounting is used, income and expense items should agree with the figures on the ''Comparative Statement of Income and Expenses (Parent),'' and between balance sheet periods, the ''Statement of Changes in Stockholder's Equity (Parent)'' pages and the ''Income from Subsidiaries'' for the fiscal year are as follows:

1. Dividends, and management and service fees from subsidiaries should agree with those on the ''Comparative Statement of Income and Expenses (Parent)'' and the ''Income from Subsidiaries'' pages;
2. Interest income should agree with the amounts reported on the ''Comparative Statement of Income and Expenses (Parent)'' and the ''Income from Subsidiaries'' pages;
3. Interest expense should agree with the amounts reported on the ''Comparative Statement of Income and Expenses (Parent)'' page;
4. Salaries and employee benefits should be the same as those reported on the ''Comparative

Statement of Income and Expenses (Parent)'' page; and

5. Dividend payments made by the parent should agree with those reported on the ''Statement of Changes in Stockholder's Equity (Parent)'' page.

Other increases and decreases in cash which should agree with changes in balance sheet items on the ''Parent Company Comparative Balance Sheet'' page are:

1. Increases in borrowed funds;
2. Decreases or increases in advances to subsidiaries; and
3. Debt retirement or reductions.

The Parent Company Liquidity Position page is prepared for bank holding companies with consolidated assets in excess of $1 billion and those with substantial debt outstanding, as well as select others at the option of the Reserve Bank. The report schedule provides a structured analysis of all assets and liabilities within predetermined remaining maturity categories. The schedule is designed to place emphasis on remaining maturing assets and liabilities of less than one year.

When the schedule is initially completed, the examiner is provided with an indication of whether the parent company has an adequate cushion of short-term liquid assets within the 0 to 30 days and the 0 to 90 days categories to cover short-term liabilities, or whether a pattern of short-term funding gaps exist. Following adjustments, if any, to maturing assets or liabilities, the resulting schedule sets forth a framework for observing funding mismatches, thus serving as tool for assessing the parent company's overall liquidity position.

A net positive gap is expected in the 0 to 30 days category to show the parent's ability to ride out a temporary market disarray. Similarly, a cumulative positive position is expected in the 0 to 90 days categories, despite any deficiency within the first 0 to 30 days category. A failure to satisfy those conditions requires the examiner to address the deficiency within the ''Examiner's Comments'' page. Results of the analysis are to be discussed in the parent company section on the ''Analysis of Financial Factors'' page in the inspection report.

The report schedule is prepared:

1. To determine whether the bank holding company is avoiding funding strategies that could undermine public confidence in the liquidity or stability of their banks; and

2. To evaluate the holding company's ability to meet its maturing obligations, covert its assets with minimal loss, obtain cash from other sources, or roll over or issue new debt obligations;

3. To determine whether the level of the parent's liquid assets is sufficient to cover its short-term obligations;

4. To analyze the contractual maturity structure of its assets and liabilities and to estimate the underlying liquidity of the parent company's liabilities and assets, giving particular attention to interest bearing deposits in and advances to subsidiaries (Note: Parent company advances to subsidiaries should be considered a reliable source of liquidity only to the extent that they fund assets of high quality that can be readily converted to cash);

5. To identify funding surpluses or deficits for specific maturity intervals;

6. To provide an analytical framework for observing funding mismatches in assessing the parent company's overall liquidity position;

7. To provide an analytical tool and a basis for discussion of parent company liquidity with management; and

8. To provide a basis for developing or evaluating existing parent company contingency plans, including any reliable unused back-up lines of credit. (Note: In the event that maturing liquid assets are not sufficient to satisfy short-term obligations, primarily in the 0 to 90 days categories, and the parent company has no contingency plan to cover mismatches (shortfalls) in the under 1 year categories, the parent company must be requested to develop such contingency plans that must include standby facilities that will be reliable during times of financial stress. For those BHCs with less than satisfactory parent or consolidated supervisory ratings (3 or worse), or any BHC subject to serious liquidity or funding pressures, those BHC's must include in their contingency plan specific plans to reduce or eliminate entirely their outstanding short-term obligations.)

The information for the schedule should be obtained from the parent company's balance sheet for the contractual maturing amounts of assets and liabilities, and slot the amounts into the five maturity categories depicted.

While analyzing the contractual maturities of the assets and liabilities, the examiner must consider the underlying liquidity of the parent's intercompany advances and deposits and the extent to which they fund high quality assets that can be readily converted into cash.

The examiner should refer to the Manual's funding sections 2080.0 to 2080.6 and sections 4010.0 to 4010.2 that address parent company cash flow and liquidity.

The report page data should be entered as of the inspection report financial statement date. The examiner may, at his or her option, incorporate the schedule into the inspection report to substantiate or clarify particular judgements. Assets should be recorded net of any allowance (contra asset) accounts.

The examiner should assess the contractual maturity structure of the parent company's balance sheet by preparing the schedule according to the parent's maturing assets and liabilities. The scheduled can be adjusted to better appraise the parent company's liquidity position by analyzing interest bearing deposits with bank subsidiaries and advances to subsidiaries. The ''Other Assets'' may be sub-categorized within the additional space provided. The completed schedule may be used as a basis of discussing parent company liquidity with management. The examiner should comment on the findings on the ''Analysis of Financial Factors'' page in the inspection report (whether or not the schedule is included in the report).

The total of each asset account should equal the respective assets as listed on the ''Parent Company Comparative Balance Sheet'' for the inspection report financial statement date, net of any separately listed allowance or contra asset account balances or any adjustments for market valuations. The total of each liability account should equal the respective liabilities as listed on the ''Parent Company Comparative Balance Sheet'' as of the inspection report financial statement date.

This report page is included in all reports when assets are classified and written up. For inspections of bank holding companies with less than $150 million in total assets, it is to be included in the Core section of the report. The information reported represents analyses and conclusions for the classification of the parent's assets and identifies all of the nonbank subsidiary's classified assets. Refer to the instructions for the ''Summary of Consolidated Classified and Special Mention Assets, and Other Transfer Risk Problems,'' Core page 7, for a discussion of classification standards.

The purpose of the report page is to—

- determine the risk involved in the parent's activities,
- determine the adequacy of reserves,
- disclose problem assets requiring management's attention, and
- aid in the analysis of the condition of the nonbank subsidiary(ies).

The information is obtained by an evaluation of the parent's assets and the assets of nonbank subsidiaries. For nonbank company assets, the information is obtained through examining the loan and lease portfolios, and reviewing credit files, loan reviews, past-due lists, credit analyses, and watch lists prepared by the holding company.

Any asset classified doubtful or loss requires a write-up unless the amount is insignificant to the company's operations. *Where asset reviews are undertaken, the examiner should note at which entities the asset reviews were performed, and their level of coverage.* Any classified asset that is challenged by management also requires a write-up.

Loan write-ups may extend across the entire page. At a minimum, show the total amount of extension of credit booked by the parent, name of debtor, name of guarantors, collateral, amount of classification in appropriate category, date originated, maturity, purpose, and where deemed necessary, a short write-up giving the reason for the classification. Also identify any participation with a subsidiary, including the subsidiary's name and amount held by the subsidiary.

Nonbank loans classified substandard may be listed alphabetically with no write-up required, unless the holding company management disagrees with the classification. For other nonbank assets classified substandard, some minimum comment is necessary. For example, the examiner may make one general comment concerning the deficiencies of several credits or other assets listed.

Any nonbank subsidiary loan classified doubtful or loss, where the amount classified exceeds the lesser of $100,000 or 5 percent of the subsidiary's total assets, should include a brief write-up stating the reason(s) for classification. However, at the discretion of the examiner, any doubtful or loss classification may be the subject of a write-up.

In the case of nonbank subsidiaries such as consumer finance companies where there are relatively small amounts and a large volume of accounts involved, the use of ''bulk classification'' by degree of delinquency may be more desirable than listing each loan individually. The examiner may provide write-ups on any classified nonbank subsidiary asset deemed appropriate.

The classification totals should agree with ''Examiner's Comments,'' and/or ''Analysis of Financial Factors'' pages. Any major asset problems may be discussed on the ''Examiner's Comments'' or ''Analysis of Financial Factors'' pages and should be cross checked.

This FR 1225 report page presents consolidated financial statement data (a condensed balance sheet and income data) for the lead bank and any other subsidiary bank or banks (that is, subsidiary banks that have consolidated assets of $150 million or more) or for those bank subsidiaries that exhibit conditions warranting special supervisory attention (that is, rated composite 3, 4, or 5 under the Uniform Interagency Bank Rating System). The summary of the examiner's comments and other important data extracted from the latest report of examination are incorporated into the analysis of the bank component of the BOPEC rating on the ''Analysis of Financial Factors'' page. The summary is incorporated when a bank subsidiary comprises 10 or more percent of consolidated assets and/or when a bank subsidiary evidences material financial deficiencies or other characteristics that should be brought to the attention of the bank holding company's board of directors including noted bank violations.[1] As banking assets make up the majority of the assets of the holding company, the condition of the larger banks and special supervisory attention banks may have a significant impact on the condition of the consolidated organization.

The financial statements should be requested in the officer's questionnaire. Balance-sheet and income data can be obtained from the reports of condition, income, and dividends of the subsidiary banks.

Provide a condensed balance sheet as of the inspection date and a statement of income. The income data should be presented in a comparative columnar format and should include total operating revenue, total operating expenses, net operating income, applicable income taxes, net securities gains or losses, and net income. The balance-sheet and income data, while condensed, should provide detail to permit analysis of earnings and capital. Where any past or potential problems exist, the examiner may include more detailed statements to support comments presented.

All pages should bear the same ''Bank Subsidiaries'' page number, except that the number should be suffixed with a −1, −2, −3, etc., to reflect the subsequent ''Bank Subsidiaries'' pages.

The FR 1241 ''Bank Subsidiary'' report page is used for the lead bank subsidiary when its assets are less than $150 million.

The following items should be checked to make certain that—

1. advances from the parent company agree with the ''Investment in and Advances to Subsidiaries'' page;
2. the holding company's proportionate share of the capital accounts reconciles with the investment shown on the ''Investment in and Advances to Subsidiaries'' page;
3. external (unaffiliated) debt shown agrees with that on the ''Unaffiliated Borrowings'' page;
4. net income reconciles with the sum of equity in undistributed earnings and dividends on the ''Income from Subsidiaries'' pages, in proportion to the holding company's percentage of ownership; and
5. any relevant comments made on the ''Bank Subsidiaries'' pages agree with Core page 1, ''Examiner's Comments and Matters Requiring Special Board Attention.''

1. In determining the subsidiary banks that require write-ups, examiners should be mindful of the effect that the cross-guarantee provisions of FIRREA can have on nontroubled bank subsidiaries.

For each direct nonbank subsidiary (and its significant subsidiaries not consolidated in its statements), a summary is to be provided of its history, activities, classifications, and risk exposure. Nonbank subsidiary pages consist of ''Nonbank Subsidiary,'' ''Nonbank Subsidiary Financial Statements,'' and ''Nonbank Assets Subject to Classification.'' Each subsidiary should be presented as a ''unit.'' Successive subsidiaries should be sequentially presented (for example, 18a, 18b, etc.). The information provided on the report page should aid in the determination of permissibility of activities and locations, and the evaluation of the subsidiary's asset quality.

1. Provide the proper name of the organization, location, date of approval, date of acquisition or establishment, date activity commenced, statutory authority, and approved branch office locations should be obtained from Reserve Bank records, presented, and verified with the holding company's records. Note the date of approval for each activity and office, if applicable.

2. For going concerns acquired by the bank holding company, state the date acquired. For de novo subsidiaries, state the date established .

3. For de novo subsidiaries, state the date activity commenced. Indicate if the BHC has received approval for any de novo activity that has not yet been commenced. Identify any approved activity for which authority has expired.

4. Number 6 refers to the exemptive provision (statutory authority) of the Bank Holding Company Act relied upon to continue to engage in the activity. If section 4(c)(8) of the act is indicated, also provide the corresponding reference to section 225.25(b) of Regulation Y to indicate the specific activities.

5. Provide the city and state location for each branch; however, if the subsidiary has a great number of branches (for example, a consumer finance subsidiary), the examiner may present only the number of offices located in each state or foreign location.

6. For the history and description section, summarize the activities in which the company is engaged and discuss how it has expanded its operations (de novo or by acquisition). Discuss any violations that may have been uncovered.

7. Prepare a written risk assessment of each active nonbank subsidiary, addressing the financial and managerial concerns outlined below.[1] This assessment is to identify subsidiaries with a risk profile that warrants an on-site presence. In formulating this assessment, the examiner should consider all available sources of information including, but not limited to—

- findings, scope, and recency of previous inspections;
- ongoing monitoring efforts of surveillance and financial-analysis units;
- information received through first-day letters or other pre-inspection communications;
- regulatory reports and published financial information; and
- reports of internal and external auditors.

The risk assessment should address each nonbank subsidiary's funding risk, earnings exposure, operational risks, asset quality, capital adequacy, contingent liabilities and other off-balance-sheet exposures, management information systems and controls, transactions with affiliates, growth in assets, and the quality of oversight provided by the management of the bank holding company and nonbank subsidiary. Examiners are expected to document their assessment of the overall risk posed by each nonbank subsidiary on this report page or equivalent inspection workpaper. See SR-93-19.

The examiner should make certain that the classifications and valuation reserves summarized for the nonbank subsidiaries agree with totals on either the ''Summary of Consolidated Classified and Special Mention Assets, and Other Transfer Risk Problems'' page or the ''Parent Company and Nonbank Assets Subject to Classification'' page.

1. The assessment of nonbank activities in large, complex organizations may be focused on an intermediate-tier company with oversight responsibility for multiple nonbank subsidiaries.

This page presents a condensed statement of condition for credit extending and special supervisory attention nonbank subsidiaries (and others at the examiner's discretion) as of the inspection date, and income data for the latest fiscal year and the year-to-date. The purpose of the report page is to aid in the analysis of the condition of each nonbank subsidiary and in the analysis of its effect on the consolidated company. The page is completed for all credit extending subsidiaries and may be completed for any other subsidiary deemed appropriate.

Financial statements should be requested in the officer's questionnaire. In the case of larger subsidiaries other financial information may be obtained from the F.R. Y–6, the SEC Form 10-K, published reports to stockholders and reports filed with professional associations. Details relevant to the financial statements can be found by reviewing various accounting records.

The balance sheet should be structured to provide sufficient detail for meaningful analysis, including specifics on valuation reserves and stockholders' equity. Income data should also be provided for the latest fiscal year plus the year to date (i.e., total revenue, net operating income, net income, rates of return). Provide a condensed income statement for the year to date if considered necessary.

The examiner should ascertain that:

1. Advances from the parent agree with the ''Investment in and Advances to Subsidiaries'' page;
2. The holding company's proportionate share of the capital accounts reconcile to the investment shown on the ''Investment in and Advances to Subsidiaries'' page;
3. External debt reported agrees with the information reported on the ''Liquidity and Debt'' Confidential page ''C''; and that
4. Net income reconciles with equity in undistributed earnings and dividends paid on the ''Income from Subsidiaries'' pages, in proportion to the holding company's percentage of ownership.

This page presents the fidelity and other indemnity insurance coverage of the holding company and its subsidiaries. Refer to section 2060.5 for related information. The report page is used to provide a summary as to whether:

1. The parent and nonbank subsidiaries have been insured against the potential for significant losses by maintaining proper and sufficient insurance;
2. A comprehensive review of the insurance program is conducted periodically by management and at least annually by the board of directors and entered into the minutes;
3. A determination can be made as to which entity(ies) is responsible for paying the premiums and if the manner in which such payments are allocated is equitable among the affiliates that receive the coverage benefits; and
4. Procedures are in place to assure that claims are filed promptly.

The information on insurance coverage is usually available from an ‘‘insurance officer’’ and from a review of insurance policies during the inspection. The examiner should conduct a review of insurance coverage with the ‘‘insurance officer.’’ In summarizing results, the examiner should indicate if any nonbank subsidiary is covered under a separate policy or if it is not covered. Also, it should be stated whether the policy is maintained by the bank and whether the BHC and nonbanks are covered by the bank’s policy. The method used to allocate the cost of insurance to the subsidiaries should also be provided.

The comments detailed on the report page should be consistent with summarized comments on the ‘‘Policies and Supervision’’ page and the ‘‘Other Supervisory Issues’’ page, item 7, if included in the report. Any noteworthy deficiencies in the insurance program may be included on the ‘‘Examiner’s Comments’’ page at the examiner’s discretion.

Procedures for Inspection Report Preparation (Reserved for Future Use)

Section 5010.34

This report page consists of topics dealing with litigation and commitments, the supervisory reports, intercompany transactions and other topics of supervisory concern.

The report page includes questions that are worded to evoke a ''yes'' response, or if there are no problems in a particular area, a ''no'' response. If there are any deviations therefrom, responses are required. Positive responses as to either the adequacy of the insurance or audit programs should only be accompanied by a reference to the appropriate inspection report page that addresses the topic. For additional guidance on answering the questions on this inspection report page refer to the ''Other Supervisory Issues'' FR 1241 report page instructions.

5010.35.1 INTERCOMPANY TRANSACTIONS (QUESTIONS 1)

This question inquires as to the existence of significant intercompany transactions or diversions of bank income subject to adverse comments. This question guides the examiner when documenting the review of compliance with Board policy, statutes and regulations regarding various kinds of intercompany transactions.

For information on diversion of bank income, review management and service fees charged the bank and any compensating balances maintained by the bank on behalf of affiliates indicated on the ''Comparative Statement of Income and Expenses (Parent)'' and the ''Commercial Paper (Parent)'' pages, respectively. Comments on section 23A considerations may be found by a review of bank examination reports. The examiner may refer to Manual 2020.6 (management and service fees) for instructions on examining for diversions of bank income. For information on examining for 23A and 23B violations, see Manual section 2020.1 (transactions between affiliates) and the other Manual intercompany transactions sections 2020.2–2020.7.

Violations of section 23A and 23B of the Federal Reserve Act and section 106(b) of the 1970 Amendments to the Bank Holding Company Act may be summarized on the ''Examiner's Comments'' page and listed on the ''Violations'' page with the reader referred to this page for detail. If the examiner includes comments concerning other intercompany transactions on Core page 1, ''Examiner's Comments,'' the information should be cross-checked.

5010.35.2 COMPENSATING BALANCES (QUESTION 2)

If a subsidiary bank is not adequately compensated for maintaining compensating balances at another institution for debt advances to the holding company, provide:

1. The average collected and book balance or the range of the balance;
2. Any arrangement whereby the loan or line of credit agreement between the creditor bank and parent contains a requirement to maintain a correspondent account; and
3. Comments as to whether the subsidiary bank is reimbursed for maintaining the compensating balance.

Refer to Manual section 2020.4 (compensating balances).

5010.35.3 INTERCORPORATE INCOME TAX PRACTICES (QUESTION 3)

Information on intercorporate tax practices may be obtained from the accounting or comptroller's department. Manual section 2070.0 (taxes) may be referred to for information on examining intercorporate tax transactions which includes the Board's intercorporate tax policy statement of September 20, 1978.

In addition to the above references, examiners should be aware that whenever there is a consolidated income tax return filed, it is important that a formal tax agreement exists between the parent and each subsidiary (approved by each board of directors). Examiners should encourage management to prepare such an agreement if not already in place.

Board policy states that taxes paid by a subsidiary bank to its parent should not be in excess of what the bank would pay if it filed on a separate entity basis. However, certain adjustments, in particular the allocation of tax benefits in a consolidated return, may result in higher payments than would have been made had the bank been unaffiliated (i.e., the surtax exemption must be allocated between organizations filing a consolidated return whereas an entity filing alone could use the entire exemption). The Board normally would regard such adjustments (that result in amounts in excess of filing alone) as acceptable. The Board does not wish to prescribe the tax accounting methods to be used by BHCs. However, the Board does require that those methods employed give bank subsidiaries equitable treatment.

The examiner should comment whenever any of the following has occurred:

1. A subsidiary has been required to make tax payments to its parent that significantly preceded the date the consolidated tax payments are paid to IRS. (In general, ''significantly'' means not in excess of five business days.)
2. A subsidiary bank is due a tax refund due to a fiscal net loss on a taxable basis (or due to other tax credits) and the parent has not refunded to the bank taxes paid by the bank to the parent in previous tax periods.
3. The subsidiary bank has passed up deferred income tax liabilities to the parent along with an equivalent amount of cash or earning asset. Such transactions must be reversed by a reinstatement of the deferred tax on the books of the bank, along with the transfer by the parent of an equivalent amount of cash or appropriate earning asset.

5010.35.4 TIE-IN ARRANGEMENTS (QUESTION 4)

As for tie-in arrangements, see Manual section 3500.0 (tie-in considerations). This Manual section provides information on examining for impermissible tie-in arrangements. Information on tie-in arrangements is available from BHC and nonbank subsidiary management and may also be found by reviewing standard lending agreements and manuals.

5010.35.5 INSIDER TRANSACTIONS (QUESTION 5)

Consider:

1. The policy in regard to extensions of credit by a bank holding company or its nonbank subsidiaries to the BHC officials (executive officers, directors or ''more than 10 percent'' shareholders) or the BHC officials' interests in the organization;
2. Prohibitions on bank extensions of credit contained in the Financial Institutions Regulatory and Interest Rate Control Act of 1978; and
3. Whether the bank holding company has a conflict of interest statement or business ethics policy that has been distributed to employees.

If there are insider transactions subject to comment, list the parent and nonbank subsidiary extensions of credit to BHC officials. Also, comment on the compensation to the officials. See Manual sections 2050.0, 2110.0, and 5010.36.

5010.35.6 LITIGATION (QUESTION 6)

A ''yes'' response to this question would require a summary of any litigation involving the parent bank holding company and the bank and nonbank subsidiaries, which could have a significant effect on the holding company. The purpose of this question is to aid the examiner in the analysis of the financial condition of the holding company by determining if any pending litigation poses a threat to the financial condition of the BHC.

Any information on law suits should be requested in the officer's questionnaire. Information on litigation which may have a significant impact on the company is often included in the published annual report to stockholders or in the SEC Form 10-K.

Comments on litigation should be presented in narrative form summarizing the details of the lawsuit, including, if possible, the opinion of the holding company's counsel as to the possible outcome of the suit. Generally, include only suits representing more than 10 percent of the holding company's stockholders' equity capital. Discussion of immaterial litigation should be avoided.

Any litigation which may have a significant effect on the bank holding company may be summarized on the Examiner's Comments, Core page 1, at the discretion of the examiner. Also, any litigation which, in the opinion of management or counsel, is expected to result in a significant liability should be noted on the ''Contingent Liabilities (Parent)'' page.

5010.35.7 INSURANCE PROGRAM (QUESTION 7)

See Manual sections 2060.5 and 5010.33.

5010.35.8 AUDIT PROGRAM (QUESTION 8)

A negative response to this question will result from application of the inspection instructions found in Manual sections 2060.1 and 5010.34. Comments responding to this question should be confined to briefly summarizing any audit program deficiencies and should reference any detailed information provided on other report pages.

5010.35.9 CREDIT QUALITY REVIEW PROGRAM (QUESTION 9)

This question refers to the examiner's review of the BHC's internal loan review program. A negative response would result from the examiner's use of the inspection instructions and procedures found in Manual section 2060.6.

5010.35.10 SUPERVISORY REPORTS (QUESTION 10)

A "yes" response with regard to this topic would result in providing information on the timeliness and accuracy of the bank holding company's submittal of required reports, such as the FR Y–6, Y–8 and the Y–9's to the Reserve Banks. If the bank holding company is consistently late in filing its reports or if there are repeated discrepancies that need correction, it could be indicative of operational deficiencies or a lack of managerial direction within the bank holding company.

Information on the timeliness and accuracy of reports must be obtained from the Reserve Bank unit handling the reports and by verifying selected items to corporate records. If reports are routinely filed late or inaccurately, the reason and the measures the bank holding company may be taking to eliminate the problem should be stated on this inspection report page.

5010.35.11 OUTSTANDING COMMITMENTS TO THE BOARD OF GOVERNORS (QUESTION 12)

This question reminds the examiner to appraise the bank holding company's compliance in fulfilling commitments made to the Board or the Reserve Bank. Thus, if there are any commitments outstanding which the holding company has made to the Board or the Reserve Bank, appropriate comments should be provided on the page.

Each Federal Reserve Bank is required to report to the Board's Division of Banking Supervision and Regulation on a semi-annual basis the status of unfulfilled commitments. The examiner should review this Reserve Bank report before beginning the inspection.

Commitments should be summarized presenting the nature of the commitment, the date the commitment was made, and, if applicable, the time frame in which it must be fulfilled. If the time frame has expired, or if an extension is deemed necessary to fulfill the commitment, details must be presented. The examiner may choose to make a reference to the unfulfilled commitment on the "Examiner's Comments" Core page 1, if considered appropriate.

The Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA), as amended by FDICIA, accompanied by the Board's complimentary Regulation O, governs *bank* extensions of credit to insiders. With the passage of FDICIA and the complementary revision of Regulation O, there is the possibility that there will be an increase in the volume of parent company and nonbank subsidiary extensions of credit to BHC officials and their related interests. The report page presents information on parent company and nonbank extensions of credit to insiders, as well as parent company and nonbank subsidiary investments in and loans on stock or obligations of BHC officials' related interests. Examiners must reference Manual section 2050.0 to complete this page.

This report page is intended to identify extensions of credit to BHC officials so that those credits may be reviewed for propriety and compliance with the policies of the BHC and Manual section 2050.0. Although *Regulation O applies only to bank extensions of credit*, for BHC inspection purposes, definitions contained in Regulation O shall be used by System examiners in order to provide a uniform, comparable approach to reviewing extensions of credit to BHC officials.

The information requested on the report page should be requested in the officer's questionnaire. Other sources may include the annual report to shareholders, the FR Y–6 and filings with the Securities and Exchange Commission.

BHC examiners should review Manual section 2050.0 and Regulation O, and should be familiar with the definitions contained in the regulation. Examiners are asked to identify such credits for in-depth review and analysis. Although Regulation O applies specifically to extensions of credit by banks, and not the parent or nonbank subsidiaries, examiners may criticize a BHC's or nonbank subsidiary's direct extensions of credit to BHC officials or their related interests as an unsound practice or may criticize a specific loan for credit reasons. *Such extensions of credit are not to be cited as violations of Regulation O.*

During a BHC inspection, BHC officials should be made aware that information necessary for the completion of this page is being collected to evaluate practices, policies, or particular credits, but that FIRA and Regulation O apply exclusively to bank extensions of credit.

Section 215.4 of Regulation O entitled ''General Prohibitions'' sets forth various restrictions on bank extensions of credit to BHC officials. In general, if the BHC examiner reviewing BHC and nonbank subsidiary direct extensions of credit to BHC officials and their related interests concludes, after consultation with counsel for the Reserve Bank, that the extension of credit would not have been in compliance with section 215.4 had it been a bank extension of credit, the examiner may conclude that it is appropriate to criticize the practice or the loan. If it is concluded that the BHC or nonbank subsidiary extended the loan in order to circumvent the restrictions on bank extensions of credit, comments to that effect should be incorporated onto the ''Other Supervisory Issues'' page or a ''Continued'' page. Such comments may be also summarized on page 1, ''Examiner's Comments'', at the discretion of the examiner based on the degree of materiality, severity and impact.

Specifically, section 215.4 of Regulation O (in part) requires bank extensions of credit to BHC officials not to be on preferential terms, not to have more than the normal risk of repayment, and over certain dollar amounts to be approved by the bank's directors. In addition, it requires bank extensions of credit to executive officers, principal shareholders, and their related interests not to exceed the bank's legal lending limit to any such individual and his/her related interests.

In reviewing BHC and nonbank extensions of credit to ''related interests,'' note that a related interest is defined in section 215.2(k) of Regulation O as ''a company that is controlled by a person . . .'' The definition of ''company'' for purposes of Regulation O specifically excludes any ''insured bank.'' However, for purposes of completing these report pages, and evaluating the propriety of BHC and nonbank extensions of credit to (and investments in) ''related interests'' of BHC officials, ''related interests'' shall include ''banks.'' Therefore, a BHC or nonbank direct extension of credit to (or investment in) a BHC official's ''related interest'' that is itself a bank (other than a subsidiary bank of the subject BHC), should be reported.

For purposes of this page, ''direct'' extensions of credit represent obligations of the BHC official or related interest, alone or as co-maker while an ''indirect'' extension of credit includes a BHC official's or a related interest's endorsement or guarantee of an extension of credit to a third party, and obligation's to the BHC official's immediate family (spouse, all minor children, and all children, including adults, residing in the individual's home). BHC and nonbank extensions of credit to a BHC official who serves in two or more capacities, i.e., director and executive officer, should only be presented once.

In completing the ''Schedule,'' the examiner may select the cut-off amount used to determine which items are listed individually based on materiality. However, any extension of credit (or group of credits) to an individual BHC official and his/her related interests that would have exceeded the subsidiary bank's lending limit had it been made by the bank, should be listed individually. (In multibank holding companies, use the banks' aggregate lending limit.)

In listing ''Terms'' within the ''Schedule,'' include at a minimum interest rate and date of maturity. ''Comments'' are intended to include a brief description of any collateral, endorsements, the purpose of the loan, the nature of the borrower's relationship to the lender if not self-evident, and status of repayment if delinquent or classified.

Identify the source and cost of funds used by the BHC to extend the loan. Any adverse affect to the BHCs net income should be commented on.

Extensions of credit should be consistent with policies summarized on the ''Policies and Supervision'' page. Otherwise, additional comments might be warranted.

The purpose of this report page is to present a brief analysis of the interest sensitivity of assets and liabilities on the inspection date and to further support the analysis in the form of ratios similar to a current ratio and a net working capital to total assets ratio. Positive or negative gaps within maturity buckets are gathered in the form of cumulative gap totals. The analysis can be prepared for each level of the organization.

Such an analysis is designed to determine whether maturing interest sensitive assets match maturing interest sensitive liabilities on a 1 to 1 basis within specified maturity ranges and on a cumulative basis over time.

The information for the report page can be gathered from financial management maturity analyses and interest sensitivity reports prepared by the bank holding company's management. A limited amount of maturity information on interest sensitive assets and liabilities may be obtained from Bank Call Reports, Bank Holding Company Y reports, Bank Performance Reports, and BHC Performance Reports, and can be used if the inspection ''as of'' date is the same as the date of these reports.

From information collected, list interest sensitive asset totals and liability totals within the maturity buckets provided for the consolidated entity. The maturity ranges may be adjusted to or expanded to coincide with interest rate sensitivity reports generated by the bank holding company management.

Next, subtract the liability totals from the asset totals to get the ''Gap'' totals. For each maturity range beyond 91 days, add the next repricing interval ''Gap'' total to the previous ''Cumulative Gap'' totals to obtain the repricing interval's cumulative gap.

To determine the ratio of interest sensitive assets to interest-sensitive liabilities, use the cumulative gap for the denominator. Extend the percent out to at least two decimal places.

Provide narrative analysis for any maturity period or cumulative negative or positive gap positions, stating what measures will be taken by management to address any adverse gap positions.

This report page presents generalized questions for the examiner to answer on treasury activities and capital markets. This page must be included in inspection reports prepared for bank holding companies that have significant exposure in the capital markets. Specific guidance can be found in section 2125.0, in the Federal Reserve System's *Trading Activities Manual*, and in SR-93-69, December 20, 1993. Procedures for inspecting and preparing the written analysis should be based on this supervisory guidance. In banking organizations with national or state nonmember lead banks and where capital markets activities are conducted exclusively at the subsidiary bank, examiners should coordinate the collection of the information included on this page with the lead bank supervisory agency.

The purpose of this report page is to identify directors and principal officers and determine the level of participation and responsibility in the affairs of the holding company, and to identify outside relationships in order to determine conflicts of interest. The page contains the names of the principal officers of the company and their position with other subsidiaries. This page also presents the names of directors, the number of years they have served in that capacity, their year of birth (to possibly assess management's plans for succession), regularity of their attendance at directors' meetings, and principal outside employment. Note if any director is also a director of a Federal Reserve Bank or branch.

The directors and principal officers' fees, compensation and other benefits information is also to be obtained and retained in the workpapers. If desired by the Reserve Bank, such salary, bonus, benefits, and other remuneration information may be included on this page. Criticism of directors' fees should be carefully considered.

The directors' ownership information (i.e. address of each director and the number of shares owned) is also to be obtained and may also be reported or retained in the workpapers. If the holding company has an advisory board or honorary directors, the data on these persons may be included on the report page at the examiner's discretion.

All information on principal officers and directors such as year of birth, responsibility and compensation, etc. should be requested in the officer's questionnaire. Attendance data should be available from the board of directors' minutes. Such information may also be contained in reports to shareholders, FR Y–6, proxy statements and SEC filings.

The directors and principal officers should be listed alphabetically with their city and State of residence indented immediately below their names. If appropriate for mailing purposes, show each director's mailing address.

The principal officers and directors are to be listed in order of rank, and alphabetically where officers have identical titles. For directors and principal officers, membership on principal committees of the board should be coded and placed immediately after the name on the same line (i.e., E = Executive, A = Audit). If a director has been elected since the last inspection, the date of election should be shown immediately after his name. For example:

John Smith elected 4-1-x1

The officer and director positions held with subsidiaries should be kept as brief as possible, utilizing abbreviations established on the ''Structure and Abbreviations'' Core Page 3. List only major positions if routinely assigned to staff of all subsidiaries.

A brief summary of benefits provided to officers and employees (i.e., pension plans, life and health insurance) may be presented at the bottom. Such information can assist in determining whether the principal officers appear to be adequately or overly compensated.

Special financial arrangements for specific officers may also be noted. Such arrangements would include salary contracts, unusual bonuses, fees or expense allowances, stock options, deferred compensation, and exclusive use of real estate, automobiles and airplanes.

When indicating occupation or principal business affiliation of directors, use concise, descriptive designations instead of general notations such as ''merchant'' or ''industrialist.'' If the director is an officer or principal in a firm, show also the nature of the business in parentheses (e.g., law firm, CPA, pharmaceutical manufacturer, etc.).

The examiner should verify that the directorship is in compliance with Regulation L or R and that the number of directors is consistent with the corporations' bylaws. The examiner should also indicate the regular schedule of directors' meetings at the bottom of the report page to provide the Reserve Bank with information needed to plan attendance at board meetings.

Examiners should be careful to use the same names and titles of officers when referring to the individuals elsewhere in the report.

In general, this report page presents pertinent information that is deemed confidential by the Reserve Bank and available to regulatory authorities. The report page is used to discuss and assess, confidentially, the going-concern operating results and the prospects for resolving any problems or areas of concern. The report page should be also used to discuss compliance problems relating to statutory, regulatory, or administrative provisions cited within the core or other open sections of the report. The potential for any improvement or weakening in economic conditions should also be discussed to the extent they have a bearing on earnings potential.

The specific information to be provided on the report page is—

1. information on the organization's near-future financial prospects, giving particular consideration to debt servicing and the likelihood of improving any current problems;

2. an assessment of holding company management as to the experience and qualifications of principal personnel when relative to the assessment, and a listing of subsidiary bank ratings, effective examination dates, and type and scope of examinations;

3. the examiner's concise assessment of management's oversight of the BHC's policies and supervision of subsidiaries with respect to the level of control and supervision exercised over subsidiaries (see sections 2010.0 to 2010.4) should be discussed (An evaluation of the bank holding company's recognition and control of exposure to risk should also be provided (see section 2160.0), as well as an evaluation of management information systems (MIS) based on the guidance found in sections 2060.0 through 2060.6.);

4. a discussion of the reasons for the component ratings and overall BOPEC rating assigned;

5. an analysis of chain banking organizational structure (The examiner must determine whether the BHC is a member of a *chain banking organization*. A chain banking organization may be defined generally as a collection of independent banking organizations that are controlled by the same individual, family, or a group of individuals closely associated in their business dealings.);

6. a listing of individuals or groups that control more than 5 percent of the BHC's outstanding stock (Discuss any significant changes in ownership. A review of ownership is to include a determination as to whether an individual or group of shareholders exercise significant influence over the BHC. It should also include a discussion of fiduciary holdings of the parent company's stock and convertible debt of the BHC's subsidiaries.);

7. a presentation of confidential information relating to the components of the BHC rating system, avoiding repetition by cross referencing report pages in the open section; and

8. examiners' comments on any other supervisory concerns or aspects of the BHC's condition warranting confidential treatment. Comments on any violation and/or a BHC's unsafe and unsound practice should be included with any recommendations for Federal Reserve administrative action. Any plans of the holding company which are considered to be of a confidential nature should also be discussed.

Financial-analysis comments on the bank holding company organization (that is, BOPEC components, not the ratings) that are not of a confidential nature are to be discussed on the Analysis of Financial Factors core page 4.

The date and type of examination and assigned rating can be obtained directly from the latest examination report of each subsidiary bank. The other information is to be derived from discussions with senior management.

The information pertaining to ratings (CAMELS) and ratios of the banks is to be presented in columnar form with the banks listed as they appear on the organization chart. Also include any comment on the bank(s) deemed to warrant confidential treatment.

The examiner is expected to review and use the examination ratings of the other federal agencies where appropriate; however, if substantive differences of opinion exist as to the bank's composite rating, adjustments to the rating may be made and footnoted accordingly.

The examiner should make certain that the bank names or abbreviations are consistent with the organization chart and other tables in the inspection report. Any ratios or comments used in the rating analysis should be checked to corresponding areas in the open section.

Procedures for Inspection Report Preparation (Confidential Page C—Liquidity and Debt Information) Section 5010.42

This page provides a ''snapshot'' picture of the parent company's short-term gap position as it relates to the amount of commercial paper compared to net short-term GAP within repricing maturity categories and also the cumulative GAP position within the maturity buckets. The page provides summary information of aggregate data from the ''Commercial Paper (Parent),'' ''Parent Company Liquidity Position'' and the ''Unaffiliated Borrowings'' pages or workpapers.

The lower portion of the schedule provides details on unaffiliated borrowings such as the amount and types of external indebtedness of the parent and its subsidiaries. Information regarding various debt covenants such as cross default clauses, collateral information and negative covenants can be included.

The purpose of the page is to aid in evaluating the company's ability to service its debt and to operate within the constraints of debt restrictive covenants. It also aids in evaluating the appropriateness of the uses of the proceeds of the organization's borrowings.

Information for the source report pages or workpapers required for an analysis of parent company liquidity, commercial paper and other short-term debt, and long-term unaffiliated borrowings should be requested in the officer's questionnaire or can be obtained from the BHC's accounting department. Totals should be brought forth from the ''Commercial Paper (Parent)'' and the ''Parent Company Liquidity Position'' pages or workpapers, or reconciled to the general ledger. Footnotes to financial statements in published reports contain much of this information.

For the commercial paper information, derive the totals from the total column on the ''Commercial Paper (Parent)'' report page, combining the totals for over 91 days maturity. Commercial paper maturity totals should be presented as a line item showing the aggregate outstanding balance netted by any amount held by subsidiaries.

For the ''Long-term Debt'' portion of the report page, present unaffiliated long-term borrowings in tabular form for (a) the parent, (b) each nonbank subsidiary, and (c) the bank subsidiaries (combined).

For the parent company and each nonbank subsidiary, show the borrower, lender, description of the debt, original amount, origination date, interest rate, maturity date, present outstanding balance, any significant repayment provisions, collateral, use of proceeds, major restrictive covenants and any requirements for compensating balances. In addition, mandatory convertible debt instruments of the parent should be identified and the conversion provisions detailed. In the case of large bank holding companies that have an extensive number of debt issues, detail for each issue may be eliminated at the discretion of the examiner so long as aggregates for similar issues are shown along with ranges for rates and maturities and summary information regarding the other terms of the debt.

For the ''Net GAP'' and ''Net Cumulative GAP'' use the respective total amounts (''Net Position'' and ''Cumulative Excess Deficiency)'' on the ''Parent Company Liquidity Position'' report page. Bank mortgage indebtedness may be aggregated at the discretion of the examiner, showing amounts only without other detail. Capitalized lease obligations may be included in that total. For all other bank borrowings, including debentures issued to unaffiliated sources, provide complete detail.

Debt amounts on this page should agree with those shown for the ''Parent Company Comparative Balance Sheet'' for Core Page 5, the ''Bank Subsidiaries'', the ''Nonbank Subsidiary Financial Statements'' pages or workpapers, and the ''Consolidated Comparative Balance Sheet'' Core page 8 (when adjusted to net intercompany borrowings).

Procedures for Inspection Report Preparation (Confidential Page D—Administrative and Other Matters) Section 5010.43

This report page summarizes the examiner participants and their total workdays devoted to the inspection and provides clarification on checklist items where appropriate. Other comments should be directed to planning arrangements affecting the scope of the inspection. When nonbank subsidiaries are inspected, describe the extent of the review of the records. The examiner should cite any special problems encountered which would aid future inspections. Recommendations, suggestions, and information needed to conduct the next inspection should also be included for the next Examiner-in-Charge.

Information regarding planning is limited to the on-site planning of the work to be performed. Comments should be of a professional nature and should be strictly devoted to providing information that can be used in planning and performing an inspection (location and access to specific BHC records, inspection control problems, availability of facilities for staff, key officer and director contacts, information pertaining to the Internal Audit Committee members, internal and external auditors, and etc.)

Information pertaining to the access to, and the storage of, workpapers and any personal information such as lodging, travel arrangements and geographical directions should be confined to the workpapers. Comments not directly related to the on-site conducting of the inspection should be avoided.

The purpose of the confidential report page is to present pertinent information to be used only by regulatory authorities. The page is reserved to summarize internal information derived from Reserve Bank inspection staff that would not be addressed in other confidential report pages. The information reported on this page may also be derived from discussions with senior bank management, workpapers, accounting records, board of directors' minutes, and etc.

Bank names or abbreviations should be consistent with the organization chart and other tables in the inspection report.

This report page presents financial statement data (a condensed balance sheet and income data) for one-bank holdings companies and other bank holding companies that may have assets of less than $150 million. Place the name of the bank at the top on the line provided. For multi-bank companies, the page may be completed for the lead bank or comparable lead banks and each bank requiring special supervisory attention. The balance sheet and income data should be obtained from the last two calendar year ends and the most recent report of condition, while the examination data should be obtained from the last three examination reports. Refer to 5010.30.

This inspection report page incorporates onto one page a comprehensive list of questions covering many areas of supervisory concern. The questions can be answered with a "yes" or "no," or a not applicable response ("N/A"). Detail is required on an exception basis. Provided below are some guidelines to consider for several of the listed questions. Many of the questions are self-explanatory. Some questions (e.g. questions addressing audit and insurance activities) duplicate topics covered by other work papers. The purpose of the duplication and format of the report page is to provide a cross-check within the inspection report to make certain that all relevant areas have been included in the report. If relevant comments have been provided on other report pages in the "open" section, the comments need not be duplicated on this report page. Only a reference to the other report page is needed.

5020.2.1 LEVEL OF CONTROL AND SUPERVISION EXERCISED OVER SUBSIDIARIES (QUESTION 1)

Consider:

1. Whether the subsidiaries operate autonomously;
2. The degree of overlap between BHC and bank management;
3. Who sets major policies of the corporation;
4. How the holding company monitors the operation of its subsidiaries;
5. The role of supervision by the parent over the subsidiary banks in formulating the holding company's budget, tax planning, investment policies, internal controls and audits;
6. The extent of control resulting from directors having dual roles and responsibilities at the parent and subsidiary levels; and
7. Whether problems resulting from unqualified directors carry over from the parent to the subsidiaries.

5020.2.2 DIVIDENDS FROM SUBSIDIARIES (QUESTION 2)

Consider:

1. The policy for paying dividends in relation to the earnings and capital needs of the subsidiary. For banks the examiner should rely on the most recent examination report of the federal supervisor; however an independent conclusion must be made.
2. The reasonableness of the parent company's policy for assessing dividends from the subsidiary banks and whether it is being complied with.

5020.2.3 REPRESENTATIONS MADE IN APPLICATIONS TO THE BOARD (QUESTION 3)

Consider:

1. Whether the holding company has complied with all representations and agreements made with the Board. If no such agreements or representations have been made, state not applicable (N/A). The examiner should review transmittal letters for commitments associated with approved applications since the last full scope inspection. The supervisory file maintained by management at each bank holding company should also be reviewed for such agreements or representations.
2. Whether correspondence has been initiated with the appropriate Reserve Bank that provides an appropriate explanation as to why those representations and agreements have not been adhered to.
3. Whether the holding company is complying with any Reserve Bank reply to the holding company's notification.

5020.2.4 COMPENSATING BALANCES (QUESTION 4)

1. If a subsidiary bank is not adequately compensated for maintaining compensating balances at another institution for debt advances to the holding company, provide:
   a. The average collected and book balance or the range of the balance;
   b. Any arrangement whereby the loan or line of credit agreement between the creditor bank and parent contains a requirement to maintain a correspondent account; and
   c. Comments as to whether the subsidiary bank is reimbursed for maintaining the compensating balance.
2. Refer to Manual section 2020.4.

5020.2.5 MANAGEMENT AND OTHER SERVICES PERFORMED FOR SUBSIDIARIES (QUESTION 5)

If applicable, describe the holding company's policy on assessing management and services fees for work performed for the subsidiary bank. Provide comments as to whether the policies and fees are reasonable, and if not, why not. When answering this question, refer to Manual section 2020.6.

The examiner's comments should cover the following: (a) terms of the management or other service agreement or contract, if any, including the basis for charging fees, and the dates of adoption and expiration; (b) whether the boards of directors of each company have approved the agreement or contract; (c) description of the service, personnel providing the service, and whether the personnel are on the subsidiary bank's payroll; (d) conclusion on whether the services are actually being performed as stated and reasonableness of fees charged.

For multi-bank holding companies, the examiner should expand his comments to cover the role of supervision by the parent over the subsidiary banks, their lending and investment policies, budgeting and tax planning, and internal controls and audits.

5020.2.6 INTERCOMPANY TRANSACTIONS (QUESTION 6)

Review parent and nonbank subsidiary borrowings, including overdrafts from the subsidiary bank(s), for the past year and comment on significant transactions. If any extension of credit to affiliates by a bank or other transaction is deemed to violate section 23A or 23B of the Federal Reserve Act, so state. See Manual section 2020.1.

Describe any arrangement whereby the parent or nonbank subsidiary has purchased/sold significant participations or any other assets from/to a subsidiary bank. Also, discuss material transactions not discussed elsewhere in the report.

5020.2.7 INSIDER TRANSACTIONS (QUESTION 7)

Consider:

1. The policy in regard to extensions of credit by a bank holding company or its nonbank subsidiaries to the BHC officials (executive officers, directors or ''more than 10 percent'' shareholders) or the BHC officials' interests in the organization;
2. Prohibitions on bank extensions of credit contained in the Financial Institutions Regulatory and Interest Rate Control Act of 1978; and
3. Whether the bank holding company has a conflict of interest statement or business ethics policy that has been distributed to employees.

If there are insider transactions subject to comment, list the parent and nonbank subsidiary extensions of credit to BHC officials. Also, comment on the compensation to the officials. See Manual sections 2050.0, 2110.0, and 5010.36.

5020.2.8 TAX ALLOCATION (QUESTION 8)

See Manual sections 2070.0.

5020.2.9 USE OF SUBSIDIARY BANK PERSONNEL, OR ASSETS TO SELL CREDIT RELATED LIFE INSURANCE TO THE BANK'S CUSTOMERS (QUESTION 9)

This question refers to the Board's May 1981 policy statement on the disposition of income from the sale of credit life, health and accident, and mortgage life insurance (credit life insurance) related to loans made by state member banks. A reasonable amount of compensation must be paid to the state member bank in recognition of the role played by its personnel, premises, and goodwill in credit life insurance sales. As a general rule ''reasonable compensation'' means an amount equivalent to at least 20 percent of the affiliate's net income attributable to the financial institution's credit life insurance sales.

At the time of the Board's adoption, the policy was recommended for adoption by the other federal bank regulatory agencies thru the Federal Financial Institutions Examination Council. Therefore, the question is applicable to all banking subsidiaries, not just state member banks. If reasonable compensation is not being received by any or all subsidiary banks. Comment on this subject only when the parent or nonbank subsidiary receives income from the sale of insurance directly related to extensions of credit by a bank subsidiary. Describe any arrangement between the subsidiary bank(s) and the parent or nonbank affiliate concerning the sale of insurance directly related to extensions of credit. Note whether and/or when such arrangement was formally approved by the subsidiary bank's board of directors. Describe the manner of disposition of such insurance income. In situations where the subsidiary bank provides personnel and/or facilities for the sale of credit related insurance but receives no income, the bank, as a minimum, must be reimbursed for out-of-pocket costs.

5020.2.10 TIE-IN ARRANGEMENTS (QUESTION 10)

See Manual section 3500.0.

5020.2.11 LITIGATION (QUESTION 11)

If the holding company or its subsidiary(ies) is a defendant in any litigation, the results of which could have a significant adverse effect on the overall organization, provide details of the lawsuit, including, if possible, the opinion of the holding company's counsel as to the possible outcome of the suit. As a general guideline, include only suits representing more than 10 percent of the holding company's stockholder's equity capital.

5020.2.12 INSURANCE PROGRAM (QUESTION 12)

See Manual section 2060.5.

5020.2.13 AUDIT PROGRAM (QUESTION 13)

See Manual section 2060.1.

5020.2.14 INTERNAL LOAN REVIEW (QUESTION 14)

See Manual section 2060.6.

5020.2.15 ACCURACY AND TIMELINESS OF REPORTS (QUESTION 15)

If reports filed with the Federal Reserve (e.g. the FR Y–6 Annual Report) are not filed accurately and/or on time, provide comments as to the holding company's plans for correcting the problem. Any changes in accounting to conform with generally accepted accounting principles, as required by FR Y–6, should be discussed here.

5020.2.16 OUTSTANDING COMMITMENTS TO THE BOARD OF GOVERNORS (QUESTION 17)

If the holding company has outstanding commitments to the Board, summarize the commitments by describing the nature of the commitment, the date the commitment was made, and if applicable, the time frame in which it must be fulfilled. If the time frame has expired, or if an extension is deemed necessary to fulfill the commitment, details must be presented. The examiner may choose to make a reference to the unfulfilled commitment on the ''Examiner's Comments'' page 1, if considered appropriate.

5020.2.17 OTHER MATTERS HAVING A DETRIMENTAL IMPACT (QUESTION 18)

Discuss here any other matter having a detrimental impact upon the subsidiary bank(s) not discussed elsewhere in this report, and deemed pertinent by the examiner. Examples of some subject areas to be considered might be:

1. Public debt issues and commercial paper liabilities of the parent or nonbank subsidiary.

Comment on the following items where appropriate:

(1) Describe the debt instrument, including amount, interest rate, maturity, purchasers, and use of proceeds; (2) agency ratings; (3) determine whether any subsidiary (particularly a bank) sells the debt issue for its own use or on behalf of the parent and make critical comments whenever the issue does not clearly state that the issue is not an insured obligation of a bank subsidiary; (4) discuss any difficulties experienced in refinancing the debt; and (5) if a line of credit is used to back up a short term issue, indicate the lending bank, credit line, amount in use, expiration date, and required fee or compensating balance maintained by a subsidiary bank, if any, and whether the bank is being remunerated by the parent or nonbank affiliate. (See Manual section 5010.23.)

2. Adequacy of recordkeeping of the holding company, including nonbank subsidiaries. If

included, recommendations concerning the adoption of minimum recordkeeping standards should be presented and justified.

3. Contingent liabilities or violations not addressed elsewhere in the report (such as treasury stock purchased in violation of Regulation Y).

4. Payment of cash dividends in excess of net earnings available for common shareholders over the past year and the rate of earnings retention is not consistent with the organization's capital needs, asset quality, and overall financial condition.

5. Adverse relationships not elsewhere mentioned, such as inappropriate allocation of income and expenses of a nonbank activity performed by subsidiary bank employees.

AUDIT PROGRAM

Comment on the adequacy and the effectiveness of the holding company's audit program, including scope and frequency of audits of subsidiaries, and the relationship with the holding company's accounting firm. Identify to whom the auditor is responsible and who receives the audit reports. Describe the nature of any ''qualified opinion'' submitted by the independent auditors in certifying the most recent year's financial statements and any pertinent comments regarding relations with the directors' audit committee. If the holding company does not have its own audit staff, describe the role of the internal audit staffs of the subsidiaries, and the role of the independent accounting firm of the holding company, and state if such arrangements are adequate.

CAPITAL RATIOS AND TRENDS:

	Peer Data December 31, 19x1	As of December 31, 19x1	December 31, 19x0	December 31, 19x9
Tier 1 capital ratio:[2] Year-end 1992 rules	%	%	%	N/A %
Total capital ratio: Year-end 1992 rules	%	%	%	N/A
Tier 1 leverage ratio[3]	%	%	%	N/A
Tangible leverage ratio[4]	%	%	%	N/A

1. Risk-weighted balance sheet assets excludes all goodwill, net unrealized loss in marketable equity securities, investments in unconsolidated banking or financial subsidiaries, and reciprocal holdings of capital.
2. The Tier 1 capital ratio is calculated by deducting ½ of all investments in unconsolidated banking or financial subsidiaries from Tier 1 capital and dividing the remaining amount by risk-weighted assets. If there is insufficient Tier 2 capital from which the other half of the investments in unconsolidated banking or financial subsidiaries would be deducted, then also deduct the deficient amount from Tier 1 capital.
3. The Tier 1 leverage ratio is calculated by dividing Tier 1 capital (as defined by the final capital guidelines, effective December 31, 1992) by average total assets (for the most recent quarter) less all goodwill.
4. The tangible leverage ratio is calculated by deducting all intangibles from Tier 1 capital and dividing by average total assets (for the most recent quarter) less all intangibles.

POLICIES AND SUPERVISION

Discuss and appraise the parent company's policies with respect to:

The level of control and supervision exercised over subsidiaries.

Dividends and fees from subsidiaries.

Loans and investments of subsidiaries.

Risk evaluation and control.

Funds management and the adequacy of existing policies.

Management information systems.

Loan participations by and between subsidiaries.

Internal loan review.

FIXED CHARGE COVERAGE RATIO:			
$\dfrac{(1)+(2)+(3)}{(2)+(3)+(4)+(5)}$			
COMMON STOCK CASH DIVIDEND COVERAGE RATIO:			
$\dfrac{(1)-[(4)+(5)]}{(6)}$			

1. Are the parent company's fixed charges covered by its cash earnings? What is the amount of excess or deficiency?
2. Are the parent company's dividend payments to stockholders covered by its residual cash earnings? What is the amount of excess or deficiency?
3. Giving full consideration to the requirements for loan loss reserves and capital structure of the bank and the major nonbank subsidiaries:
   (a) Is the present level of dividends paid by the bank and the major nonbank subsidiaries to the parent company sustainable?
   (b) What is the scope for increasing the cash flow to the parent company?
4. If cash flow is insufficient to cover fixed charges and cash dividend payments, discuss the steps management has taken, or plans to take, to restore adequate cash earnings coverage. Include comments on whether such plans would be commensurate with the maintenance of adequate loan loss reserves and capital levels in the bank and the major nonbank subsidiaries.
5. If cash flow is insufficient to cover cash dividend payments, should the parent company revise its dividend policy to conform to the Board's guidelines on the payment of cash dividends?
6. Discuss significant cash flow transactions as deemed appropriate by the examiner.

TREASURY ACTIVITIES/CAPITAL MARKETS
(FR 1225)

1. Provide an overview of the organization's capital markets activities. The overview should distinguish between various types of functional activity, such as market making, trading, or end user, and include a relevant measure of volume for the activity as well as earnings performance.

2. Does the organization maintain written policies and procedures that clearly outline the process for controlling risks inherent in the organization's functional activities? Describe where policies and procedures are deficient.

3. Does the organization have a written overall strategy covering all capital markets activities? ____ Explain.

4. Has this strategy been effectively communicated to the Board of Directors? ____ Explain.

5. Does the organization have risk-management processes in place to manage and control all significant risk exposures (e.g., market, credit, operations, liquidity, and legal-risk exposures)? ____ Can the organization manage and control risks on a consolidated basis? ____ Explain.

6. Specifically, describe how the organization measures and manages the market-risk exposures related to these activities. Is this process adequate given the complexity and size of the activities as well as the capital position of the institution? ____ Explain.

7. Also describe how the organization measures and manages both the current and potential credit-risk exposures related to these activities. Is this process adequate given the complexity and size of the activities as well as the capital position of the institution? ____ Explain.

8. Does the organization have management information systems to provide accurate and timely information to senior management and the board of directors?

9. Are internal control processes sufficient to ensure safe and sound operations? ____ Explain.

10. Does the organization have an audit plan for capital markets activities? ____ Is it Adequate? ____ Explain.

OTHER SUPERVISORY ISSUES
(FR 1241)

1. Comment on the extent of control the holding company exercises over the policies of the subsidiary bank. ____ .
2. Is the holding company's policy on assessing dividends from the subsidiary bank(s) reasonable and is it being complied with? ____ .
3. Has the holding company complied with all representations made in application(s) to the Board of Governors? ____ .
4. Does the subsidiary bank(s) maintain compensating balances at another institution for debt advanced to the holding company? ____ .
5. If applicable, describe the holding company's policy on assessing management and service fees for work performed for the subsidiary bank. Are policies and fees reasonable? ____ .
6. Are there any intercompany transactions subject to comment? ____ .
7. Are there any insider transactions subject to comment? ____ .
8. Do the holding company's intercorporate income tax accounting policies and practices conform with the Board of Governors' September, 1978 policy statement? ____ .
9. If the holding company uses a subsidiary bank's personnel, or assets to sell credit related life insurance to the bank's customers, does the holding company give the bank reasonable compensation for its services in compliance with the Board of Governors' policy statement of May, 1981? ____ .
10. Is the holding company in compliance with the tie-in prohibitions contained in Section 106(b) of the BHC Act Amendments of 1970? ____ .
11. Is the holding company or its subsidiary(ies) a defendant in any litigation the results of which could have a significantly adverse effect on the overall organization? ____ .
12. Is the insurance program for the holding company organization considered adequate? ____ .
13. Is the holding company's audit program considered adequate? ____ .
14. Is the holding company's credit quality review program considered effective? ____ .
15. Are reports filed with the Federal Reserve System prepared accurately and submitted on a timely basis? ____ .
16. Did the inspection uncover any violation of law, regulation or Federal Reserve policy statement not cited above? ____ .
17. Does the holding company have any outstanding commitments to the Board of Governors? ____ .
18. Is there any other matter having a detrimental impact on the subsidiary bank(s) not discussed elsewhere in this report?____ .

5040.0.1 OBJECTIVES

The limited-scope inspection will review all areas of activity covered by a full-scope inspection report but less intensively.

5040.0.2 IMPLEMENTATION GUIDELINES

The ultimate responsibility for determining the appropriateness of the limited scope, and the actual elements of the scope of the inspection beyond the guidelines, rests with the Reserve Bank.

Certain report pages are required to be included in the limited-scope inspection. Other pages are required when certain events trigger their applicability, "exception (E)" pages. Pages not required may be included at the Reserve Bank's option. These are labeled as "optional" pages.

5040.0.2.1 Required Report Pages

As in the full-scope inspection report,[1] the limited-scope inspection report is divided into three parts: a core section, a section consisting of report pages that provide support to the core section, and a confidential section.

Core section. The core section of the report serves as the main vehicle for communicating the results of the inspection to management. The core pages contain the scope of the inspection, comments on administration of policies and supervision over subsidiaries, and an analysis of the BOPEC components, any or all of which could be used to support supervisory action, when necessary.

Support section. The supporting report pages contain narrative and financial and other data to support the analyses in the core section. The *required* pages provide the primary statistical support when addressing important supervisory problems or issues, and as appropriate, the BOPEC rating, or supervisory action, when needed.

Confidential section. The pages in this section are also required since they address matters of supervisory importance and other matters not deemed appropriate in the open section.

For a limited-scope inspection, the following report pages are *required:*

Manual Section No.	*Page Location*	*Page Title*
5010.2		Cover (FR 1427)
5010.3	Page i	Table of Contents
5010.4	Core Page 1	Examiner's Comments
5010.5	Core Page 2	Scope of Inspection
5010.41	Confidential Page B	Condition of the BHC

The Directors' Summary Report will be required as in the full-scope inspection. Appropriate information provided by other reporting vehicles, inspection/examination activities or other financial institution regulatory agencies should be considered. Refer to footnote #3 for further guidance as to the need for a Directors' Summary Report.

1. The basis for the limited-scope inspection report will be the "large" report, FR 1225.

5040.0.2.2 Exception Limited-Scope Report Pages

The following ‘‘exception (E)’’ pages should be included in the report as indicated below:

Manual Section No.	*Page Location*	*Page Title*
5010.6	Core Page 3	Structure and Abbreviations
5010.7	Core Page 4	Analysis of Financial Factors
5010.10	Core Page 7	Summary of Consolidated Classified and Special Mention Assets, and Other Transfer Risk Problems
5010.11	Core Page 8	Consolidated Comparative Balance Sheet
5010.12	Core Page 9	Comparative Statement of Income and Expenses (Consolidated)
5010.13	Core Page 11*	Capital Structure (Consolidated)[2]
5010.14	Page	Policies and Supervision
5010.15	Page	Violations
5010.16	Page	Other Matters
5010.17	Page*	Classified Assets and Capital Ratios of Subsidiary Banks
5010.19	Page*	History and Structure
5010.27	Page	Cash Flow Statement (Parent)
5010.28	Page	Parent Company Liquidity Position
5010.29	Page*	Parent Company and Nonbank Assets Subject to Classification
5010.31	Page*	Nonbank Subsidiary
5020.2	Page	Other Supervisory Issues
5010.40	Confidential Page A*	Principal Officers and Directors
5010.43	Confidential Page D	Administrative Matters

Pages with an (*) are optional if the limited-scope inspection is preceded by a full-scope inspection within the same annual period.

2. The corresponding FR 1241 page may be used if the basis is to be a lead bank subsidiary rather than on a consolidated position.

5040.0.2.2.1 Reasoning for Including ‘‘E’’ Pages

The ‘‘E’’ pages are included when the activities are present, or have been disclosed through the inspection process, or when significant findings or issues must be reported and communicated to management or to the appropriate supervising agency(ies). The limited-scope inspection report may include, at the discretion of the appropriate Reserve Bank, copies of the Bank Holding Company Financial Statements (FR Y-9) and Reports of Condition of Subsidiary Banks in place of pages containing required or optional financial statements. The FR Y-9 statements or the Reports of Condition should only be included when the financial statements accurately represent the condition of the bank holding company as determined during the inspection.

5040.0.2.3 Optional Limited-Scope Report Pages

In the limited-scope inspection, several pages have been labeled as optional because of the nonexistence of an activity or the absence of a problem in that area. Any inspection report page may be included in the report at the option of the Reserve Bank or the examiner-in-charge. Note that the ‘‘Commercial Paper’’ and related pages (5010.21 through 5010.23) are optional since the existence of this activity would be a ‘‘complex’’ organization, requiring a full-scope examination within the same annual period.

The *optional* pages are:

Manual Section No.	*Page Location*	*Page Title*
5010.8	Core Page 5	Parent Company Comparative Balance Sheet
5010.9	Core Page 6	Comparative Statement of Income and Expenses (Parent)
5010.18	Page	Organization Chart
5010.20	Page	Investment in and Advances to Subsidiaries
5010.21	Page	Commercial Paper (Parent)
5010.22	Page	Lines of Credit (Parent)
5010.23	Page	Commercial Paper and Lines of Credit (Parent)
5010.24	Page	Contingent Liabilities and Schedule of Balance Sheet Accounts Not Detailed Elsewhere (Parent)
5010.25	Page	Statement of Changes in Stockholders’ Equity
5010.26	Page	Income from Subsidiaries (Fiscal and Interim)
5010.30	Page	Bank Subsidiaries
5010.32	Page	Nonbank Subsidiary Financial Statements and Condition
5010.33	Page	Fidelity and Other Indemnity Insurance
5010.34	Page	Audit Program
5010.37	Page	Interest Rate Sensitivity—Assets and Liabilities
5010.42	Confidential Page C	Liquidity and Debt Information

5040.0.3 LIMITED-SCOPE INSPECTION PROCEDURES

Procedure:	Complete FR 1417 and indicate that the scope was limited (‘‘L’’).
Nature of Inspection:	Disclose on the ‘‘Scope of Inspection’’ page that the scope is limited including any additional procedures utilized for a certain area or activity during the inspection that might be comparable to a full-scope inspection.
Directors’ Summary:	Required under the same conditions as in the full scope.[3]
Rating:	Assign BOPEC rating as appropriate. Indicate under what circumstances the rating was assigned and what components were changed, including the reasons why they were changed.
Inspection Cover:	Cover will designate ‘‘limited’’ scope (FR 1427) and will be a designated color other than the full-scope reports.

3. Should generally be prepared in accordance with the requirement for the preparation of written reports to directors summarizing the examination finding following a full-scope examination. Reserve Banks that have previously identified the problems and provided a report to the directors are not required to prepare the summary for the limited-scope inspection.

5040.0.4 LIMITED-SCOPE INSPECTION REPORT COVER (FR 1427)

FR 1427–Cover
(Revised 7/94)

REPORT OF BANK HOLDING COMPANY INSPECTION

(Limited Scope)

Name: ____________________

Location: ____________________

RSSD ID Number: ____________________

Inspection Commenced: ____________________

Inspection Concluded: ____________________

Inspection Date: ____________________

THIS REPORT OF INSPECTION IS STRICTLY CONFIDENTIAL

This report has been prepared by an examiner selected or approved by the Board of Governors of the Federal Reserve System. The report is the property of the Board of Governors and is furnished to directors and management for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 USC 1817(a) and 1831m) and in the regulations of the Board of Governors (12 CFR 261.11). Under no circumstances should the directors, officers, employees, trustees or independent auditors disclose or make public this report or any portion thereof except in accordance with applicable law and the regulations of the Board of Governors. Any unauthorized disclosure of the report may subject the person or persons disclosing or receiving such information to the penalties of Section 641 of the U.S. Criminal Code (18 USC 641). Each director or trustee, in keeping with his or her responsibilities, should become fully informed regarding the contents of this report. In making this review, it should be noted that this report is not an audit, and should not be considered as such.

FEDERAL RESERVE BANK OF

5050.0.1 OBJECTIVES OF A TARGETED INSPECTION

A targeted inspection is designed to focus intensively on one or more specific areas, activities, or problems relating to a bank holding company. Such inspections may be conducted for various reasons, including serving as a complement to an annual full-scope inspection.[1] Targeted inspections are conducted as directed by the System or at the discretion of the individual Reserve Banks. As a minimum, the inspection procedures used are comparable to a full-scope inspection.

1. FR 1225 will serve as the basis for a targeted inspection.

Report Pages Included:	Cover (FR 1428)
	Table of Contents for included pages and a key for abbreviations used in the report
	Examiner's Comments
	Scope of Inspection
	Other report pages supporting the scope, and the nature of the targeted inspection, as deemed appropriate by the Reserve Bank and the examiner-in-charge.
	Confidential pages consisting of confidential page B, "Condition of the Bank Holding Company," and confidential page D, "Administrative Matters."
Nature of Inspection:	Disclose on the "Scope of Inspection" that the scope is targeted and describe the procedures utilized for the targeted areas or activities.
Directors' Summary:	Required as prescribed in the full scope.[2]
Rating:	A new BOPEC *composite rating* of 1 through 5 would only be assigned if the bank holding company inspection results provide sufficient information to either reaffirm or modify the most recently assigned BOPEC composite rating. At least one component area must be rated between 1 and 5 in order to assign a new composite rating; otherwise a composite rating of 0 should be assigned.

2. Should generally be prepared in accordance with the requirement for the preparation of written reports to directors summarizing the examination finding following a full-scope examination. Reserve Banks that have previously identified the problems and provided a summary report to the directors are not required to prepare the summary for the targeted examination.

5050.0.2 TARGETED INSPECTION REPORT COVER (FR 1428)

FR 1428–Cover
(Revised 7/94)

REPORT OF BANK HOLDING COMPANY INSPECTION (Targeted Scope)

Name: ______________________

Location: ______________________

RSSD ID Number: ______________________

Inspection Commenced: ______________________

Inspection Concluded: ______________________

Inspection Date: ______________________

THIS REPORT OF INSPECTION IS STRICTLY CONFIDENTIAL

This report has been prepared by an examiner selected or approved by the Board of Governors of the Federal Reserve System. The report is the property of the Board of Governors and is furnished to directors and management for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 USC 1817(a) and 1831m) and in the regulations of the Board of Governors (12 CFR 261.11). Under no circumstances should the directors, officers, employees, trustees or independent auditors disclose or make public this report or any portion thereof except in accordance with applicable law and the regulations of the Board of Governors. Any unauthorized disclosure of the report may subject the person or persons disclosing or receiving such information to the penalties of Section 641 of the U.S. Criminal Code (18 USC 641). Each director or trustee, in keeping with his or her responsibilities, should become fully informed regarding the contents of this report. In making this review, it should be noted that this report is not an audit, and should not be considered as such.

FEDERAL RESERVE BANK OF

A management information system (MIS) can be described as an automatic data processing system designed to aid in the performance of management functions. The MIS system is used in the decision-making process, which facilitates the collection and presentation of information to plan, organize, and control activities within the confines of the organizational culture. MIS encompasses the policies, procedures, and internal controls pertaining to management reporting which provide the information needed by the board to monitor and ensure control of operations and activities. MIS supports all levels of the organization in the execution of their duties—from the board of directors down to the lowest level of management within the company. A successful MIS will support the strategic direction of the company and promote the process by which decisions are made.

The objective of a targeted MIS inspection is to determine if the corporation has in place a management information system which is capable of providing its board of directors and senior management committees with sufficient, reliable, and timely data from which informed decisions can be made to monitor and manage risks. As a result, the targeted inspection uses a ‘‘top-down’’ approach, which focuses on the information used by the board and senior management committees and on the overall MIS architecture. For further inspection guidance, see the MIS sections 2060.0 to 2060.5 and SR-95-45 and its exhibits. The MIS supporting other levels of management should be reviewed during subsequent bank holding company inspections.

A targeted MIS inspection should be performed in companies in which there has been a notable alteration in the risk profile or aggressive expansion, or in which significant changes in information systems have occurred. This will ensure that executive management and the board have taken into consideration MIS and its ability to keep up with the changes in the organization. It should be noted that there is no one management reporting system. Depending on the structure of the organization, the activities that it engages in, the risk profile that results, and the technological environment that it operates under, MIS will be different in each bank holding company.

A key element of a successful MIS is the creation of the necessary technological support system. Since MIS is the primary tool for executive management and the board to monitor risk and measure performance, it is vital that the generated reports are accurate, provide sufficient information, and address all areas of the organization. Thus, data integrity is a key factor in analyzing the MIS process; inaccurate data can lead to faulty conclusions by management and the board. In addition, information flows to the top level of the organization should be comprehensive enough to allow for informed decisions. An overload of trivial information can cause confusion and slow the decision-making process.

The MIS inspection process focuses on three broad areas:

1. Relevance and Use of MIS
   - overall risk assessment of the corporation
   - identification of risk responsibilities and reporting lines within the organization
   - evaluation of the quality and relevancy of MIS reports
2. Internal Controls over MIS Integrity
   - identification of information flows and internal control points
   - evaluation of internal controls over information flows
   - evaluation of the report-development process and contingency plans
3. MIS Architecture and Planning
   - analysis of corporate strategic and technology plans, and the effect of their interrelationship on MIS
   - identification of the system architecture, including planned enhancements, and its effect on MIS
   - evaluation of the capability of system architecture to assimilate acquired organizations and the subsequent effect on MIS

The targeted MIS inspection evaluates the information flows to senior management and the computer or manual systems which support them. Bank holding company inspections place emphasis on reports generated by MIS rather than on the process by which they are created.

Management information systems are made up of various subsystems and will generally be unique to the organization. MIS will be influenced by the structure of the organization, its activities, its risk profile, and its technological capabilities. The targeted MIS inspection guidelines and procedures focus on the three broad areas outlined above and provide examiners with guidance on how to evaluate a bank holding company's MIS process.

5052.0.1 RELEVANCY AND USE OF MIS

Management information requirements will be determined by the size and complexity of an organization's operations. As an organization grows in size and its operations become more complex, management must recognize that information needs change. In addition, strategic goals may dictate a change in the focus of the company, requiring revisions in data collection and presentation. Guidelines and requirements for reports that flow to executive management and the board should be established, recognizing, however, that different levels of the organization have different informational needs.

The effectiveness of MIS has to be analyzed in terms of its ability to assist executive management and the board in identifying, monitoring, and controlling risks throughout the organization. Reports should be analyzed for quality, timeliness, and consistency. They should provide coverage of the major areas in the institution and communicate information clearly and concisely. An organization might have a comprehensive MIS, but if pertinent information is not flowing to executive management and the board of directors, the system is not effective.

Information must be presented in a summarized form, which is easy to read and understand. Procedures must be in place to allow for rapid collection and assimilation of data allowing for timely presentation to executive management and the board. The presentation of data should be consistent from one period to another to avoid any undue confusion. Changes in format need to be agreed on by all users of the report before implementation. Data should cover all areas of risk within the organization and provide comparisons to enable executive management and the board to measure performance.

An assessment of the executive management committee and board members should be performed. A review of reporting lines should also be performed. (See section 2060.4.)

5052.0.2 INTERNAL CONTROLS OVER MIS INTEGRITY

The review of data integrity of reports to the board of directors and executive management committee is essential to ensure that information flows are accurate and that reports are consistently prepared. For each report reviewed, the flow of information through MIS must be identified, including computer platforms, applications software, and interrelationships with other computer systems. Controls such as data entry and modification, data security, disaster recovery, back-up, and program changes should be assessed. Any points in the system where manual intervention occurs should be identified, and information on the flexibility of the system should be obtained.

The procedures used to assess the data integrity controls will vary depending on the nature of the computer platform and application software and on the amount of manual intervention required to produce the report. However, in all cases, the assessment of MIS data integrity controls should begin with a review of the results of prior inspections and the result of internal and external audit reports. Previously identified deficiencies that have not been corrected can affect the integrity of current data.

Reports produced by a mainframe application system should have controls within the mainframe environment and in the application system used to produce the report. These controls are reviewed during EDP examinations and periodic EDP audits. These examination and audit reports should be used as leverage during the MIS inspection, and the current status of deficiencies noted should be ascertained through discussions with internal auditors and management.

Reports may also be produced by personal computers using spreadsheet and other office-product software in a distributed processing environment. Reviews of distributed processing systems require interviews with the persons responsible for preparing the reports. Any instances of manual intervention in such an environment must be identified and evaluated. The most recent EDP examination report should also be reviewed for any deficiencies noted in the bank holding company's microcomputer policies and procedures. A review of internal audit reports for the applicable business area and discussions with audit personnel will reveal whether this PC/spreadsheet application has been audited recently.

5052.0.3 MIS ARCHITECTURE AND PLANNING

The business plan and the computer system's architecture plan should be designed to complement each other and must support the strategic plan. The business plan identifies the goals, target markets, and areas of risk of the organization. The architecture plan describes the corporate technological plans for implementing the systems that will achieve the strategic and business goals, and it should include MIS.

Information is a valuable corporate asset. In a competitive banking environment, the ability to effectively manage this asset is crucial to a bank holding company's ability to remain competitive, introduce new products and services, and achieve desired goals. Therefore, the computer system's architecture plan should be developed in conjunction with its business plan. The architecture plan should ensure that mainframe processing and MIS are appropriately integrated and in place for the banking organization to achieve its strategic goals.

The dynamic and competitive banking and technology environments make effective planning critical. Reconcilement of the business and computer system's architecture plans is necessary to determine the effectiveness of the banking organization's planning process. With the proliferation of mergers and acquisitions in the financial industry, this process becomes more complicated. It is essential that management have a clear vision of its strategic and business goals and the technology required to achieve them if it is to effectively manage the divergent technologies that may be inherited through mergers and acquisitions. Bank holding companies in this situation should decide which acquired systems will survive. Documentation should support management's decision, and formal conversion plans should be documented. Telecommunications, compatibility of systems, data integrity, capacity, contingency planning, and data security are especially critical in this situation and should be evaluated in the planning and conversion process.

Ultimately, the business and the computer system's architecture plans should support the strategic plan. If these plans do not complement one another, the ability of management to achieve its goals may be difficult.

5052.0.4 INSPECTION OBJECTIVES

1. To review the organizational structure to determine the various levels of decision-making and reporting lines, risk assessment, and controls, including board and executive management committees.
2. To assess the adequacy of the management reports generated for their timeliness, quality, accuracy, and coverage of crucial areas.
3. To evaluate reports in terms of their ability to measure the company's progress in meeting its financial and business goals, including the capability to produce forecasts using various scenarios.
4. To evaluate management procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by the MIS, and the system's ability to adapt to change caused by regulatory and accounting issues or by other market conditions.
5. To determine if the policies, practices, procedures, and internal controls regarding management information systems and management reporting are adequate.
6. To evaluate the controls in place to ensure the integrity of the information within MIS, including data security, disaster recovery, and the system's development life cycle.
7. To determine if the functions of automated systems, reconcilement procedures, and reporting processes are completely understood by staff and that these functions are fully documented.
8. To ensure that an architecture plan exists that includes MIS and that it supports the business and strategic plans.
9. To determine if a management process exists for MIS planning, including organizational responsibility, development, and implementation.
10. To determine if a strategy exists for an effective consolidation of systems in the event of a merger or acquisition.
11. To recommend enhancements and/or corrective action when policies, practices, procedures, internal controls, or MIS are deficient.

5052.0.5 INSPECTION PROCEDURES

5052.0.5.1 General

1. Present the first-day request letter to executive management well in advance of the targeted inspection commencement date, allowing sufficient time for data collection (e.g., at least two weeks before). (See SR-95-45, exhibit A, for a sample first-day letter.) The examiner-in-charge should review the responses well in advance of the start of the inspection.
2. Solicit the cooperation of key senior officials

in organizing and conducting a meeting to discuss with them the identification, control, and reporting of identified risks within the various key operating areas of the bank holding company. Request that key senior management officials make or arrange for presentations during this meeting that will identify the major departments, functions, and activities within the organization and how MIS is used to identify and manage risk. (See SR-95-45, exhibit B.)
3. Draft the inspection report for participating examiners to review before the close of the on-site phase of the inspection, ensuring the inclusion of all relevant findings.

5052.0.5.2 Relevancy and Use of MIS

1. Review the organizational structure to determine reporting lines and the various levels of decision making, risk assessment, and controls. Determine if there are any corporate policies specific to risk management or internal reporting requirements.
2. Review the board and executive management committee structure, including its membership, mission, and authority and the experience levels of the members.
3. Read board and committee minutes and obtain sample copies of the board and committee packets.
4. Obtain a listing of internal reports that are submitted to corporate executive management and the board of directors. Ask that copies of each of these *top-level* reports be attached to the listing.
   a. Review each listed report for timeliness, clarity, completeness, relevancy, and measurability.
   b. Analyze the management reports for information sufficient to measure the company's progress in meeting its financial and business goals, including the ability to produce various forecasting scenarios.
5. Identify management procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by MIS. Evaluate the system's ability to handle regulatory and accounting issues and to adapt to change.
6. Discuss the examiners' perceptions of MIS reports with executive management as to their timeliness, clarity, completeness, relevancy, and measurability.

5052.0.5.3 MIS Integrity and Internal Controls

1. Review and analyze any policies, procedures, and practices governing the corporation's MIS, including descriptions of existing controls to ensure data integrity throughout the system, disaster-recovery plans, and standardized procedures for the development and use of systems and applications.
2. Review the architecture of MIS. Determine whether there is a single MIS system or a number of related systems. Ascertain if MIS is produced by the mainframe, distributed processors, personal computers, or a combination of these systems. Identify the databases in use for MIS reporting.
3. For each board and executive management report identified, review and verify the flow of data through MIS to the reports, include all computer platforms and application software used. Identify risk points and the controls in place to ensure data integrity. (See SR-95-45, exhibit C for a suggested format.)
4. For each report, verify the controls over data input and the report-distribution process. Determine that sufficient controls are in place to reasonably ensure the accuracy and confidentiality of the data.
5. Review all internal and external audit, regulatory examination, and outside consultant reports concerning MIS since the previous inspection. Note any deficiencies and/or recommendations, and determine whether management has taken appropriate corrective action. Perform follow-up action on any unresolved issues.
6. Through discussions with management and other personnel, determine if any significant changes to MIS are planned. If so, obtain and document the details and analyze their potential effect on MIS integrity.

5052.0.5.4 MIS Architecture and Planning

1. Review the corporate strategic, business, and computer architecture plans, if applicable, to determine if the architecture plan supports the strategic and business goals. The business plan should reflect goals in support of the strategic plan, and any differences between these plans should be reconciled. If a reconcilement has not been performed, request that management complete one during the inspection. Otherwise, complete the reconcilement.

2. Request (or create) a conceptual overview model to identify the flow of information through the organization. (See SR-95-45, exhibit D.)
3. Evaluate management's conversion planning process by selecting a recently converted or consolidated MIS application for review. This application will be emphasized when completing other sections of the work program.
4. After determining the extent of merger and acquisition activity at the institution, review conversion plans and the methodology for consolidating systems and ascertain their effectiveness.
5. Review a copy of development plans for any significant MIS-related projects. Determine if they address cited MIS weaknesses, meet strategic and business goals of the organization, and are in compliance with established policies.
6. Discuss with executive management any inconsistencies among the business, system architecture, and strategic plans.

Examiners' access to automated databases that include supervisory data on state member banks (SMBs) and bank holding companies (BHCs) has been significantly enhanced. In addition, the increased availability of copiers, fax machines, and personal computers has made it possible for SMBs and BHCs to more easily transfer data to Reserve Banks. As a result, the volume of information on SMBs and BHCs available to examiners in Reserve Bank offices has been greatly augmented, and many inspection activities that have traditionally been conducted in the field can now be completed in Reserve Bank offices.

The option to complete certain inspection activities in Reserve Bank offices has various advantages. For example, examiners' ability to access automation resources, reference materials, and senior staff is much better in the office than on-site. In addition, in completing more activities off-site, Reserve Banks can reduce the burdens of on-site evaluations of SMBs and BHCs. Further, greater reliance on off-site work can allow Reserve Banks to reduce travel-related expenses.

5060.0.1 CONDUCTING INSPECTION ACTIVITIES IN RESERVE BANK OFFICES

Examiners should conduct in Reserve Bank offices all inspection activities that can be efficiently and effectively completed off-site. Activities that may be completed off-site include planning the inspection, reviewing historical information, completing preliminary financial analyses, and preparing certain report pages using data maintained at Reserve Bank offices. For additional information, see SR-95-13 (SUP).

When using this approach, examiners should contact BHCs by letter and ask them to forward to Reserve Bank offices financial and other information to be used in the off-site portion of the inspection. Most information that has traditionally been requested in first day letters and made available to examiners at the start of an inspection should be requested, with the exception of documents such as minute books or bulky printouts that would be inappropriate or impractical to have sent. While it is anticipated that this approach will be preferred to approaches that require a longer on-site examiner presence, BHCs are not required to be inspected under this approach and should be given the option to be inspected using traditional on-site approaches. Given the burdens imposed on BHCs to prepare and mail materials to Reserve Bank offices, Reserve Banks should also offer to pay the shipping costs and give adequate lead time in requesting materials.

In the cases of certain shell BHCs, Reserve Banks are authorized to complete all inspection activities off-site on an every-other-inspection basis. As noted above, however, these BHCs should be given the option to be inspected using the traditional on-site approach. Noncomplex shell bank holding companies (NCSBHCs)[1] with less than $500 million in assets that on their last inspection were rated BOPEC 3 or better may be inspected off-site, subject to the following restrictions.

- If information becomes available to the Reserve Bank in the period between inspections suggesting that the condition of an organization is deteriorating significantly, an on-site inspection should be scheduled or commenced immediately if warranted.
- Deteriorating 3-rated BHCs are excluded and must be inspected on-site.
- When a BHC's lead bank subsidiary is an SMB, the inspection of the BHC should be carried out in the field concurrently with the examination of its lead bank.
- NCSBHCs in the same metropolitan statistical area as the Reserve Bank or its bank supervision staff should be inspected on-site unless there is good reason to do otherwise. Newly formed NCSBHCs or those that have recently undergone a change in control should also be inspected on-site.
- If a BHC is unable to forward the information necessary to conduct an off-site inspection, or if the company is assigned a BOPEC rating of 4 or 5 or is determined to be a deteriorating 3-rated organization as a result of an off-site inspection, an on-site inspection should be scheduled or commenced immediately if warranted.
- Information requested from the NCSBHC should include all information typically requested in a first day letter, as well as copies from the company's general and subsidiary ledgers that document all significant account-

1. Noncomplex shell bank holding companies are those without credit-extending nonbank subsidiaries or debt held by the general public whose condition is predicated almost entirely on the condition of subsidiary banks.

ing entries made since the last on-site inspection, copies of cancelled checks written since the last on-site inspection, copies of the BHC's notes payable and receivable, copies of all agreements between the BHC and its bank subsidiaries, and any other information considered necessary to complete an off-site inspection of the institution.
- Findings on the BHC's condition and compliance with laws and regulations should be conveyed to management by telephone or, if the situation requires, in person at company or Reserve Bank offices. The examiner-in-charge should then complete an inspection report for transmission to the company.

5060.0.2 OFF- AND ON-SITE BHC INSPECTION PROCEDURES—APPENDIX 1

This appendix includes inspection procedures that can be completed in the Reserve Bank's offices and those procedures that should be conducted on-site. A sample first day letter information request form is included.

5060.0.2.1 Activities That Can Be Completed in the Office

Work to be performed in the office in preparation for a bank holding company inspection should include the—

- determination of the scope of inspection,
- completion of financial schedules and certain other pages, and
- review of historical financial and supervisory data leading to preparation of draft financial analyses (for example, parent, subsidiary banks, consolidated entity).

In addition, if centralized management functions (for example, investments, asset/liability management, internal audit, or loan review) are performed by the bank holding company, a preliminary understanding of these functions can be obtained in the office by reviewing policies, reports, and other relevant materials. Further, if the bank holding company has nonbank subsidiaries, the preliminary risk assessment mandated by SR-93-19 (see sections 5010.7.3 and 5010.31) can be performed in the office, based on information submitted by the institution.

5060.0.2.2 BHC Inspection Activities That Should Be Conducted On-Site

The following inspection activities are recommended and should continue to be performed at the bank holding company:

- review of credit and investment files at holding company and nonbank subsidiaries for quality, documentation, and compliance with policy, laws, and regulations;
- in-depth discussions with management;
- verification of selected financial information;
- review of selected tax workpapers, including the review of intercompany tax allocations;
- observation of operations and internal controls;
- collection of follow-up documentation to complete the financial analysis;
- review of documents such as minute books for the holding company and nonbank subsidiaries and bulky printouts that would be inappropriate or impractical to have sent to the Reserve Bank's office;
- exit meetings with management.

5060.0.2.3 Sample Information Request for a Bank Holding Company

Information To Be Mailed to the Federal Reserve Bank

1. Exhibits A through N (See attachment #2, SR-95-13). Also, please assemble applicable workpapers that correspond to reported information for verification on-site.
2. The corporation's current legal-entity and management organization charts, detailing line and staff authority from the chairman of the board through the various division heads.
3. Copies of any strategic planning documents.
4. A copy of the most recent information package provided to the directors in connection with regular board meetings.
5. A copy of any other management reports that summarize the performance of the subsidiary banks.
6. Schedules of internal audits and internal loan reviews for the prior and current year. In addition, please furnish a copy of the most recent management letter provided to the corporation by its external auditing firm and management's formal response.
7. List of consolidated past-due, restructured, and nonaccrual loans and overdrafts; watch-list

report; and any results of internal loan-grading systems.

8. Loan-loss reserve adequacy evaluation (consolidated and lead bank). Include the most recent calculation for assessing the adequacy of the loan-loss reserve based on the organizations's internal methodology.

9. Risk-based capital analysis (consolidated and lead bank) for the most recent quarter-end and two prior year-ends, including workpapers. Break out guaranteed loans and loans secured by certificates of deposit. Also include the total amount and proportionate guarantee of each loan guaranteed by such entities as the FmHA, SBA, and VA.

10. Current and upcoming year's budgets (consolidated and lead bank).

11. A copy of any capital, dividend, or cash-flow plans or projections.

12. Most recent internal consolidated interest-rate-sensitivity analysis and liquidity analysis.

13. Parent-company consolidating entries and consolidated comparative financial statements as of the most recent quarter-end.

14. Parent-company-only comparative financial statements as of the most recent quarter-end.

15. The parent company's trial balance as of the most recent quarter-end.

16. Details of any items included in parent-company ''other'' assets, liabilities, income, or expense, which cannot be readily identified from the most recent quarter-end trial balance.

17. A summary of insurance coverage for the parent company and its subsidiaries. Please include a copy of the cover pages of each policy, along with the amount of coverage and expiration date. In addition, also indicate the most recent board approval of such coverage.

18. A detailed schedule of all consolidated borrowings as of the most recent quarter-end. Include the average interest rate paid on each type of borrowing.

19. For the parent company only, please provide the following information on all outstanding obligations: (a) amount outstanding, (b) lender (if publicly held, only note holders of greater than 10 percent), (c) origination and maturity dates, (d) interest rate and payable dates, (e) principal repayment schedule, and (f) reason for incurring debt.

20. A schedule of the fiduciary holdings of the parent company's stock and convertible debt by the parent's subsidiaries. Indicate the degree of investment authority the respective trust departments have over these shares.

21. Copies of all intercompany management and service agreements along with (1) the names of the staff members responsible for the administration of these activities and (2) documentation showing the basis of the assessments.

22. Litigation letter from the holding company's attorneys relating to the status of all lawsuits in which the holding company or its subsidiaries is named defendant. If none, please submit a letter from an officer of the holding company indicating such.

23. A complete copy of all written policies that have been amended or adopted since the previous FRB inspection.

24. A copy of the bank's most recent Report of Condition and Income (call report), including the corresponding internal balance sheet and income statement (daily statement) for the lead bank.

25. Daily statement for the lead bank as of the inspection date.

26. Copies of any ''key man'' or ''split-dollar'' life insurance policies held at the holding company or the subsidiaries.

27. Copy of compensation agreements with subsidiary bank personnel who sell credit-related life insurance for the holding company, along with any tie-in policies, if applicable.

28. Copy of any other compensation arrangement either at the holding company or between the holding company and the subsidiary banks.

29. Most recent market-rate survey for local deposits at the lead bank.

30. For all nonbank subsidiaries, please provide (a) financial statements for the most recent quarter-end; (b) strategic plans; (c) directors' monthly reports; (d) internal audit reports; and (e) a trial balance of all credits, delinquency reports, nonperforming reports, and watch-listed loans for credit-extending subsidiaries.

Information To Be Provided at the Holding Company

31. Access to all written policies pertaining to specific operational areas (for example, due diligence/acquisitions, lending, funds management, tax allocation, and dividends).

32. Access to internal audit and internal loan review reports and workpapers.

33. Minutes of meetings of the board of directors, shareholders, and any committees. Please include a list of committees and their members, and fees paid to directors.

34. Holding company articles of incorporation and by-laws.

35. Stock register.

36. Access to federal tax returns filed since the most recent FRB inspection, along with workpapers. In addition, provide schedules of intercompany tax allocations for the corresponding periods, including projected allocations.

37. Access to parent company accounting records such as ledgers, journals, and check registers.

38. Access to monthly account-analysis statements for any parent company transaction accounts held at a subsidiary bank.

39. For all nonbank subsidiaries, please provide (a) directors' minutes; (b) annual budgets and cash flow projections; (c) checking account statements and check registers and/or cash receipts and disbursements registers; (d) a listing of directors and officers; and (e) access to credit policies and credit files for all nonbank credit-extending subsidiaries.

40. Access to due-diligence reports and workpapers and assimilation plans.

41. Any available information on local economic conditions.

5060.0.3 PROCEDURES FOR IMPLEMENTING OFF-SITE INSPECTIONS FOR CERTAIN SHELL BHCS—APPENDIX 2

This appendix includes procedures for implementing the program authorizing off-site inspections for certain shell BHCs. Listed below are general procedures that can be followed in implementing the program for off-site inspections of certain noncomplex shell bank holding companies (NCSBHCS). Sample documents are included that can be used in implementing the program, including examples of correspondence with eligible bank holding companies and a sample first day letter information request form.

5060.0.3.1 General Procedures for Off-Site Inspections

In implementing the program, Reserve banks should conform to the following procedures:

1. Senior management of bank holding companies should be notified before or early in the calendar year if their company qualifies for a full off-site inspection. They should also be informed that they may opt out of the off-site process and that, even if they choose to participate, the Reserve Bank may conduct the inspection on-site if conditions change or if, at some point during the year, examiners will be traveling to the company's vicinity to carry out other activities.

2. When the Reserve Bank is ready to conduct the off-site inspection, the holding company should be contacted by telephone, as well as by letter. An information request form should be attached to the letter.

3. After assigned examiners have reviewed information forwarded by the company, additional information may be requested by telephone or other means if deemed necessary. Once all necessary information has been received, the designated examiners should commence the off-site inspection.

4. Findings of the inspection should be conveyed to company management by telephone or, if the situation requires, at company or Reserve Bank offices.

5. The examiner-in-charge should then complete an inspection report for transmission to the company.

SAMPLE LETTER

Date:

BHC Official
BHC Name
Address

Dear BHC Official:

This year, the Federal Reserve Bank of New York will conduct off-site inspections of certain bank holding companies. Your company will be inspected during 19X0 and presently qualifies for an off-site review by our office.

As part of our off-site program, you will receive an information request form which must be completed and returned to the Reserve Bank. The Reserve Bank will reimburse you for postage expenses. The form requires responses to several questions, as well as submission of copies of certain holding company financial documents. Our examiners will review the information, complete their analysis, and discuss their findings with management, either by telephone conference or, if necessary, at the offices of your bank holding company. Following the off-site review, holding company management will receive a written report which will include the following:

- a description of the scope of the inspection;
- the examiner's presentation of the financial condition and performance of the parent company and the subsidiary bank;
- an evaluation of the company's compliance with laws and regulations; and
- the examiner's comments, conclusions, and recommendations.

We have found that the off-site inspection program has proved attractive to many banking organizations. However, participation is not mandatory. Therefore, if you do not wish to participate, please sign and mail the enclosed form by DATE. We do want to make it clear, however, that while we plan to conduct an off-site review of your company if you accept this proposal, we still may conduct an on-site inspection if conditions change or if examiners are otherwise in your vicinity.

Should you have any questions concerning the off-site inspection program, please contact OFFICE STAFF MEMBER at (800) ___-____, extension ____.

Sincerely,

Officer

State: ______________________

Signed: ______________________

Title: ______________________

SAMPLE LETTER

Date:

BHC Official
BHC Name
Address

Dear BHC Official:

Pursuant to our telephone conversation of (Date), an off-site inspection of (BHC Name), will be conducted by our office. Please respond to each item of the information request form attached and complete the enclosed schedules. Please be aware that all items submitted for review will be retained by our office and not returned to the company. Therefore, it is advisable to submit copies of records rather than originals. Upon receipt of the items requested, we will reimburse your bank holding company for the postage expense.

In order for us to use the off-site program, you must submit a complete response to this information request no later than (Date). If we are unable to satisfactorily resolve any issues arising from your response to this request, or if the information contained in your response is substantially incomplete, we will schedule the company for an on-site inspection.

Upon review of the information submitted, we will contact you to schedule a meeting with our examiners. If you have any questions concerning the inspection process or the preparation of your responses, please contact (Office Staff Member) at (800) ___-____, extension ____.

Sincerely,

SAMPLE INFORMATION REQUEST FORM

BHC
OFF-SITE INSPECTION CONDUCTED AS OF
DATE __/__/__

INFORMATION REQUEST FORM

Please submit or provide responses to the following (if non-applicable, answer N/A):

1. Statements for the most recent quarter and the two latest fiscal years:

   A. Parent Company -- Balance Sheet

   B. Parent Company -- Income Statement

   C. Parent Company -- Statement of Changes in Stockholders' Equity

   D. Bank -- Reports of Condition and Income (most recent quarter only)

   E. Reconciliation of the parent company's "Investment in Bank" account to the subsidiary bank's "Stockholders' Equity" as reported in the Reports of Condition

2. The bank's daily statement and income and expense statement dated __/__/X0.

3. Projected cash flow worksheet for the year 19X1 (see attached form).

4. Excerpts from the company's general ledger and subsidiary ledgers containing all significant accounting entries since __/__/__.

5. Detail of any "other assets" or "other liabilities" accounts for the company, as well as "other income" or "other expense" items, presented in financial statements requested above IF the amounts exceed $500.

6. Details on any liabilities, contingent or otherwise, not appearing in the financial statements.

7. A copy of the company's bank statements and its check register and/or cancelled checks issued since __/__/__.

8. A copy of any notes payable and/or receivable of the bank holding company (including a copy of any related loan agreements) if they have been put in place or amended since the last inspection.*

*The last inspection of __(BHC Name)__ was conducted on __(Date)__.

SAMPLE INFORMATION REQUEST FORM—Continued

- 2 -

9. A copy of any agreements originating since the last inspection between the company and the bank, between stockholders, or between the bank holding company and the stockholders.

10. A list of changes of specific services performed by the holding company for the bank or for any other company since the last inspection. Also indicate the method for computing fees, provide copies of any relevant agreements, and provide documentation supporting any management/service fee assessments.

11. For any changes to the parent company's investments in stocks of companies OTHER THAN subsidiaries, a list of the (1) date of acquisition/sale, (2) number of shares acquired/sold, (3) resulting percentage ownership, and (4) nature of business engaged in by the subject company.

12. A copy of any internally prepared reports of problem loans and nonperforming assets for the banking organization.

13. A list of any stock issuances or redemptions by the company since the last inspection, including the issue/redemption date and price. Also, list all stockholders and their percentage interest in the holding company as of __/__/__.

14. A statement of the date and amount of any capital injections into the bank since the last inspection.

15. A copy of the minutes of all shareholders'/directors' meetings for the company held since the last inspection.

16. For each director of the holding company, provide his or her (1) date of birth, (2) date first elected to the board, (3) position in the bank holding company, (4) position in the bank, (5) principal occupation if different than bank or bank holding company officer, (6) ownership percentage in other financial institutions, and (7) positions in other financial institutions.

17. A statement of any material litigation affecting the company or the bank.

18. A list of all tax transactions since __/__/__. These transactions would include those between the bank and the holding company as well as any transactions with the tax authorities. (See attached example.)

19. A copy of the last two years' federal and state income tax returns, including any amendments.

20. A copy of your accountant's workpapers showing the calculation of the holding company tax benefit or liability for the last two years.

SAMPLE INFORMATION REQUEST FORM—Continued

- 3 -

21. If the parent company filed for a tax loss carryback in the last two years, provide documents filed with the IRS and related prior-year tax returns.

22. A copy of the tax sharing agreement between the bank holding company and its bank subsidiary if amended or redated since the last inspection.

23. The date of the last IRS audit of the bank holding company's tax returns, an identification of the tax periods covered in the audit, and an indication of whether any assessments or refunds remain unsettled.

24. A copy of the bank's current year budget and operating projections, if available.

25. If the subsidiary bank maintains a correspondent balance at any creditor bank of the holding company, copies of (1) the monthly analysis of the account provided by the correspondent for the last 12 months, (2) any agreement whereby the loan to the holding company is contingent on the subsidiary bank maintaining such a balance, and (3) an explanation if the balances maintained by the subsidiary bank exceed the level required for services received.

26. If any Employee Stock Ownership Plan (ESOP) owns stock in the holding company, provide copies of (1) the ESOP plan and trustee agreement; (2) the ESOP's current balance sheet; (3) the independent appraisal used to determine the value of the holding company stock purchased by the ESOP; (4) any note payable, security agreement, loan agreement, and guarantees. Also provide (1) the date the plan was accepted by the IRS; (2) a description of the ESOP's current investments, including the date they were purchased and their cost; (3) the names of the individuals who have the power to vote the ESOP's stock; (4) a list of individuals having the power to make investments for the ESOP; and (5) a list of the beneficiaries of the ESOP.

27. Copies of the articles of incorporation and by-laws for the bank holding company, if amended since the last inspection.

28. If the holding company is selling insurance, list the (1) licensed agents employed by the company; (2) compensation received by each agent; (3) method for determining compensation; (4) a description of how customers of the bank are informed that they are not obligated to purchase insurance from the holding company in order to obtain credit; and (5) a breakdown of insurance accounts receivable, past due more than 90 days.

SAMPLE INFORMATION REQUEST FORM—Continued

- 4 -

29. If the subsidiary bank is providing the holding company with either personnel or facilities for the sale of insurance or any noninsured investment products, a statement indicating whether the subsidiary bank is reimbursed for its expenses. If the bank is reimbursed, a description of the method used to determine such amounts. Indicate when this reimbursement method was approved by the respective boards of directors.

30. If the holding company is involved in the sale of any non-insured investment products such as annuities or mutual funds, describe the program including any arrangements that involve the use of third-party brokers. If the holding company receives any share of the related commissions or lease income or if employees of the holding company or a nonbank subsidiary of the holding company are involved in the program, please describe.

31. Copies of the dividend policies of the holding company and the subsidiary bank. If no written policy exists, provide a description of the methods used to determine the amount of dividends paid by the bank holding company or any of its subsidiaries.

32. The dates and amounts of dividends paid by the subsidiary bank since the last quarter-end.

33. A description of any changes made to the holding company’s audit and/or credit review programs.

34. Details of any directors and officers liability insurance maintained by the organization or indemnification provisions adopted by the bank or bank holding company.

35. For banker’s blanket bond and excess fidelity bond coverage, please provide (1) name of surety; (2) form number; (3) primary and excess amount of coverage; (4) expiration date; (5) name of insured; (6) an indication of whether all officers and employees of the holding company, bank, and any nonbank subsidiaries are covered; (7) the date the insurance coverage was last approved by the bank holding company’s board of directors and the bank’s board of directors; and (8) a description of how insurance premiums are allocated among the entities of the organization.

36. Details of any significant transactions since __/__/__ not already described in responses to the above questions.
